Calscience Environmental Laboratories, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

5 Chain of Custody/Sample Receipt Form 8

Calscience Environmental Laboratories, Inc.

Work Order Narrative

ACCREDITED IN ACCORDANCE WITH nelac

Condition Upon Receipt:

Samples were received under Chain of Custody (COC) on 05/22/2013. They were assigned to Work Order 13-05-1573.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with an immediate holding time (HT </= 15 minutes --40CFR-136.3 Table II footnote 4), is considered a "field" test and reported samples results are not flagged unless the analysis is performed beyond 24 hours of the time of collection.

Return to Contents

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Additional Comments:

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Subcontract Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

RPD - Relative Percent Difference , CL - Control Limit

Calscience Environmental Laboratories, Inc.

Glossary of Terms and Qualifiers

ACCREDITED IN ACCORDANCE WITH nelac

Work Order Number: 13-05-1573

Qualifier	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to matrix interference. The associated LCS and/or LCSD was in control and, therefore, the sample data was reported without further clarification.
4	The MS/MSD RPD was out of control due to matrix interference. The LCS/LCSD RPD was in control and, therefore, the sample data was reported without further clarification.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to a matrix interference effect. The associated batch LCS/LCSD was in control and, hence, the associated sample data was reported without further clarification.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
ME	LCS/LCSD Recovery Percentage is within Marginal Exceedance (ME) Control Limit range.
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

For any analysis identified as a "field" test with a holding time (HT) </= 15 minutes where the sample is received outside of HT, Calscience will adhere to its internal HT of 24 hours. In cases where sample analysis does not meet Calscience's internal HT, results will be appropriately qualified.

Dear Ms. Periat,

Chemical analysis of the samples referenced above has been completed. Summaries of the data are contained on the following pages. Sample(s) were received under documented chain-of-custody. US EPA protocols for sample storage and preservation were followed. Testing procedures comply with the 2003 NELAC and TNI 2009 standards. Laboratory results relate only to the samples tested. This report may be freely reproduced in full, but may only be reproduced in part with the express permission of Kiff Analytical, LLC. Kiff Analytical, LLC is certified by the State of California under the National Environmental Laboratory Accreditation Program (NELAP), lab # 08263CA. If you have any questions regarding procedures or results, please call me at 530-297-4800.

Sincerely,

Troy G. Turpen

SUBJECT: UNOCAL 76 STATION #6390 AT 402 SOUTH DELAWARE STREET, SAN MATEO, CALIFORNIA

Dear Mr. Hunter:

Antea Group has uploaded the following documents to the State GeoTracker (GeoTracker) database: 1) subsurface vapor sampling report dated May 29, 2014; 2) tetrachloroethene (PCE) source evaluation report dated October 8, 2014; and 3) groundwater monitoring report dated October 8, 2014. Thank you for the attention to project management demonstrated by these reports. The following comments are based on San Mateo County Groundwater Protection Program (GPP) staff review of these reports and the project file.

PCE Source Evaluation Report

Section 1.1 states the fuel release at the subject site was caused by activities related to a well being drilled next to one of the USTs. This was not stated in November 1992 UST removal report which simply states a 9-inch-long crack was observed in the super unleaded fuel UST after it was removed (no mention of drilling causing the rupture or the release). Moreover, our permit records indicate the oldest drilling permit issued for the subject site was for MW-1 in May 1994. Please verify your information if it will be used in future documents.

Section 2.2.3 proposes to re-designate MW-20 as a deep well based on the PCE concentrations in the groundwater samples from this well and reportedly, the deeper groundwater occurrence in this well. GPP staff do not support this proposal. Any decision to re-classify MW-20 as a deep well should be solely based on the portion of the saturated zone monitored. The groundwater elevations in MW-15B and MW-20 are very similar on the three dates in which both wells were gauged (2.20 versus 1.31 on July 8, 2013; 0.79 versus 0.80 on January 28, 2014; and 0.37 versus 0.41 on August 4, 2014). In addition, PCE has been reported in saturated zone soil <20 feet below grade (Borings SB-4, SB-6, SB-7).

Simple inspection of the sub-slab vapor sampling results suggest some of the PCE contamination may have originated from the property at 521 E. 5th Avenue. However, the reported uses of this property are not associated with PCE use and the PCE concentrations in the groundwater samples

from recent upgradient well MW-23 are similar to those collected from the most impacted wells near the subject site (MW-7, MW-12B, MW-13B, and MW-15B). Moreover, Figure 3 indicates any sanitary sewer discharge from Wardrobe Cleaners at 335 East Fourth Avenue and possibly the former Family Cleaners facility at 412 East Third Avenue would flow past sample localities SS-1 and SP-7, MW-20, MW-12B, and MW-15B (most of the field points containing elevated PCE concentrations). Furthermore, our Certified Unified Program Agency (CUPA) inspection records indicate PCE was used at Wardrobe Cleaners (no CUPA records exist for Family Cleaners) and Appendix E in the report indicates Wardrobe Cleaners has operated since at least 1954. Hence, at this time, it appears more likely the PCE contamination originated from Wardrobe Cleaners. Therefore, at this time, GPP staff will not require the responsible party for the fuel release at the subject site to perform additional investigation of the PCE release. In addition, we will inform the DTSC that Wardrobe Cleaners does not appear to have provided correct information to the DTSC and we will request Wardrobe Cleaners to voluntarily assess the extent and impact of the PCE.

Subsurface Vapor Sampling Report

Section 3.0 considers the results from the January 14, 2014, sub-slab vapor sampling of SS-1 through SS-3 as abnormal and Section 5.0 suggests batch contamination of the Summa sampling containers may have affected the representativeness of the samples. GPP staff do not consider these conclusions justified because no trip blank sample was analyzed and the samples containing the greatest benzene concentrations (SS-2 and SS-3) were collected from the locations closest to the heart of the dissolved-phase benzene plume. Because limited subsurface vapor sampling data is available and the benzene concentrations in the January 14, 2014, samples from SS-2 and SS-3 exceed the Regional Water Quality Control Board indoor air benzene Environmental Screening Level after applying a default DTSC attenuation factor of 0.05, GPP staff consider it prudent to collect additional sub-slab vapor samples from SS-2 and SS-3 in January 2015 for analysis of gasoline compounds. Please upload to GeoTracker by **April 30, 2015**, all electronic files required by California Code of Regulations Title 23, Division 3, Chapter 30, including a report detailing and justifying the methods, findings, conclusions, and recommendations of the investigation.

GPP staff concur the PCE concentrations reported in sub-slab vapor samples SS-1 and SS-2 indicate a potential PCE inhalation risk to the occupants of the building at 521 East 5th Avenue. Additional corrective action will be necessary to address this issue. However, as previously stated, we will not at this time require the responsible party for the fuel release at the subject site to perform this work.

The report recommends removing the sub-slab vapor probes. We cannot approve this request at this time because of the required additional sampling. Please note, even when subsurface vapor sampling for gasoline compounds is no longer necessary, it may be prudent to leave the probes in-place and transfer their ownership to the property owner and eventually the responsible party for assessment of the PCE impact.

The Electronic Data File (EDF) for the sampling of SS-4 on January 21, 2014, has not been uploaded to GeoTracker as required by State regulations. In addition, GPP staff denied EDFs #1604, 3607, and 7898 (first four numbers listed) because they contained incorrect field point names. Please immediately upload correct versions of these files to complete the vapor sampling task.

Groundwater Monitoring Report

The workplan dated October 12, 2013, recommended additional monitoring wells downgradient of MW-21. GPP staff did not consider this work necessary at the time, but now consider it appropriate to install at least one well on South El Dorado Street given the concentrations of TPHg, ethylbenzene, and naphthalene reported in the groundwater samples from MW-21. It appears a well in front of 514 S. El Dorado Street will satisfy this objective. Please upload to the State GeoTracker database by **April 30, 2015**, all electronic files required by California Code of Regulations Title 23, Division 3, Chapter 30, and discuss the methods, findings, conclusions, and recommendations of the downgradient groundwater investigation in the previously required vapor sampling report.

Please contact me at (650) 372-6292 or at dmilano@smcgov.org if you have any questions.

PCE Source Evaluation Report

76 Service Station No. 6390
402 South Delaware Street, San Mateo, CA
San Mateo County Groundwater Protection Program,
Case No. 110069

1.0 INTRODUCTION

Antea®Group has prepared this *PCE Source Evaluation Report* to summarize data collected during investigations of tetrachloroethylene (PCE) at 76 Service Station No. 6390, located at 402 South Delaware Street, San Mateo, California (**Figure 1**). The San Mateo County Groundwater Protection Program (GPP) has previously indicated that the site's former waste oil tank could be a potential contributor to the regional dissolved phase PCE plume. Historical correspondence from the GPP related to PCE at this site is included as **Appendix A**. The following report provides an overview of PCE occurrence at the site as it relates to the open case in support for discontinuation the affiliation between PCE and the site's open Leaking Underground Storage Tank (LUST) case No. 110069.

1.1 Site Description and Location

The site is a rectangular property, currently occupied by an active 76 Service Station, on the south corner at the intersection of East Fourth Avenue and South Delaware Street in San Mateo, California. The station is located approximately one mile west of San Francisco Bay, at an elevation of approximately 20 feet above mean sea level (**Figure 1**). The site facilities currently include two, fuel underground storage tanks (USTs) located in a common pit in the southeast portion of the property, three product dispenser islands, and a station building (**Figure 2**). The USTs were installed in August 1992 during station upgrade activities. A 550-gallon waste oil UST formerly located behind the station building was also removed during the site upgrades in 1992 (Stantec 2008). A complete summary of the site's history is presented as **Appendix B.**

The site is located in a mixed commercial and residential area. South Delaware Street and a Jiffy Lube facility (407 South Delaware Street) bound the site to the northeast while East Fourth Street and commercial buildings bound the site to the northwest. A parking lot for a Taco Bell restaurant (500 East Fourth Avenue) bounds the site to the southwest, and a Legal Aide of San Mateo building (521 South Delaware Street) and parking area bound the site to the southeast (**Figure 3**).

The site's open LUST case was opened on September 10, 1992 in response to a release caused by activities related to a well being drilled alongside one of the former fuel USTs. The Unauthorized Release Report named unleaded gasoline as the substance involved with the release. To Antea Group's knowledge, PCE nor waste oil have been named as additional released substances in association with this case.

There are seven existing or former gasoline service stations within ¼-mile of the site. The nearest residence is southwest of the site at 411 South Claremont at approximately 50-feet southwest of the site. An apartment building is located at 603 East Fifth Avenue at approximately 75-feet northeast of the site.

Investigations at this site have included the advancement of 18 soil borings, and the installation of one temporary well, three vapor wells, four sub-slab vapor wells, and 24 monitoring wells, 17 of which are still in operation (**Table 1**). The other seven monitoring wells were destroyed between 2007 and 2013. Soil boring and monitoring well construction details are included as **Table 1**. Regional and site specific hydrogeology is discussed in **Appendix B** and geologic cross sections of the site are available as **Appendix C**.

1.2 PCE - Regulatory Summary

Investigating the source of PCE in groundwater was first recommended by Secor International Inc. (Secor) in their *Offsite Assessment Report* dated February 27, 2008. Although the GPP did not consider investigation necessary at that time, subsequent data from wells MW-12B and MW-13B including grab groundwater samples from SB-1 through SB-11 and elevated PCE levels in MW-13B and MW-12B led the GPP to consider the site as a potential contributing source. It is Antea Group's understanding that the GPP's primary concern was an apparent increase in PCE concentrations in downgradient grab groundwater samples. Since 2009, the GPP has requested the following tasks be performed for PCE source evaluation:

- Identify former and existing use of the parcels bounded by East Fourth and Fifth Ave and South Delaware Street and South Claremont Street;
- Assess origin of PCE in regard to historical property uses;
- Analyze all groundwater samples for halogenated volatile organic compounds (HVOCs);
- Install a groundwater monitoring well between the former waste oil tank and the station building;
- Install a deep groundwater monitoring well (MW-23) to clarify contribution of PCE from the site, and;
- Evaluate sub-slab vapor at 521 and 603 East 5th Avenue and onsite soil gas for PCE.

Antea Group has completed each request from the GPP. Findings from these tasks indicate that offsite sources exist, and the site is not a likely contributing source of PCE as discussed below.

2.0 PCE OCCURRENCE AND SOURCE

The following is an evaluation of PCE occurrence in soil, groundwater and vapor based on data collected over the course of the site's history.

2.1 PCE in Soil

Historically, PCE was reported in soil sample WO1, collected during the waste oil tank removal in August 1992 from approximately 8 feet below ground surface (bgs) at a concentration of 0.0064 milligrams per kilogram (mg/kg).

Because this value is significantly below the Tier 1 environmental screening level (ESL) for PCE, GPP concluded that the site was not the source of PCE in a letter dated January 30, 2008 (**Appendix A**). There were no detections of gasoline range organics (GRO) or diesel range organics (DRO) in this sample. A confirmation soil sample SB-8 was collected near the location of WO-1 in 2012. The only PCE detections in samples from SB-8 were from depths below 23.5 feet, at concentrations up to 0.013 mg/kg. Antea Group concluded that PCE detections in SB-8 soil were influenced by dissolved phase concentration interference, since samples were collected below the water table in the vicinity of the deep groundwater bearing zone.

The maximum concentration of PCE reported in soil samples associated with the site was 0.049 mg/kg which was detected at 25 feet bgs in SB-7, within the deep groundwater bearing zone. Concurrently, GRO concentrations declined around this depth from 4,900 mg/kg at 20 feet bgs to 0.43 mg/kg at 25 feet bgs. PCE was not detected in the sample from 20 feet bgs in SB-7. PCE has not been reported in soils shallower than 15 feet bgs since the initial detection in the 1992 soil sampled collected (WO-1). PCE concentrations are primarily reported in soils between 20 to 30 feet bgs, within the PCE impacted deep groundwater zone.

In 2011, Antea Group performed a PCE Source Evaluation which included the advancement of soil borings both upgradient and downgradient of the site. PCE was detected in soil samples upgradient of the site in soil borings SB-1, SB-4, and SB-5, and downgradient of the site in soil borings SB-6 and SB-7 at depths ranging between 15 and 40 feet below grade. No PCE detections were reported above the Regional Water Quality Control Board (RWQCB) Tier 1 ESL of 0.55 mg/kg.

Historical soil analytical data are presented as **Table 2**.

2.2 PCE in Groundwater

Table 2.2.1 summarizes the PCE and GRO detections in shallow and deep groundwater wells from the January 2014 ground water monitoring event.

Table 2.2.1

Sample ID	Date Sampled	GW Elevation (feet)	PCE (µg/L)	GRO/Gasoline Hydrocarbons (µg/L)
MW-4	01/28/14	1.08	28	300/230
MW-6	01/28/14	1.20	<2.5	15,000/--
MW-7	01/28/14	1.36	110	260/<50 a,b
MW-8	01/28/14	1.27	16	80/<50 a
MW-9	01/28/14*	--	--	--
MW-10R	01/28/14	0.89	<15	56,000/--
MW-12B	01/28/14	0.67	110	280/<50 a
MW-13B	01/28/14	1.19	140	330/<50 a
MW-14B	01/28/14	1.17	16	52/<50 a
MW-15B	01/28/14	0.79	140	320/<50 a

MW-17B	01/28/14	1.40	14	<50/--
MW-18	01/28/14	1.14	<2.5	22,000/--
MW-19	01/28/14	1.06	20	720/--
MW-20	01/28/14	0.80	160	370/<50 a
MW-21	01/28/14	0.65	<0.50	15,000/--
MW-22	01/28/14	1.30	1.2	<50/--
MW-23	01/28/14	1.70	100	260/<50 a
MW-24	01/28/14	1.03	1.2	<50/--

a = Gasoline Hydrocarbon analysis was performed on samples where the GRO primarily contained compounds not found in typical gasoline. All other values in this column are traditional GRO values. The parameter 'Gasoline Hydrocarbons' was calculated by adding up the chromatographic peaks between hexane and dodecane (C6 to C12), subtracting the non-gasoline compounds (primarily Dichloroethene, Trichloroethene, and Tetrachloroethene), and comparing against a gasoline calibration curve. The calculation was also performed on MW-4 for comparison on a sample where the GRO did not primarily contain compounds not found in typical gasoline.

b = Repeat analysis of GRO yielded inconsistent results. The concentrations appear to vary between the bottles. The highest valid result is reported.

*= Well reported as dry.

µg/L Micrograms per liter

Shallow Groundwater Monitoring Well

Deep Groundwater Monitoring Well

2.2.1 Shallow and Deep Water Bearing Zones

Contaminants in groundwater beneath the site are divided between the shallow and deep groundwater bearing zones, as shown on the table above and evidenced by the following:

- Two coarse grained water bearing zones have been observed beneath the site, separated by a thin clay layer which is semi-continuous across the site.
- The shallow coarse grained water bearing zone is not continuous to all parts of the site and vicinity. In these locations, groundwater is typically not observed until the deep zone is reached.
- PCE and associated compounds are reported at concentrations up to two orders of magnitude higher in deep groundwater well samples than in shallow well samples.
- GRO and associated compounds are reported primarily in shallow groundwater wells.
- GRO is reported in deep well samples, however those detections are typically due to PCE and other chlorinated compounds such as trichloroethene (TCE). See the case narrative in January 2014 laboratory report (**Appendix D**) and results summary in Table 2.2.1.
- Separation of hydrocarbon and solvent concentrations between the two water zones suggests that little to no exchange is taking place between the two zones, and that the sources of hydrocarbons and solvents are separate.
- PCE concentrations in deep well MW-23, located upgradient from the site, are on the same order of magnitude as those downgradient of the site.

2.2.2 PCE in Deep Groundwater Zone

The GPP has stated in previous correspondence (**Appendix A**) that the concentrations of PCE increase in deep groundwater downgradient of the site. This conclusion was based on relatively low PCE concentrations in grab groundwater samples from upgradient borings, and the initial samples from downgradient deep wells MW-13B and MW-12B. After initial sampling events, MW-13B and MW-12B have equalized at lower concentrations, which are on the same order of magnitude with those detected in upgradient well MW-23.

Perceived "increased" concentrations in downgradient deep wells are typically on the same order of magnitude as "lower" concentrations in upgradient wells, and could be due to a difference in screen interval vs. intersecting water bearing strata or natural spatial variation. Concentrations of PCE do appear to increase to the south of the site, which may indicate that the regional PCE plume core is slightly south of the site, or has a contributing source to the south (i.e. sewer lines in Delaware Street).

2.2.3 Well MW-20 Re-Designation

During installation, well MW-20 was intended to be screened within the shallow aquifer; however, GRO and PCE detections in MW-20 have consistently been similar to those in deep screened wells. GRO detections in MW-20 are qualified from the laboratory as being the result of the elevated presence of chlorinated compounds, and PCE concentrations are on the order of those in nearby deep screened wells. Additionally, groundwater was first observed in MW-20 at 20 feet bgs, which is deeper than first encountered water at nearby deep well MW-15B. Due to these observations, Antea Group has re-designated MW-20 as a deep groundwater well.

If there were an onsite source of PCE, shallow wells MW-6 and/or MW-18 (directly downgradient of station building and USTs) should demonstrate elevated PCE levels. Both wells demonstrate elevated levels of gasoline related constituents associated with the site's documented gasoline release, yet they do not contain PCE concentrations above the LRL.

Historical groundwater analytical results are included as **Table 3**.

2.3 PCE in Vapor

The highest concentrations of PCE (up to 2,200 micrograms per cubic meter [ug/m^3]) in soil gas vapor were reported in samples collected from sub-slab point SS-1 located at 521 East Fifth Avenue, which neighbors the site to the southeast (**Table 4**). These elevated concentrations were not corroborated by vapor samples collected from soil gas well VP-1 (up to 19 ug/m^3), which is located onsite between the station building and SS-1. Samples collected from VP-1 demonstrated levels of PCE several orders of magnitude less than PCE at SS-1. Additionally, soil gas well VP-3 is located immediately downgradient of the entrance to the station's mechanics bays, but only 36 ug/m^3 of PCE was detected in this vapor well during the most recent sampling event in January 2014. These results indicate that elevated concentrations of PCE in vapor are limited to 521 East Fifth Avenue and do not extend

onsite. If the site were a source of vapor at 521 East Fifth Avenue, concentrations would be expected to increase toward the site.

The building at 521 East Fifth Avenue has been used by a number of businesses in the past. Historically, it has been a stereo shop, grocery store, and a law office. Although none of the identified previous businesses at 521 East Fifth Avenue are considered to be associated with PCE use, it is conceivable that a non-routine use of PCE within the building in the past could have contributed to the localized PCE vapor concentration in SS-1. If this concentration were due to the regional groundwater PCE plume, Antea Group would expect similar concentration in SS-2, also located within 521 East Fifth Avenue.

3.0 POTENTIAL OFFSITE PCE SOURCES

A parcel search was performed in 2008 by Stantec and a Sanborn insurance map search was performed by Delta (now Antea Group) in 2009 to identify any former businesses or property uses which may have contributed to a PCE release. This information is available in the *Potential Tetrachloroethylene (PCE) Source Evaluation Report* dated July 28, 2011.

Several upgradient potential PCE sources have been identified through a web based search and through GeoTracker. Additionally, a utility survey was conducted to review alignment of sanitary sewers in the area. The following sections present these findings.

3.1 Wardrobe Cleaners

In September 2003, the Department of Toxic Substances Control (DTSC) completed a Site Screening Form for Wardrobe Cleaners located at 335 East Fourth Street (**Figure 3**). In this site summary form, the DTSC states that PCE was used on a daily basis and that approximately 16 gallons of waste PCE was generated monthly and that dry cleaning operations began at the site in 1995. However, Wardrobe Cleaners was actually opened at this location in 1954, several decades earlier than the DTSC investigation indicated (see **Appendix E**). Wardrobe Cleaners held a permit to operate with the San Mateo County Environmental Health Department (SMCEH) and the Bay Area Air Quality Management District. Possible subsurface contamination and offsite contaminant migration via groundwater were identified as potential risks in the summary form. Also included in the summary form was a property schematic showing the locations of the dry cleaning machine, boiler room and chemical storage area with respect to surrounding streets. The summary form recommended a Preliminary Endangerment Assessment to determine if hazardous substances had been released.

On April 15, 2005, the DTSC issued a No Action Determination for the site, stating that the DTSC had received a response from the property owner stating that all dry cleaning operations had taken place offsite. Therefore, the

DTSC concluded that the likelihood of a release from the property was minimal, and that no further action was required.

Antea Group is puzzled as to why the DTSC made this conclusion, since two years prior they had identified permits, specific PCE generation amounts, and a site map showing former dry cleaning equipment at their current address. Antea Group believes that the former site operations are a likely source of the regional PCE plume. Wardrobe cleaners is located approximately 560 feet east-southeast of the site, and is now an ''eco-friendly'' dry cleaner with cleaning operations occurring on site.

3.2 Other Upgradient Dry Cleaners

Additionally, the following upgradient dry cleaners are not associated with a current or former environmental case:

- Family Cleaners – 412 East Third Ave – 550 feet west-northwest of site. Family Cleaners appears to be a conventional dry cleaner (**Figure 3**).
- R NU IT Cleaners – 200 East Second Ave – 1,300 feet west of site. According to Envirostor, the dry cleaning business operated since 1985. No documents are filed for the site, and the status is listed as "Evaluation." Blue Sky Cleaners currently operates the business and is an "organic" dry cleaning facility.
- San Mateo Cleaners- 507 South B Street - 850 feet southwest of the site. San Mateo Cleaners appears to be a conventional dry cleaner.
- Blue Ribbon Cleaners- 306 East Fifth Ave - 800 feet southwest of the site. Blue Ribbon Cleaners appears to be a traditional dry cleaner (**Figure 3**).

3.3 Utility Survey

Sanitary sewers are well documented conduits for PCE vapor transport. Antea Group obtained sanitary sewer maps from the City of San Mateo, and has provided their locations on **Figure 3**.

One sewer line runs past Wardrobe Cleaners along South Railroad Avenue, then makes a 90^{o} turn to the northeast at East Fifth Avenue where Blue Ribbon Cleaners is located. Due to the sewer's proximity to Wardrobe Cleaners, Blue Ribbon Cleaners and the presence of PCE impacts to the southeast of the site, Antea Group considers the sewer lines to be a potential pathway for PCE vapor migration.

4.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the findings stated in this report, Antea Group concludes the following:

- The documented gasoline release associated with 76 Service Station 6390 recorded in the unauthorized release report dated September 10, 1992 did not contribute to the regional PCE plume.
- PCE detections in related wells originate from offsite locations.
- The elevated PCE concentrations in the vapor samples from SS-1 were not caused by the release associated with 76 Service Station 6390. Antea Group should not be responsible for determining the source and extent of this PCE detection, as it is not associated with this case.

Based on the findings stated in this report, Antea Group recommends the following:

- Further PCE evaluations should be discontinued on behalf of the s, and PCE should not be an analyte in future soil, groundwater, and vapor sampling events.
- DTSC should reevaluate the No Action Determination associated with Wardrobe Cleaners location at 335 East Fourth Street.
- If the GPP determines that continued PCE investigations at this site are necessary, a separate case should be opened which names all responsible parties. The PCE present in groundwater beneath this site is not associated with the site's LUST case for the former gasoline UST release.
- Antea Group will not continue to pursue PCE investigation under the current open case.

5.0 REMARKS

The recommendations contained in this document represent Antea USA, Inc.'s professional opinions based upon the currently available information and are arrived at in accordance with currently accepted professional standards. This document is based upon a specific scope of work requested by the client. For any reports cited that were not generated by Delta or Antea Group, the data from those reports is used "as is" and is assumed to be accurate. Antea Group does not guarantee the accuracy of this data for the referenced work performed nor the inferences or conclusions stated in these reports. The contract between Antea USA, Inc. and its client outlines the scope of work, and only those tasks specifically authorized by that contract or outlined in this document were performed. This document is intended only for the use of Antea USA, Inc.'s client and anyone else specifically identified in writing by Antea USA, Inc. as a user of this document. Antea USA, Inc. will not and cannot be liable for unauthorized reliance by any other third party. Other than as contained in this paragraph, Antea USA, Inc. makes no express or implied warranty as to the contents of this document.

Shallow Zone wells - screened interval mostly in the upper 20 feet below grade
Deep Zone wells - screened interval mostly between 20 and 30 feet below grade
SS = stainless steel
PVC = polyvinyl chloride

[1] = TOC Elevations were surveyed to the North American Vertical Datum of 1988 (NAVD 88) on the following dates:

MW-1 through MW-5 -- August 13, 2005 by Morrow Surveying
MW-6 through MW-9 -- January 16, 2007 by Morrow Surveying
MW-10 through MW-15B -- August 18, 2008 by Mid Coast Engineers
MW-17B - June 6, 2011 by Mid Coast Engineers
MW-10R, MW-18, MW-19 - May 25, 2012 by Mid Coast Engineers
MW-20 and MW-21 - May 16, 2013 by Morrow Surveying
MW-22, MW-23 and MW-24 - July 1, 2013 by Morrow Surveying

Notes:

<	Denotes less than Laboratory PQL	DIPE	Di-isopropyl ether	MTBE	Methyl tertiary butyl ether	TOG	Total oil and grease	PCE	Tetrachloroethylene
bgs	below ground surface	EDB	Ethylene dibromide	PQL	Practical Quantitaion Limit	TPH-DRO	Total petroleum hydrocarbons as diesel range organics	TCE	Trichloroethylene
mg/kg	milligrams per kilogram	EPA	Environmental Protection Agency	TAME	Tert-amyl methyl ether	TPH-GRO	Total petroleum hydrocarbons as gasoline range organics	cis-1,2-DCE	cis-1,2-dichloroethylene
ND	Not detected (reporting limit unknown)	ETBE	Ethyl tertiary butyl ether	TBA	Tertiary butyl alcohol	1,2-DCA	1,2-Dichloroethane		

1 Analyzed by EPA Method 3550/8015M
2 Analyzed by Standard Method 5520 E&F (Gravimetric)
3 Analyzed by EPA Method 5030/8015M between 8/1992 and 1/1996; by EPA Method 8260 between 12/2006 and the present.
4 Analyzed by EPA Method 8020 between 8/1992 and 1/1996; by EPA Method 8260 between 12/2006 and the present.
5 Analyzed by EPA Method 8260B
6 Analyzed by EPA Method 8010 in 8/1992; 8260B
7 Analyzed by EPA Method 6000/7000
* Sample may not be representative of in-situ conditions because the boring was air knifed to a depth of 5 feet prior to sampling
a Sample was analyzed for Halogenated Volatile Organic Hydrocarbons (HVOCs) by EPA Method 8010. Tetrachloroethene was detected at 6.4 parts per billion and converted to mg/kg. All remaining constituents analyzed by 8010 were non-detect
b Chromatograph pattern: Diesel and non-diesel mixture (<C14; >C22).
c Sample was analyzed for HVOCs by EPA Method 8010. All HVOCs were reported as non-detect.
d The Continuing Calibration Verification (CCV) recovery was not within established control limits.
e The PQL'S and MDL's was raised due to sample dilution.
f Estimated Value (CLP Flags)
g Surrogate recovery outside control limits due to matrix interferences (not confirmed by re-analysis). Noted on toluene-d8 (S) and 4-Bromofluorobenzene (S
h Analyte recovery in the laboratory control sample (LCS) was below QC limits. Result may be biased low
i Result confirmed by second analysis

♦ The elevations were surveyed relative to mean sea level, per the City of San Mateo Benchmark #33-2 (elevation = 17.65 feet amsl)

† TOC elevations were surveyed by Morrow Surveying on August 13, 2005 to the NAVD 88 datum by GPS observations.
†† TOC elevations were surveyed by Morrow Surveying on January 16, 2007 to the NAVD 88 datum by GPS observations.
††† TOC elevations were surveyed by Mid Coast Engineers on August 18, 2008 to the NAVD 88 datum by GPS observations.
†††† TOC elevation was surveyed by Mid Coast Engineers on June 6, 2011 to the NAVD 88 datum by GPS observations.
††††† TOC elevation was surveyed by Mid Coast Engineers on May 25, 2012 to the NAVD 88 datum by GPS observations.
†††††† TOC elevation was surveyed by Morrow Surveying on May 16, 2013 to the NAVD 88 datum by GPS observations.
††††††† TOC elevation was surveyed by Morrow Surveying on July 1, 2013 to the NAVD 88 datum by GPS observations.

1 Analyzed by EPA Method 5030/8015M between 6/15/94 and 8/10/99, on 8/9/00, on 11/8/00, and between 2/13/02 and 2/18/03; by DHS LUFT between 11/9/99 and 5/18/00; on 2/14/01, and on 8/15/01; by EPA Method 8260B between 8/21/03 and the present.
2 Analyzed by EPA Method 5030/8020 between 6/15/94 and 8/10/99, on 8/9/00, and on 11/8/00; by DHS LUFT between 11/9/99 and 5/18/00, and on 2/14/01; by EPA Method 8021B between 2/13/02 and 2/18/03; by EPA Method 8260B between 8/21/03 and the present.
3 Analyzed by EPA Method 8020M between 3/8/96 and 8/10/99, on 8/9/00, and on 11/8/00; by DHS LUFT between 11/9/99 and 5/18/00, and on 2/14/01; by EPA Method 8021B between 2/13/02 and 2/18/03; by EPA Method 8260B between 8/21/03 and the present.
4 Analyzed by EPA Method 8260B.
5 Analyzed by EPA Method 8270C.

a The presence of MTBE was potentially identified at reportable levels.
b The presence of MTBE was identified at a level equal to or above the taste and odor threshold of 40 µg/L.
c The hydrocarbons detected appeared to be gasoline and a non-gasoline mixture.
d Chromatograph pattern: unidentified hydrocarbons C6-C12
e Chromatograph pattern: weathered gasoline: C6-C12
f Chromatograph pattern: discrete peaks C8-C12
g Chromatograph pattern: discrete peaks
h Sample was additionally run under EPA Method 8260B. MTBE was detected at 1,140 µg/L. All other analytes were non-detect.
i Single analyte peak(s) were present in the requested fuel quantitation range. Fuel hydrocarbon pattern was not present.
j The concentration reported reflect(s) individual or discrete unidentified peaks not matching a typical fuel pattern.
k Reporting limits (PQL or MDL) were raised due to the high level of analyte present in the sample ("D4")
l Detection limit raised due to sample dilution
m Estimated value
n Chromatogram not typical of gasoline.
o The BC laboratory report indicated that reported concentration of 200 µg/L TPPH was due only to the presence of 90 µg/L PCE, 15 µg/L trichloroethane, and 9.8 µg/L cis-1,2-DCA; therefore, SECOR has represented the results for TPPH in this laboratory report as non-detect.
p TPPH was positive due to PCE present in the sample.
q PCE, TCE, and/or 1,2-DCE were subtracted from the gasoline range TPPH, or GRO.
r Sample hold time was exceeded.
s Not enough sample to re-run for PCE.
t First run did not pass, sample had to be diluted due to not enough sample. Only one voa submitted to lab.
u Depth to GW was collected on 9/28/2007 and sample was collected on 8/30/2007
v Sample also analyzed for TPH-diesel (reported at a concentration of 28,000, with the chromatogram reporting a diesel and non-diesel mixture (<C16, >C22)
w Result was positive due to PCE and TCE present in the sample.
x Data from re-sampling event on 3/30/2010.
y "L2" = Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results for this analyte in associated samples may be biased low.
z "M0" = Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory reporting limits.
aa "T4" = Result reported for hydrocarbons within the method-specific range that do not match pattern of laboratory standard.

TABLE 3
HISTORICAL GROUNDWATER GAUGING AND ANALYTICAL DATA
76 SERVICE STATION NO. 6390

SAN MATEO, CALIFORNIA

Sample ID	As - Built Screen Interval (ft below TOC)	TOC Elevation (feet)	Date Sampled	Depth to GW (ft below TOC)	GWE (feet)	GWE Change (feet)	NAPL Thickness (feet)	Sheen	GRO [1] (µg/L)	BTEX [2]				MTBE [3] (µg/L)	TBA [4] (µg/L)	TAME [4] (µg/L)	1,2-DCA [4] (µg/L)	DIPE [4] (µg/L)	ETBE [4] (µg/L)	Ethanol [4]	PCE [4] (µg/L)	TCE [4] (µg/L)	cis-1,2-DCE [4] (µg/L)	trans-1,2-DCE [4] (µg/L)	EDB [4] (µg/L)	VC [4] (µg/L)	Chloroform [4] (µg/L)	Sulfide (mg/L)	Nitrate (mg/L)	Sulfate (mg/L)	Naphthalene [5] (µg/L)
										Benzene (µg/L)	Toluene (µg/L)	Ethylbenzene (µg/L)	Xylenes (µg/L)																		

bb "1n" = The GRO result for this sample did not match the pattern of the laboratory standard for gasoline, likely due to the presence of PCE in the sample
cc Primary compounds not found in typical gasoline
dd "M1" = The matrix spike exceeded the laboratory's QC limits. The batch was accepted based on acceptable recovery from the laboratory control sample.
ee samples also tested for full VOCs, refer to laboratory analytical report for full list of analytes and results.
ff Sample also analyzed for organic lead (result was 'non-detect')
gg Groundwater sample collected may represent casing water trapped in the well bottom.
S5 Surrogate recovery was outside control limits due to matrix interferences (not confirmed by re-analysis).
hh The method reporting limit for ethanol has been increased due to the presence of an interfering compound.
ii Repeat analysis of GRO yielded inconsistent results. The concentrations appear to vary between the bottles. The highest valid result is reported.
jj Repeat analysis for TBA yielded inconsistent results. The concentrations appear to vary between the bottles. The highest valid result is reported.
kk

original GRO testing indicated that the primary compounds were not found in typical gasoline. These values were recalculated under the 'Gasoline Hydrocarbon' parameter, calculated by adding up the chromatographic peaks between hexane and dodecan (C6 to C12), subtracting the non-gasoline compounds (primarily dichloroethene, Trichloroethene, and tetrachloroethene), and comparing against a gasoline calibration curve.

Analytical data prepared by Sequoia Analytical between 6/15/94 and 2/18/04; by Severn Trent Laboratories between 8/21/03 and 3/01/06; by BC Laboratories between 8/02/06 and 7/30/09, and by Pace Analytical / Kiff Analytical between 1/18/10 and the present.

SUBJECT: CONOCOPHILLIPS 76 STATION #6390 AT 402 SOUTH DELAWARE STREET, SAN MATEO, CALIFORNIA

Dear Ms. Lathrop:

Thank you for the February 28, 2007, assessment report and the unsolicited July 9, 2007, work plan prepared by SECOR International Incorporated. The following comments are based on San Mateo County Groundwater Protection Program (GPP) staff review of this work plan and the project file.

Assessment Report

The site history section is very informative. However, our records indicate the capacity of the waste oil UST removed in 1992 was 550 gallons, the sample from MW-4 at 15 feet below grade (fbg) contained 600 mg/kg TPH-gas, and California Department of Water Resources (DWR) well records were reviewed in June 1996 for the presence of water supply wells within 0.25 mile of the subject site. Please consider this information in preparing the background section of future reports.

The tables are very useful. However, Table 1 lists an incorrect tetrachloroethene (PCE) concentration for Footnote A (should be 0.0064 mg/kg) and the sample name listed for A2 and B2 does not match what is shown on report figures. Table 2 identifies Boring SP4 as SP-3 and does not indicate the proper sample name of SP1 and SP2 (no dash was used by the sampling consultant). In addition, Tables 1 and 4 incorrectly identify Borings SP-6 through SP-8 as SB-6 through SB-8. Please ensure future tables listing this information address these observations.

GPP staff could not establish the groundwater sampling depth for Borings SP-5 through SP-8. Sections 3.8 of the report and the field procedures in Appendix B indicate a hydropunch sampler was emplaced across to the "desired" sampling depth. However, this sampling depth was not identified. Sections 3.4 of the report and the boring logs in Appendix C do not indicate the depth interval occupied by the hydropunch (the logs indicate the total depth of Borings SP-5 through SP-8 was between 28 and 34 fbg and groundwater equilibrated in these borings at approximately 15 fbg). Hence, GPP staff cannot establish whether the groundwater samples from these borings were collected from a discrete interval (which was not identified) or represent a mixture of groundwater between approximately 15 fbg and 34 fbg. Therefore, please upload to the State GeoTracker database by **March 25, 2008**, a letter clarifying the groundwater sample collection depth in Borings SP-5 through SP-8.

RECEIVED
FEB 4 2008
By

The depth to the top of the screened interval in MW-7 and MW-8 is less than the depth to groundwater. Although this construction inhibits assessment of first groundwater, it does not appear first groundwater is significantly impacted in these areas based on the laboratory results from the analysis of soil samples collected from the well boring.

The laboratory results from the analysis of subsurface vapor samples suggests hydrocarbon-affected soil and groundwater do not pose a significant indoor air inhalation risk to site occupants. However, the report indicates these samples were collected within 3 days of the area receiving 0.16 inch of precipitation. GPP staff will accept these results because this precipitation amount was below the threshold listed in the soil gas advisory document prepared by the Department of Toxic Substances Control and Los Angeles RWQCB, as argued by SECOR. However, these agencies are currently revising this document which may affect the use of these results.

The historical laboratory results from the analysis of soil samples indicate hydrocarbon-affected soil in the unsaturated zone is not a concern at this site. A comparison of the laboratory results from the analysis of soil samples collected from MW-2 and MW-6 also indicates potential degradation of residual hydrocarbons in saturated zone soils adjacent to the northeast side of the fuel UST cavity.

The report concludes with recommendations to further assess the extent of dissolved-phase hydrocarbons. Our comments on these recommendations are discussed in the following section because they were incorporated into the work plan.

Work Plan

The work plan proposes to remove the subslab vapor sampling probe, destroy the vapor sampling wells, and install seven groundwater monitoring wells to assess the lateral and vertical extent of dissolved-phase fuel hydrocarbons and PCE. GPP staff approve the destruction of the subslab probe and vapor wells and the installation of proposed wells MW-10, MW-11, and MW-13B with the following conditions:

- Evaluate whether the vapor sampling points should be destroyed at this time because they may be needed for future vapor sampling (e.g. change to DTSC soil gas advisory) or remedial testing/monitoring (the Cleanup Fund may not reimburse the cost to reinstall these points if the existing points can be used for other environmental purposes);

- Ensure wells MW-10 and MW-11 are screened across the water table to a sufficient depth to provide useful assessment data without cross-connecting permeable strata to a detrimental degree (constructing these wells like MW-9 may not yield useful data);

- Additionally analyze soil samples collected >20 fbg from MW-13B to assess the vertical extent of the smear zone not assessed by the sampling of MW-6;

- Evaluate using the results of the DWR water supply research performed in June 1996 for the proposed receptor survey;

- Additionally identify the type and location of identified receptors on the figure(s) prepared for the sensitive receptor survey; and

- Submit to the State GeoTracker database by **September 10, 2008**, all electronic files required by California Code of Regulations Title 23, Division 3, Chapter 30, including a report detailing and justifying the methods, findings, conclusions, and recommendations of the investigation

The portion of the work plan proposing to research the source of the PCE and install Monitoring Wells MW-12B and MW-14B through MW-16B does not appear justified. Our reasons for this conclusion are provided in the following paragraphs.

Researching the source of the PCE in groundwater does not appear necessary because it does not appear the subject site was the source of the PCE. This conclusion is based on the PCE concentration in soil sample WO1 (below Environmental Screening Level) and the distribution of PCE in groundwater (does not agree with the distribution of fuel hydrocarbons).

It does not appear proposed monitoring wells MW-12B and MW-14B are necessary. MW-12B does not appear warranted based on the laboratory results from the analysis of groundwater samples from deeper screened MW-1 when depth to groundwater was below the silty gravel layer logged in MW-9. MW-14B does not appear necessary based on the laboratory results from the analysis of soil and groundwater samples from MW-8, length of screened interval in MW-8, and location of MW-8 relative to the source area (fuel UST cavity) and pattern of contamination. However, GPP staff could support collecting depth discrete groundwater samples near SP4 because SP4 was only drilled to 13 fbg (less than the depth of soil impacts identified in the saturated zone of SP-5 and MW-4 and MW-5).

GPP staff cannot support the installation of proposed wells MW-15B and MW-16B until the depth of the groundwater impact near Borings GP-5 through GP-8 is identified and the postulated uniqueness of the shallow and slightly deeper water bearing zones has been demonstrated (i.e. establishing whether the 1.5-foot-thick silt/clay layer logged below 15 fbg in SP-5, SP-6, and SP-8 effectively separates communication between the sands and gravels logged on each side of this stratum). Please discuss in the letter due by March 25, 2008, whether screening a well across this silt/clay layer will negatively impact the quality of groundwater monitoring data or the aquifer, and either support the proposed work or justify alternatives. Please note, if the depth of hydrocarbon-affected groundwater in SP-8 can be identified and is

significantly below the water table, then GPP staff could support installing up to two monitoring wells near SP-8 (one to assess the depth of identified impact and the other to assess groundwater near the water table [appears affected based on laboratory results of soil samples from 19.5 fbg]). However, if the depth of groundwater impact in GP-5 through GP-8 cannot be established, then GPP staff could only support installing one monitoring well near SP-8 to assess groundwater in the uppermost saturated zone and the drilling of borings near SP-8 and MW-11 to determine the vertical extent of dissolved-phase hydrocarbons below the water table (an objective of the previous work).

Please note, ConocoPhillips can implement the proposed work not considered necessary by GPP staff because it does not appear to pose a risk to public safety. However, GPP staff cannot recommend the UST Cleanup Fund reimburse the cost of this work without justification.

GeoTracker Compliance

GPP staff had to deny GeoMap Confirmation 4861744761 for the reasons discussed in the denial. Please upload a correct version of this file within **45 days**. It appears all other required GeoTracker files have been uploaded.

Please call me at (650) 363-4972 if you have any questions.

Sincerely,

Deno G. Milano, P.G.

SUBJECT: CONOCOPHILLIPS 76 STATION #6390 AT 402 SOUTH DELAWARE STREET, SAN MATEO, CALIFORNIA

Dear Ms. Lathrop:

Thank you for the September 8, 2008, assessment and sensitive receptor survey report and associated addendums, and the April 23, 2009, groundwater monitoring report prepared by Stantec Consulting Company (Stantec). The following comments are based on San Mateo County Groundwater Protection Program (GPP) staff review of these documents and the project file.

Assessment and Sensitive Survey Receptor Report

GPP staff consider this report one of the best reports we have received regarding the topics covered. We appreciate the concise detail and the manner in which the information was presented. The report greatly assists in identifying the environmental drivers at the subject site.

The greatest concentrations of tetrachloroethene (PCE) were reported in wells MW-12B and MW-13B located downgradient of the former waste oil tank and low levels of PCE were reported in the 1992 soil sample collected from the waste oil tank cavity. Therefore, assessing the origin of the PCE, as previously recommended by Stantec, now appears warranted. Please identify the former and existing use of the parcels bounded by East Fourth and Fifth Avenue and South Delaware Street and South Claremont Street, incorporate these findings into a workplan that details and justifies a scope of work to assess the origin of this PCE, and upload the workplan to the State GeoTracker database by **December 31, 2009**. Please note, the PCE concentrations in the groundwater samples from MW-12B and MW-13B exceed the Regional Water Quality Control Board (RWQCB) residential land use Environmental Screening Level (ESL) for inhalation concerns. Therefore, assessing the inhalation risk of this PCE appears warranted; however, we will postpone our decision to require ConocoPhillips to perform this work pending our review of the results of the PCE source investigation work.

The report indicates remediation may be necessary near MW-6 if the dissolved-phase hydrocarbon concentrations in this well remain near the levels reported. Therefore, please consider incorporating into the workplan required above a scope of work to assess the lateral extent of residual hydrocarbons in saturated zone soils approximately 15 feet northeast and east of the existing fuel UST cavity. This information would not only assist in identifying the target

treatment zone of remediation, but may demonstrate significant residual impact to saturated zone soil is limited to the northeast end of the fuel UST cavity (i.e. remediation not warranted providing other RWQCB low-risk case closure criteria are satisfied).

Monitoring Report

The monitoring results support the upward component to groundwater flow concluded in the September 2008 assessment report. Please continue to report on the vertical gradient.

The report indicates a portion of the TPH concentrations in some samples are from PCE eluting in the TPH analytical range. Please consider footnoting the analytical results table in future reports to indicate this condition. Please also analyze the groundwater samples for halogenated volatile organic compounds unless ConocoPhillips can demonstrate the PCE did not originate from the subject site.

Please call me at (650) 372-6292 if you have any questions.

Sincerely,

Deno G. Milano, P.G.

SUBJECT: CONOCOPHILLIPS 76 STATION #6390 AT 402 SOUTH DELAWARE STREET, SAN MATEO, CALIFORNIA

Dear Ms. Lathrop:

Thank you for uploading to the State GeoTracker database the following documents prepared by Delta Consultants: 1) workplan dated December 31, 2009, and 2) groundwater monitoring report dated May 14, 2010. The following comments are based on San Mateo County Groundwater Protection Program (GPP) staff review of these documents and the project file.

Workplan

It does not appear the workplan will adequately assess the extent of the smear zone impact surrounding the fuel UST cavity and the origin of the tetrachloroethene (PCE) reported in groundwater samples (the objectives of the work). Proposed Monitoring Well MW-19B may confirm what we already know (that significant hydrocarbons exist in smear zone soils adjacent to the fuel UST cavity) and a well at this location does not appear justified based on the proximity of existing MW-6 and MW-13B (a boring in Delaware Street and perhaps in the eastern corner of the site may satisfy the objective). It also does not appear that proposed onsite Monitoring Wells MW-16B through MW-18B would cost-effectively assess the origin of the PCE in groundwater. The workplan identified potential PCE sources upgradient of the subject site (e.g. Wardrobe Cleaners; Figure 3 in Attachment C). Therefore, installing three monitoring wells onsite does not appear useful or necessary when it has not been established whether ConocoPhillips is responsible for the PCE (upgradient grab groundwater samples appear more appropriate at this time). We could support proposed MW-16B, but only if the PCE concentrations reported in upgradient grab groundwater samples approximated acceptable laboratory reporting limits (would support a ConocoPhillips source for the PCE). Therefore,

given the foregoing discussion, please upload to the State GeoTracker database by **October 29, 2010**, a revised workplan that will satisfy the objectives of the investigation.

The workplan indicates perched groundwater exists at this site. Please note, no justification has been provided to GPP staff to demonstrate a perched groundwater zone exists at the subject site. Please also note, the information referenced in Appendix G is not complete.

Groundwater Monitoring Report

The sampling and monitoring information table on the top of Page 3 of the report indicates the nearest water supply well is 250 feet northwest of the site. This is incorrect. Please refer to the previous receptor survey reports (2008 and 1996) for the location of nearby water supply wells.

The report indicates the wells were re-sampled in March 2010 because samples were not collected for halogenated volatile organic compound (HVOC) analysis during the normal monitoring event in January 2010. Except for the sampling of MW-9 and MW-11, the UST Cleanup Fund may only reimburse the laboratory costs for the March 2010 event because HVOC analyses were required in our letter dated June 25, 2009.

The report indicates MW-10 dewatered during purging. Please reduce the purging rate for this well to minimize potential dewatering. If the well dewaters during the next monitoring event, then please collect a "no-purge' sample from this well during subsequent monitoring events and denote the sample collection method on the appropriate report table(s).

The report references elevations to mean sea level. Please note, the well casing elevations for the subject site were referenced to North American Vertical Datum-1988 which is not equivalent to mean seal level. The elevation notes on report tables also do not concur with the GeoZ files in the State GeoTracker database.

The report states an upward hydraulic head potential existed between MW-6 and MW-13B on January 18, 2010. This conclusion appears to apply to March 2010 based on the groundwater elevations listed in Table 2. Please note, conclusions regarding hydraulic head differential may be limited when the differential (0.01 foot in January 2010) approximates the accuracy of well gauging. Please also note, some of the dates and groundwater elevations listed in Table 2 for MW-10 and MW-11 are incorrect.

The Blain Tech Services purging and sampling procedures in Attachment B differ from the purging and sampling procedures used before environmental responsibilities were recently transferred to Delta Consultants. The previously approved procedures should be used unless the Registered Professional can justify changes prior to implementation.

It appears the groundwater monitoring at the subject site can be reduced to annual frequency following the Third Quarter 2010 event. Please implement this change unless the Registered Professional can justify the greater frequency.

Closing Comments

It is our understanding ConocoPhillips may have sold the subject site and perhaps their environmental liability; however, we have not received any correspondence confirming that this has occurred. Please note, even if this transaction has been finalized, GPP staff will still consider ConocoPhillips the Primary Responsible Party for the release currently being assessed. While ConocoPhillips' may enforce the assignment of their environmental responsibility in the courts as a civil matter, such assignment does not legally relieve ConocoPhillips of their Responsible Party status under the California Health and Safety Code. Therefore, we will continue to address our letters to ConocoPhillips and, as a courtesy, copy our letters to Delta Consultants.

Please call me at (650) 372-6292 if you have any questions.

Sincerely,

SUBJECT: UNOCAL 76 STATION #6390 AT 402 SOUTH DELAWARE STREET, SAN MATEO, CALIFORNIA

Dear Mr. Frohnapple and Ms. Lathrop:

Thank you for uploading to the State GeoTracker database the October 29, 2010, revised workplan prepared by Delta Consultants (now Antea Group). The following comments are based on San Mateo County Groundwater Protection Program (GPP) staff review of the workplan and the project file.

The most recent groundwater monitoring information referenced in the workplan was August 2008; however, monitoring data through July 2010 was available at the time the workplan was written. Please ensure all available and pertinent data is used to prepare documents.

Section 6 of the workplan states analysis of groundwater samples for tetrachloroethene (PCE) was discontinued based on the GPP staff letter dated January 30, 2008. Please note, our more recent letter dated June 25, 2009, reinstated groundwater analysis for PCE because of the PCE concentrations reported in newly installed Monitoring Wells MW-12B and MW-13B. We reiterated this requirement in our letter dated August 9, 2010.

Proposed Borings SB-1 through SB-7 and proposed Monitoring Well MW-17B are approved with the following conditions:

- Consider relocating proposed SB-5 between Sample WO-1 and the building located on the eastern corner of East Fourth Avenue and Claremont Street (would help assess the property between the former waste oil UST and proposed SB-1 through SB-4);
- Use site well gauging data in determining the depth to groundwater in the borings;
- Ensure the temporary pre-packed screen is installed across an appropriate interval for PCE assessment in groundwater and is removed prior to grouting (these procedures were not discussed in the workplan and the field procedures are for hydropunch™ sampling);

- It does not appear necessary to use conductor casing during the installation of MW-17B given the contaminant concentrations reported, the proposed well construction, and the minimal time it will take to construct the well;

- Postponing the drilling of MW-17B at 16 feet below grade (fbg) in order to sample groundwater at the water table does not appear necessary because nearby MW-9 provides some monitoring data on this portion of the saturated zone;

- Settle the filter pack prior to installing the sanitary seal of MW-17B;

- Attempt to coordinate the collection of groundwater samples from MW-17B with the first quarter 2011 groundwater monitoring event;

- Consider limiting the soil samples submitted for laboratory analysis from SB-6 and SB-7 to those collected between 10 and 25 fbg unless sample screening indicates otherwise (samples from 5 and 30 fbg do not appear necessary based on historical data); and

- Submit to the State GeoTracker database by **July 28, 2011**, all electronic files required by California Code of Regulations Title 23, Division 3, Chapter 30, including a report detailing and justifying the methods, findings, conclusions, and recommendations of the investigation.

The report must indicate how investigative derived wastes were disposed and include scaled figures (base-10 preferred) and data analytical tables sufficient to support conclusions regarding contaminant extent, stability, and risk. It would be beneficial if at least one figure identified all sampling locations to date and the report included tables summarizing historical gauging data and the laboratory results of all soil, groundwater, and subsurface vapor sampling analyses performed to date (one table for soil, one for groundwater, and one for vapor is preferred). It would also be beneficial if each table indicated the date and depth of sample collection, as appropriate, and the proper field point name (FPN). FPNs must be consistent between text, figures, tables, and boring logs. Please note, the scale shown on Figure 3 is incorrect. Please ensure the correct scale is shown on the figures in the investigative report.

Closing Comments

GPP staff cannot at this time support the proposed installation of MW-16 and MW-16B. We do not support MW-16 because: 1) it has not been established the PCE originated from the 76 station; 2) the proposed screen interval may result in a typically dry well like MW-9; and 3) the well does not appear necessary for the assessment of the fuel release based on the soil sampling results from D3, P5, P6, and SP-6. We do not support MW-16B because it appears MW-14B is sufficient to assess the dissolved-phase PCE in this area.

Please note, the 0.0064 mg/kg PCE concentration reported in soil Sample WO-1 at 8 fbg does not demonstrate the former waste oil UST leaked PCE. This sample is within the reported interval of groundwater fluctuation; therefore, it is possible the PCE in this sample originated

from PCE-affected groundwater migrating from an upgradient source. We hope the proposed investigation will clarify this issue.

Please call me at (650) 372-6292 if you have any questions.

Sincerely,

Brett Hunter
Chevron Environmental Management Company
6101 Bollinger Canyon Road, 5th Floor
San Ramon, CA 94583-5186

SUBJECT: UNOCAL 76 STATION #6390 AT 402 SOUTH DELAWARE STREET, SAN MATEO, CALIFORNIA

Dear Mr. Hunter:

Antea Group recently uploaded the following documents to the State GeoTracker database: 1) assessment report dated July 28, 2011; 2) addendum to the assessment report dated August 10, 2011; 3) revised laboratory report dated September 2, 2011; and 4) an unsolicited workplan dated August 9, 2011. The following comments are based on San Mateo County Groundwater Protection Program (GPP) staff review of these documents and the project file.

PCE and Gasoline Assessment Report

The GeoBore and GeoWell files for the investigation have not been uploaded to the State GeoTracker database as required by State regulations. Please **immediately** upload these files to complete the investigation (the deadline was July 28, 2011). Please also ensure the GeoBore file for MW-17B lists the proper casing diameter (incorrectly listed on boring log in Appendix H).

The well screen listed for MW-15B on Table 1 and the TPPH concentrations listed on the vapor results table in Appendix D are incorrect. In addition, the historical groundwater results tables in Appendix E do not include the historical grab groundwater sampling results and a significant amount of solvent results from the monitoring wells. Please ensure future data tables are accurate and complete. Please also consider adding recent and future investigative results to the appropriate portion of the historical results tables to assist the evaluation of site conditions.

Cross-Section A-A' (Figure 6A) is very informative. However, it does not show the location of the former Unocal waste oil UST (potential PCE source area) and the soil textures shown adjacent to Boring SB-6 and MW-4 appear to conflict with those shown on the boring log. Please ensure future cross-sections consider these observations.

Section 3.2 states the site is located in the South Bay groundwater basin. Please note, the site is within the Santa Clara Valley groundwater basin and South Bay hydrologic planning area (watershed) according to the Regional Water Quality Control Board (RWQCB).

Section 3.3 states an aquitard has been identified at approximately 25 feet below grade (fbg) and a deeper groundwater bearing zone has been reported beneath this aquitard from 13 to 18.5 fbg. This statement does not make sense. Please ensure future reports discussing hydrologic conditions clarify what is meant by this statement.

The report indicates a number of soil samples collected from Borings SB-1, SB-3, SB-4, SB-5, and MW-17B were analyzed for TPPH, BTEX, fuel oxygenates, and halogenated volatile organic compounds (HVOCs). These analyses were not required by GPP staff, nor were they proposed in the October 29, 2010, workplan approved in our letter dated February 8, 2011. Only the analysis of the soil samples collected from SB-5 at ≥15 fbg appears justified because no groundwater samples were collected from this boring. Therefore, we cannot recommend the UST Cleanup Fund reimburse the cost to analyze the soil samples from SB-1, SB-3, SB-4, and MW-17B.

Section 5.1 indicates all boreholes except SB-6 were air-knifed to 5 fbg. Although we don't anticipate PCE-affected soil at 5 fbg, future data tables should nevertheless indicate via footnote that air-knifing may have affected the volatile organic compound content of the 5 foot samples.

The results of the investigation indicate a PCE source exists upgradient of the site. However, we cannot establish whether the former waste oil UST at the Unocal site contributed to the PCE plume (one of the objectives of the investigation) because: 1) the groundwater PCE results in upgradient Borings SB-1, SB-3, and SB-4 and T. Endo Automotive well MW-2 are 12 to 242 times less than the PCE concentration reported in MW-13B which is located downgradient of the former Unocal waste oil UST; 2) no groundwater sample was collected from SB-5 to determine whether the former gasoline station on the parcel immediately west of the site may have contributed to PCE reported in MW-13B; and 3) upgradient Borings SB-1, SB-3, and SB-4 were drilled to 30 fbg (approximately 15 feet below the depth to groundwater) and groundwater samples were only collected from the lower 5 feet of these borings instead of the lower 10 feet proposed in the approved workplan (i.e. we cannot establish if first groundwater in SB-1, SB-3, and SB-4 contains greater PCE concentrations which may eliminate Unocal as a potential PCE source). Therefore, we do not concur with the recommendation to discontinue further PCE assessment (refer to the additional assessment discussed in the workplan section of this letter).

The report refers to "A" and "B" zone groundwater and indicates the groundwater in the "A" zone is perched (Sections 6.1 and 8.0). No justification has been provided to demonstrate first groundwater is perched. This appears to be an artifact from older reports.

The report compares the laboratory results from the analysis of soil samples collected from the saturated zone to RWQCB Environmental Screening Levels (e.g. Section 6.2.1 and 6.2.2). Please note, the soil ESLs established by the RWQCB only apply to soil samples collected from the unsaturated zone.

It appears the vertical extent of gasoline-affected soil and fuel impact to deeper groundwater has been adequately assessed based on the laboratory results from the analysis of soil and

groundwater samples. However, the lateral extent of fuel hydrocarbons in first groundwater has not been assessed east and southeast of MW-6 and SB-7. The elevated fuel hydrocarbon concentrations in the groundwater from SB-7 and the drilling depth indicate first groundwater near this boring may contain non-aqueous phase liquid. In addition, the fuel hydrocarbon concentrations reported in the SB-6 groundwater sample may underestimate fuel hydrocarbon impact to first groundwater because this boring was drilled approximately 15 feet below the depth to groundwater and the groundwater sample was collected from the lower 5 feet of the boring (soil sample laboratory results, PID screening, and a comparison of the dissolved-phase hydrocarbon concentrations in MW-6 and MW-13B indicate the sampling depth of this groundwater sample should not have exceeded 20 fbg). Therefore, GPP staff are requiring additional assessment of fuel hydrocarbons in first groundwater east and southeast of the fuel UST cavity (discussed in the workplan section of this letter).

The report recommends preparing a remedial action investigation workplan to mitigate hydrocarbons in the vicinity of MW-6, but not within Delaware Street. GPP staff cannot concur with this recommendation at this time because: 1) the need for remediation has not been justified; 2) the value of mitigating hydrocarbons within only a 6-foot-interval between the fuel UST cavity and Delaware Street was not justified; 3) the extent and impact of fuel hydrocarbons in first groundwater has not been assessed east and southeast of the fuel UST cavity; and 4) the potential contribution of PCE from the Unocal site has not been established. These factors affect the need and scope of remediation (please refer to workplan section of this letter for additional required assessment). Please note, remediation may not be necessary if the gasoline release is the only driver for the Unocal site and the fuel impact does not contain NAPL, is limited to under the street, is stable, does not pose a significant risk to human health and environment, and will degrade to RWQCB water quality objectives within a reasonable time.

The well purging field procedures discussed in Appendix G and used for MW-17B (Appendix G) were not the procedures proposed by Antea in their November 2010 groundwater monitoring report and conditionally approved in our letter dated December 2, 2010. No justification was provided for deviating from the approved protocol. Please ensure sampling is performed in accordance with approved protocols unless the report justifies the deviation(s).

Addendum to Assessment Report

The addendum recommends adding MW-17B to the groundwater monitoring program. GPP staff concur with this recommendation. Please note, however, it is not necessary to recommend adding a new well to the groundwater monitoring program. This action is expected when we approve the installation of the well(s).

The addendum also recommends increasing the frequency of groundwater monitoring from annual to semi-annual in order to build an adequate data set in a reasonable amount of time. GPP staff can support semi-annual monitoring of MW-6 (increasing benzene concentrations) and of MW-12B and MW-13B (elevated PCE impacts), but not semi-annual monitoring of the other

wells because only minor impacts have been reported in the other wells. However, we support semi-annual monitoring of future wells installed east and southeast of the fuel UST cavity to monitor first groundwater (refer to the workplan section of this letter).

Revised Laboratory Report for the Assessment Report

The revised laboratory report pertains to the analysis of the soil samples from Borings SB-1, SB-3 through SB-5, SB-7, and MW-17B and the analysis of the groundwater samples from SB-1, SB-3, SB-4, and SB-7. The report adequately explains the impact of all data qualifiers on the laboratory results except qualifiers S0 and S5 (only indicate surrogate recoveries were outside of laboratory control limits). Please **immediately** upload to the State GeoTracker database a letter prepared by the laboratory indicating the impact of qualifiers S0 and S5 on the integrity and use of the laboratory results. Any unrepresentative results should be appropriately identified on future analytical tables by an appropriate footnote.

Unsolicited Workplan

GPP staff concur with the proposal to destroy MW-10 and install replacement well MW-10A. However, we do not concur with the proposal to screen MW-10A between 9 and 17 fbg. It appears MW-10A should be screened from 6 to 21 fbg based on the depth to groundwater reported in former MW-5, the PID screening and soil sampling results in Borings SB-6 and SB-7, and a comparison of the soil and groundwater sampling results from MW-6 and MW-13B. GPP staff are more concerned with adequately evaluating potential hydrocarbon impact to first groundwater than potentially spreading relatively low BTEX and MTBE concentrations a few feet deeper into strata having similar groundwater use and that are already impacted by PCE. Moreover, the PID screening and soil sampling results from SB-7, MW-6, and MW-13B do not suggest the silt logged in MW-5 at approximately 15 fbg is serving as a barrier to the vertical migration of fuel hydrocarbons. The following additional conditions apply to the proposed work:

- Install a monitoring well to assess first groundwater immediately southeast of SB-7 (a screen between pproximately 6 and 21 fbg appears reasonable);

- Collect a grab groundwater sample or install a monitoring well to assess first groundwater near MW-4 (the depth of the groundwater sample from SB-6 may have underestimated the fuel hydrocarbon impact to first groundwater);

- Collect grab groundwater samples at SB-5 and immediately east of Sample WO-1 to assess the PCE content of first groundwater and thedepth monitored by MW-13B;

- Screen the soil samples with an appropriate photoionization detector;

- Base the texture of well filter pack on the texture of the soil logged opposite the screened interval and also settle the filter prior to installing the bentonite seal;

- Upload to the State GeoTracker database by **May 2, 2012**, all electronic files required by California Code of Regulations Title 23, Division 3, Chapter 30, including a report detailing and justifying the methods, findings, conclusions, and recommendations of the investigation.

The report must indicate how investigative derived wastes were disposed and include scaled figures (base-10 preferred) and data analytical tables sufficient to support conclusions regarding contaminant extent, stability, and risk. It would be beneficial if at least one figure identified all sampling locations to date and the report included tables summarizing historical gauging data and the laboratory results of all soil, groundwater, and subsurface vapor sampling analyses performed to date (one table for soil, one for groundwater, and one for vapor is preferred). It would also be beneficial if each table indicated the date and depth of sample collection, as appropriate, and the proper field point name (FPN). FPNs must be consistent between text, figures, tables, and logs.

Please note, the UST Reimbursement Fund may not reimburse the cost to destroy MW-10, install MW-10A, and collect the grab groundwater samples near SB-5. This is because the initial work to perform these tasks did not satisfy the objective of the investigation.

Closing Comments

It is not necessary to name borings and wells by the FPN listed in the workplan. This leads to FPN gaps if the proposed borings/wells were not installed (e.g. SB-2 and MW-16B), which may confuse future reviewers of the file (i.e. they may think SB-2 and MW-16B were installed because site plans show borings or wells of greater number (SB-3 through SB-7 / MW-17B). Please consider naming borings and wells in a logical sequence when they are installed.

Please call me at (650) 372-6292 if you have any questions.

SUBJECT: UNOCAL 76 STATION #6390 AT 402 SOUTH DELAWARE STREET, SAN MATEO, CALIFORNIA

Dear Mr. Hunter:

Antea Group uploaded the following documents to the State GeoTracker database: 1) assessment report dated July 6, 2012; 2) groundwater and subsurface vapor assessment workplan dated September 7, 2012; and 3) groundwater monitoring report dated November 15, 2012. The following comments are based on San Mateo County Groundwater Protection Program (GPP) staff review of these documents and the project file.

Assessment Report

Section 3.5 of the report and the well construction details indicate #3 sand was used for the filter pack of monitoring wells MW-10R, MW-18, and MW-19. A #3 filter pack certainly does not appear appropriate for MW-10R given the texture of the logged soil. Page 4 of our letter dated November 22, 2011 required filter pack size to be based on the texture of the formation opposite the screened interval. Therefore, we may require replacement of these wells if future problems with siltation or remedial effectiveness should occur.

Section 4.1 of the report states no groundwater is present <21 feet below grade (fbg) within the western portion of the site, which is why only deeper groundwater samples were collected from Borings TW-1 and SB-8. However, the depth to groundwater reported in TW-1 and SB-8 and within site wells suggests groundwater is present at approximately 15 fbg (smearing or compaction of fines from the drilling process may have inhibited groundwater from accumulating in the borehole). Installing a shallow monitoring well near at least Boring SB-8 will resolve this problematic issue (discussed in the workplan portion of this letter) and satisfy the assessment of first groundwater in this area that was required in our November 2011 letter.

Section 5.o of the report does not demonstrate Pace lab qualifiers E and S5 do not affect the use of the data. Please upload to GeoTracker by **March 29, 2013**, a letter from the laboratory demonstrating these qualifiers do not affect the use of the qualified results (concluding they don't without justification is not sufficient).

GPP staff do not consider it reasonable for the isoconcentration lines on Figures 5 and 6 to close west, northeast, and southeast of the fuel UST cavity. Results obtained from the deeper screened monitoring wells should not be used to determine where to close these lines because the investigation demonstrated the greatest fuel hydrocarbon concentrations occur in groundwater <21 fbg and no groundwater sampling data from <21 fbg has been collected west and northeast of the fuel UST cavity and south of MW-10R.

Table 2 does not define the abbreviations used for the halogenated organic compounds listed in the column headings, nor does it define the asterisk footnote. Please ensure this is addressed in future versions of this table. It appears the asterisk footnote denotes samples where the reported volatile organic compound concentrations may not be representative of in-situ conditions because an air-knife was used to clear the borehole prior to sampling.

The site history data in Appendix C is not complete and contains some incorrect data. Please incorporate the following comments into future discussions of site history: 1) two holes were observed in the waste oil UST after its removal; 2) Pacific Environmental Group only identified one well within 0.25 mile of site in June 1996 (a cathodic protection well); and 3) Delta is not awaiting GPP staff approval to implement the October 2010 workplan.

The report concludes the tetrachloroethene (PCE) in deeper groundwater (chiefly >21 fbg) did not originate from site activities because soils beneath the former waste oil tank did not contain PCE and relatively low levels of PCE were reported in groundwater sample SB-8. GPP staff consider this conclusion flawed because PCE was in fact reported in a sample of unsaturated zone soil beneath the waste oil UST (Sample WO1; refer to the laboratory report in the report dated November 24, 1992 – incorrectly reported on Table 2 of assessment report). Furthermore, the grab groundwater sample from SB-8 does not explain why the greatest PCE concentrations in groundwater occur in the deeper screened wells downgradient of Unocal's former waste oil tank cavity (MW-7, MW-12B, MW-13B, and MW-15B). Therefore, at this time, it appears activities at the subject site have contributed to the neighborhood PCE plume in concentrations exceeding water quality objectives.

Workplan

The workplan proposes to install two shallow groundwater monitoring wells and two depth discrete subsurface vapor sampling wells. GPP staff approve the proposed installation of the groundwater monitoring wells with the following conditions:

- Install an additional monitoring well screened from 6 to 21 fbg adjacent to the north side of Boring SB-8 to complete the shallow groundwater assessment near the former waste oil UST (an uncompleted objective of the previous assessment). This well will also provide data to assess the lateral extent of dissolved-phase hydrocarbons west of the fuel UST cavity;

- Consider installing a well screened from 21 to 31 fbg near Boring SB-1 to potentially clarify the contribution of PCE from the subject site (T. Endo Automotive Well MW-2 may not be useful for this purpose because the top of the screened interval is 15 fbg [potential dilution compared to data from wells screened >21 fbg]);

- Base the size of the well filter pack on the texture of the formation opposite the screened interval;

- Attempt to coordinate the sampling of these new wells with the First Quarter 2013 groundwater monitoring event; and

- Upload to the State GeoTracker database by **July 18, 2013**, all electronic files required by California Code of Regulations Title 23, Division 3, Chapter 30, including a report detailing and justifying the methods, findings, conclusions, and recommendations of the investigation.

GPP staff concur subsurface vapor sampling is appropriate, but not from the vapor sampling wells proposed in the workplan. The vapor sampling wells are proposed in landscaped planters adjacent to building foundations and paved areas. Hence, the samples obtained from these wells may underestimate the potential vapor intrusion impact to building occupants because of the physics of subsurface vapor flow near buildings. Therefore, GPP staff approve the subsurface vapor sampling portion of the workplan with the following conditions:

- Install two sub-slab vapor sampling probes in the buildings at 521 and 603 East 5th Avenue instead of the proposed subsurface vapor wells;

- Place the shroud over the sub-slab probe prior to purging (the shroud does not need to surround the Summa canisters if the equipment vacuum test demonstrates the vapor purging and sampling apparatus is tight);

- Record shroud helium concentrations every 30 to 60 seconds (not every 2 to 5 minutes as proposed in the workplan) because the proposed flow rate will fill the proposed 1 liter sampling canister within approximately 6 minutes;

- Collect cold and warm season vapor samples from the sub-slab vapor probes and from existing VP-1 and VP-3 (no Regional Water Quality Control Board soil screening level exists for potential vapor intrusion of PCE);

- Additionally analyze the vapor samples for PCE and naphthalene; and

- Upload to the State GeoTracker database by **May 30, 2014**, all electronic files required by California Code of Regulations Title 23, Division 3, Chapter 30, including a report detailing and justifying the methods, findings, conclusions, and recommendations of the

investigation (assumes offsite access will not be obtained in time to perform cold season vapor sampling before March 2013).

Monitoring Report

The report states the groundwater sample collected from MW-11 may represent groundwater trapped in the well bottom cap from when groundwater elevation exceeded the elevation of the bottom cap. GPP staff consider this conclusion reasonable. Please ensure future versions of Table 3 include a footnote to denote this condition.

The GeoWell files uploaded for the site have not been listing the measured total well depth. Please ensure future GeoWell files list this depth. Please also ensure future hydrocarbon isoconcentration maps are justified as discussed in the assessment report portion of this letter.

The field sampling sheets in Appendix C indicate the depth to the top of the pump intake in the "B" suffixed wells is at the top of the screened interval. This does not appear appropriate, especially when a shallow well is nearby. It appears the depth of the sampling pump intake in the deeper screened wells should approximate 24 fbg. Please also ensure future time series graphs (Appendix F) reference the groundwater elevation to the appropriate datum.

The report recommends discontinuing analysis for PCE. GPP staff do not concur with this conclusion based on the comments in the assessment report portion of this letter. Please continue to additionally analyze the groundwater samples for PCE.

The report recommends discontinuing the calculation of vertical hydraulic gradient. GPP staff do not approve this recommendation. Calculation of vertical hydraulic gradient is customary when shallow/deep well pairs are available (e.g. MW-6/MW-13B and MW-4/MW-19) because contamination does not always remain at the top of the saturated zone. The calculation involves minimal effort because well gauging and construction data are available from other tasks.

Please contact me at (650) 372-6292 or at dmilano@smcgov.org if you have any questions.

SUBJECT: UNOCAL 76 STATION #6390 AT 402 SOUTH DELAWARE STREET, SAN MATEO, CALIFORNIA

Dear Mr. Hunter:

Antea Group has uploaded the following documents to the State GeoTracker (Geotracker) database: 1) soil and groundwater investigation report dated July 17, 2013; 2) unsolicited monitoring well installation workplan dated October 12, 2013; and 3) groundwater monitoring report dated November 11, 2013. The following comments are based on San Mateo County Groundwater Protection Program (GPP) staff review of these documents and the project file.

Soil and Groundwater Investigation Report

The GeoZ file for MW-20 and MW-21 has not been uploaded to GeoTracker as required by State regulations. Please **immediately** upload this file to complete the soil and groundwater investigation task (the deadline to complete this work was July 18, 2013).

Section 2.9.3 states the maximum concentration of tetrachloroethene (PCE) in the groundwater samples collected in July 2013 was from upgradient well MW-23 (90 ug/l). This is incorrect. Greater PCE concentrations were reported in the groundwater samples collected downgradient of the Unocal station (160 ug/l from MW-13B and 120 ug/l from MW-12B). We consider the source of the PCE problematic and do not concur with conclusion in the report that the PCE solely originated from an upgradient source. Although the PCE in the MW-23 groundwater sample indicates some of the PCE likely originated from an upgradient source and the soil sampling results from MW-22 do not support a PCE release from the waste oil tank, the PCE concentrations nevertheless increase at the subject site (e.g. were <12 ug/l in the May 2011 grab groundwater samples from upgradient Borings SB-3 and SB-4) and the only vadose zone soil sample reported to contain PCE was collected from the waste oil tank excavation. GPP staff will postpone a decision on further PCE corrective action pending our review of the upcoming subsurface vapor sampling report.

The report implies the grab groundwater samples from SB-11 are not as representative as those from MW-24. These groundwater samples were collected at different depths within the saturated zone, and therefore, are not directly comparable. The solvents reported in the SB-11 groundwater sample support the deeper occurrence of PCE reported at other sampling locations and the TPHg concentration in this sample may represent PCE eluting in the TPHg analytical range.

Section 2.11 indicates the Third Quarter 2013 monitoring report would include the waste manifest. It did not. Please note, the deadlines GPP staff establish to complete soil and groundwater investigations include sufficient time to properly dispose of wastes and the corrective action is not considered complete until proper waste disposal is documented.

Unsolicited Workplan

The workplan proposes to install two groundwater monitoring wells on South El Dorado Street downgradient of MW-21. GPP staff do not consider this work necessary at this time. The groundwater samples from MW-21 have only contained up to 0.72 ug/l of benzene and <5 ug/l of MTBE and the BTEX concentrations in these samples are less than those reported in the groundwater samples from upgradient MW-10R. Although the 24,000 ug/l TPHg and 460 ug/l naphthalene concentration reported in the July 2013 groundwater sample from MW-21 is significant, only 3,400 ug/l of TPHg and 82 ug/l of naphthalene were reported in the May 2013 samples (the only other sampling event). Hence, continued monitoring to determine representative TPHg and naphthalene concentrations in MW-21 groundwater appears more appropriate at this time than installing additional monitoring wells. In addition, the preliminary subsurface vapor sampling results at 603 E. Fifth Avenue (EDF 3607240200) suggests naphthalene does not pose a significant vapor intrusion risk. Therefore, we cannot recommend the UST Cleanup Fund reimburse the cost of this work if Chevron or Antea elects to install these wells at this time.

Groundwater Monitoring Report

Table 3 does not include the grab groundwater sampling results from Boring SB-11 in the soil boring section of the table. Please ensure future versions of this table include these results.

The well gauging (GeoWell) file for the September 2013 gauging event has not been uploaded to GeoTracker as required. Please **immediately** upload this file to complete the Third Quarter 2013 groundwater monitoring task.

Please contact me at (650) 372-6292 or at dmilano@smcgov.org if you have any questions.

Appendix B

Site Details and Summary of Previous Environmental Investigations

SITE LOCATION AND BACKGROUND

The site is currently an active "76"-branded service station. The station is located approximately one mile west of San Francisco Bay in San Mateo, California, at an elevation of approximately 20 feet above mean sea level. The site facilities include two fuel underground storage tanks (USTs) located in a common pit in the southeast portion of the property, three product dispenser islands, and a station building. The USTs were installed at the site in August 1992 during station upgrade activities. A 550-gallon waste oil UST formerly located behind the station building was removed from the site in 1992.

The site is bounded to the northeast by South Delaware Street and a Jiffy Lube facility (407 South Delaware Street), to the northwest by East Fourth Street and commercial buildings, to the southwest by a parking lot for a Taco Bell restaurant (500 East 4th Avenue), and to the to the southeast by a Legal Aide of San Mateo building (521 South Delaware Street) and parking area.

There are seven existing or former gasoline service stations within ¼-mile of the site area. The site is located in a mixed commercial and residential area. The nearest residences are southwest of the site at 411 South Claremont, or approximately 50 feet southwest of the site and an apartment building is located at 603 East 5th Avenue approximately 75 feet northeast of the site.

SUMMARY OF PREVIOUS ENVIRONMENTAL INVESTIGATIONS

In August 1992, Kaprealian Engineering, Inc. (KEI) observed the removal of two 12,000-gallon, fiberglass gasoline underground storage tanks (USTs), one 550-gallon waste oil UST, and the associated product piping and dispensers. Upon removal of the tanks, a 9-inch crack was observed along the eastern end of the super unleaded gasoline UST, and two 3/16-inch diameter holes were observed in the waste oil tank. A monitoring well had apparently been installed too close to the super unleaded UST, causing the crack. Petroleum hydrocarbon contamination was observed at the eastern end of the gasoline UST cavity. The cavity was over-excavated to remove as much of the impacted soil as possible, resulting in a final excavation that measured approximately 30' by 27' by 22' deep. Initially, six soil samples (A1, A2, B1, B2, SW1, and SW2) were collected from the bottom and sidewalls of the UST cavity, one soil sample (WO1) was collected from the bottom of the waste oil UST cavity, and six soil samples (P1, P2, P3, P4, P5, and P6) were collected from the bottom of the product piping trenches.

At a later date, KEI collected an additional three soil samples (SW1, SW2, and SW3) from the gasoline UST cavity, along with a grab groundwater sample (W1). The water sample was collected after a total of approximately 5,800 gallons of water had been pumped form the gasoline UST cavity. The groundwater had floating product and a heavy sheen. Additionally, KEI collected three soil samples (D1, D2, and D3) from beneath the gasoline dispensers. Laboratory analyses of soil samples collected from the gasoline UST cavity reported relatively high levels of total petroleum hydrocarbons as gasoline (TPHg) benzene, toluene, ethylbenzene, and total xylenes (BTEX compounds), and total petroleum hydrocarbons as diesel (TPHd). The requested petroleum hydrocarbon constituents were not reported above laboratory detection limits in the soil samples collected from the product piping trenches and from beneath the gasoline dispensers. Laboratory analysis of the soil sample from the waste oil UST indicated the

presence of the heavy metals cadmium, chromium, nickel, lead and zinc, while the remaining petroleum hydrocarbon constituents were not indicated at concentrations above the laboratory detection limits. High levels of TPHd, TPHg, and BTEX compounds were also reported in the groundwater sample.

In May 1994, KEI installed three monitoring wells (MW-1, MW-2 and MW-3) at the site. Laboratory analyses of the soil samples collected from the borings for monitoring wells MW-2 and MW-3 indicated the presence of TPHg and BTEX compounds. The requested petroleum hydrocarbon constituents were not reported above laboratory detection limits in the soil samples collected form the MW-1 borehole. The wells were initially gauged and sampled in June 1994. Laboratory analyses of the water samples collected from MW-2 and MW-3 reported the presence of petroleum hydrocarbons in MW-2 and MW-3. The depth to water ranged from 15.33 to 16.71 feet below ground surface (bgs) with a groundwater gradient reported at 0.004 foot/foot to the east. KEI concluded to follow a three-month (quarterly) monitoring program.

In March 1995, two additional monitoring wells (MW-4 and MW-5) were installed at downgradient, off-site locations in the sidewalk along the opposite side of South Delaware Street from the site. Laboratory analyses of the soil samples collected from the monitoring well boreholes indicated the presence of TPHg and BTEX contamination in MW-4. The new wells were added to the quarterly groundwater monitoring program and were first sampled in April 1995. Laboratory analyses of the water samples collected from MW-4 and MW-5 indicated the presence of maximum concentrations of 150,000 micrograms per liter (µg/L) TPHg, 12,000 µg/L benzene, 40,000 µg/L toluene, 4,700 µg/L ethylbenzene, and 31,000 µg/L total xylenes reported in MW-4.

In January 1996, GeoStrategies (GSI) observed the excavation and removal of a 150 gallon capacity oil/water separator. A confirmation soil sample (OWS-S-4.5) was collected from underneath the oil/water separator at a depth of 4.5 feet bgs. Laboratory analysis of the sample indicated the presence of trace concentrations of TPHd, toluene, and total xylenes. Additionally, the presence of the heavy metals chromium, nickel, lead, and zinc were indicated at concentrations of 160 milligrams per kilogram (mg/kg), 99 mg/kg, 13 mg/kg, and 69 mg/kg, respectively. Tetrachloroethylene (PCE) and other chlorinated solvents were not present in the soil sample.

In February 1996, KEI supervised the advancement of three Geoprobe® soil borings (SP1, SP2, and SP4) at off-site locations. The soil borings were terminated at a depth of 13 feet bgs, with groundwater encountered at approximately 10.5 feet bgs. Grab groundwater samples were collected from each borehole. Laboratory analyses of the water samples reported low to moderate levels of TPHg, benzene, ethylbenzene, and total xylenes in the sample from boring SP-4. Petroleum hydrocarbon constituents were not reported above laboratory detection limits in the groundwater samples from borings SP-1 and SP-2.

In June 1996, Pacific Environmental Group, Inc. (Pacific) performed a well survey and reviewed California Department of Water Resources (DWR) well records. One documented well was identified within a ¼-mile radius of the site.

In December 2006 and January 2007, SECOR supervised the following activities: advancement of four direct push soil borings (SP-5 through SP-8), the installation of three soil vapor wells (VP-1 through VP-3) and four additional groundwater monitoring wells (MW-6 through MW-9), and the destruction of four groundwater monitoring wells

(MW-1, MW-2, MW-3, and MW-5). Laboratory analyses of soil samples collected indicated the presence of up to 1,300 mg/kg total purgeable petroleum hydrocarbons (TPPH, MW-6@16.5-17), 0.18 mg/kg benzene (MW-6@11-11.5), 32 mg/kg toluene (MW-6@11-11.5), 20 mg/kg ethylbenzene (MW-6@11-11.5), 110 mg/kg total xylenes (MW-6@11-11.5), and 0.089 mg/kg methyl tertiary butyl ether (MTBE, MW-6@19.5-20). Grab groundwater sample analytical results indicated the presence of up to 51,000 µg/L TPPH (SP-8), 1,300 µg/L benzene (SP-5), 1,500 µg/L toluene (SP-5), 3,000 µg/L ethylbenzene (SP-8), 9,600 µg/L total xylenes (SP-8), and 330 µg/L MTBE (SP-5). Groundwater samples from MW-6 and MW-9 reported petroleum hydrocarbons. Laboratory analyses of the soil vapor samples indicated the presence of up to 0.75 micrograms per liter (µg/L) TPPH (VP-3), up to 16 µg/L toluene (VP-1), 14 µg/L ethylbenzene (VP-3), 42 µg/L m,p-xylenes (VP-3), and 29 µg/L o-xylenes (VP-3).

Based on the results of this investigation, SECOR concluded that hydrocarbons in soil had been adequately delineated, the lateral extent of hydrocarbons in groundwater had been delineated up-gradient and cross-gradient, the lateral extent of hydrocarbons in deeper groundwater had been delineated to the southwest (cross-gradient) by SP-7, and that vapor inhalation did not appear to be an exposure pathway at the site. SECOR recommended installation of a downgradient well in the shallow water bearing zone and downgradient wells in the deeper water bearing zone along East Fifth Avenue and Delaware Street, and to the northwest and northeast (up and cross-gradient) of the site. SECOR recommended groundwater analyses and historical research to identify the possible source of tetrachloroethylene (PCE) in groundwater.

In August 2008, Stantec oversaw the installation of two shallow groundwater monitoring wells (MW-10 and MW-11), and four deeper zone wells (MW-12B, MW-13B, MW-14B, and MW-15B) at locations down-gradient of the subject site. This included the collection of both soil and groundwater samples from the new wells. Stantec also completed a sensitive receptor survey (SRS) as part of this investigation (see below). Stantec concluded that petroleum hydrocarbon plumes in groundwater had been delineated by the new wells, but recommended continued semiannual groundwater monitoring. No additional evaluation of sensitive receptors was recommended based on findings of the SRS (where no sensitive receptors were identified in the immediate down-gradient direction of the site).

Between 2009 and 2010, Delta Consultants prepared an investigation work plan to assess the PCE contamination in groundwater in the vicinity of the site. The San Mateo GPP did not accept the *Potential Source Evaluation and Tetrachloroethene (PCE) Source Evaluation Revised Work Plan on October 29, 2010.* Delta Consultants revised and resubmitted the work plan to the GPP.

In February 2011, Antea Group (formerly Delta Consultants) received conditional approval from the lead oversight agency, San Mateo County GPP, of their October 29, 2010 submittal titled *Potential Source Evaluation and Tetrachloroethene (PCE) Source Evaluation Revised Work Plan.*

Between May and June 2011, Antea Group oversaw the installation of one additional groundwater monitoring well MW-17B, and the advancement of six soil borings SB-1 and SB-3 through SB-7 to assess the potential up-gradient presence of PCE in soil and groundwater, as well as to further quantify the degree and extent of

on-site and downgradient hydrocarbon contamination associated with the subject site. Details of the investigation are presented in the July 2011 *Potential Tetrachloroethylene (PCE) Source Investigation Report*.

In April and May 2012, Antea Group completed additional delineation of gasoline contaminants in groundwater to the east and southeast of the USTs, as well as the determining whether or not the subject site is a likely contributor to the PCE contaminant plume present in the regional groundwater. Antea Group oversaw the installation of soil borings SB-8 and SB-9, temporary well TW-1, and monitoring wells MW-18 and MW-19. Also, Antea Group oversaw the destruction of shallow well MW-10, replaced with new well MW-10R at a deeper screened interval. Antea Group submitted the *Additional Site Investigation Report* summarizing the April and May field activities to the GPP on **July 6, 2012**.

On **September 7, 2012**, Antea Group submitted an *Additional Groundwater and Vapor Investigation Work Plan* to the GPP. In this Work Plan, Antea Group proposed installing two additional monitoring wells downgradient of wells MW-10R and MW-18, as well as two nested vapor wells adjacent to the neighboring, off-site buildings.

In March 2013, Antea Group installed monitoring wells MW-20 and MW-21 *Plan*, to further define the shallow groundwater contaminant plume, in general accordance with the *Additional Groundwater and Vapor Investigation Work Plan* dated September 7, 2012. In addition, soil boring SB-11 was advanced and monitoring well MW-11 was destroyed per GPP request.

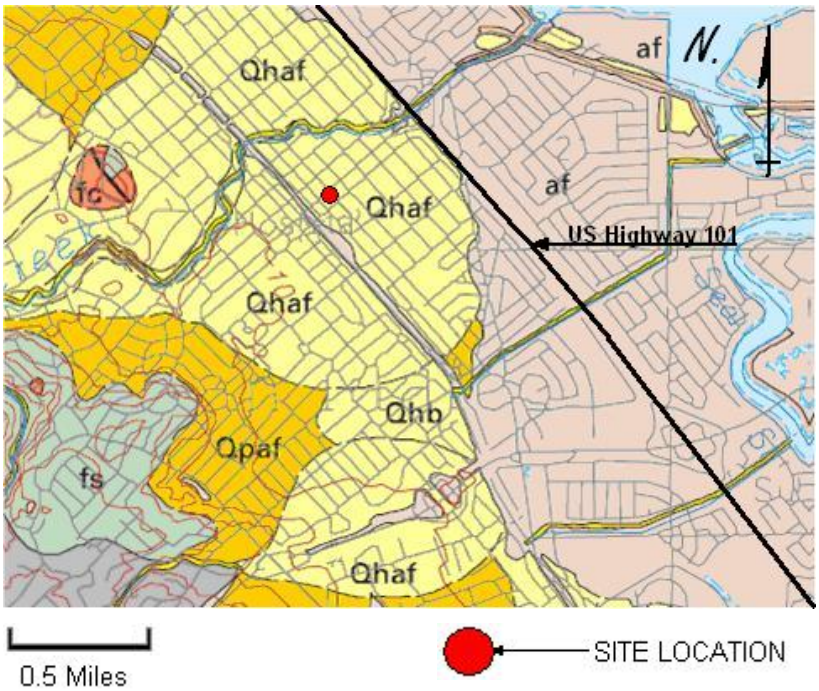
In June and July 2013, Antea Group installed monitoring wells MW-22 through MW-24 to assess the contribution of PCE from the former waste oil UST (MW-22), to assess PCE concentrations upgradient of the site (MW-23), and to further define the extent of the shallow groundwater contaminant plume (MW-24). Antea Group also advanced soil boring SB-10 to assess onsite shallow soil conditions near the tank pit. Antea Group submitted the *Additional Soil and Groundwater Investigation Report* summarizing field activities to the GPP on **July 17, 2013**.

In August 2013, Antea Group installed and sampled sub-slab soil vapor probes SS-1 through SS-4 off-site to assess soil vapor conditions within the hydrocarbon contaminant plume beneath the residential and commercial properties adjacent to and downgradient of the site. Vapor samples were collected in August 2013 and January/February 2014.

Sensitive Receptors

In 1996, a well survey was performed by Pacific. Four wells (three cathodic protection wells and one irrigation well) were identified within ¼-mile of the site. The City of San Mateo confirmed that there are two irrigation wells in Central Park (approximately 2,544 feet south of the site) and one irrigation well at King Center (approximately 3,648 north-northwest of the site).

Stantec performed a sensitive receptor survey within a ½-mile radius of the site during July 2008. A detailed parcel survey was performed at a 500-foot radius around the site. Research of the DWR well completion record database identified one irrigation well located approximately 2,208 feet north-northeast of the Site at 1015 2nd Avenue, San Mateo. The well was installed in 1953 to a depth of 46 feet bgs with a screened interval of 30 to 46 feet bgs. There was one surface water body (San Mateo Creek) identified within the limits of the ½-mile survey, approximately



1,488 feet north of the site. Additionally there may be a well located approximately 650 feet Northeast of the site at 728 E 4th Ave, San Mateo. This site was identified as the location of an inactive, former irrigation well during the course of an investigation by Stantec for a different site (Tosco 76 Station #4178, Former, T0608101115) in a 2009 Sensitive Receptor Survey (SRS). This SRS from 76 Station #4178 identified an additional sensitive receptor at 713 2nd Avenue, San Mateo approximately 1050 feet north of the site. This site is a preschool which utilizes sump pumps to dewater their basement, according the Stantec SRS, the preschool uses sump pumps to dewater the basement, which also serves as a classroom.

SITE SETTING

Regional Geologic Setting

The site is located on an alluvial plain extending from the Santa Cruz Mountains to the east to the San Francisco Bay. The geologic map of the vicinity below shows that the site is underlain by alluvial fan and fluvial deposits (Qhaf). Near the edge of San Francisco Bay, the deposits consist of medium dense sands that fine upward to sandy or silty clay (E.E. Brabb, et al., 1998). Other deposits in the area are heterogeneous artificial fill (af) and basin

Geologic Map of Vicinity

GEOLOGY OF THE ONSHORE PART OF SAN MATEO COUNTY, CALIFORNIA: DERIVED FROM THE DIGITAL DATABASE OPEN-FILE 98-137

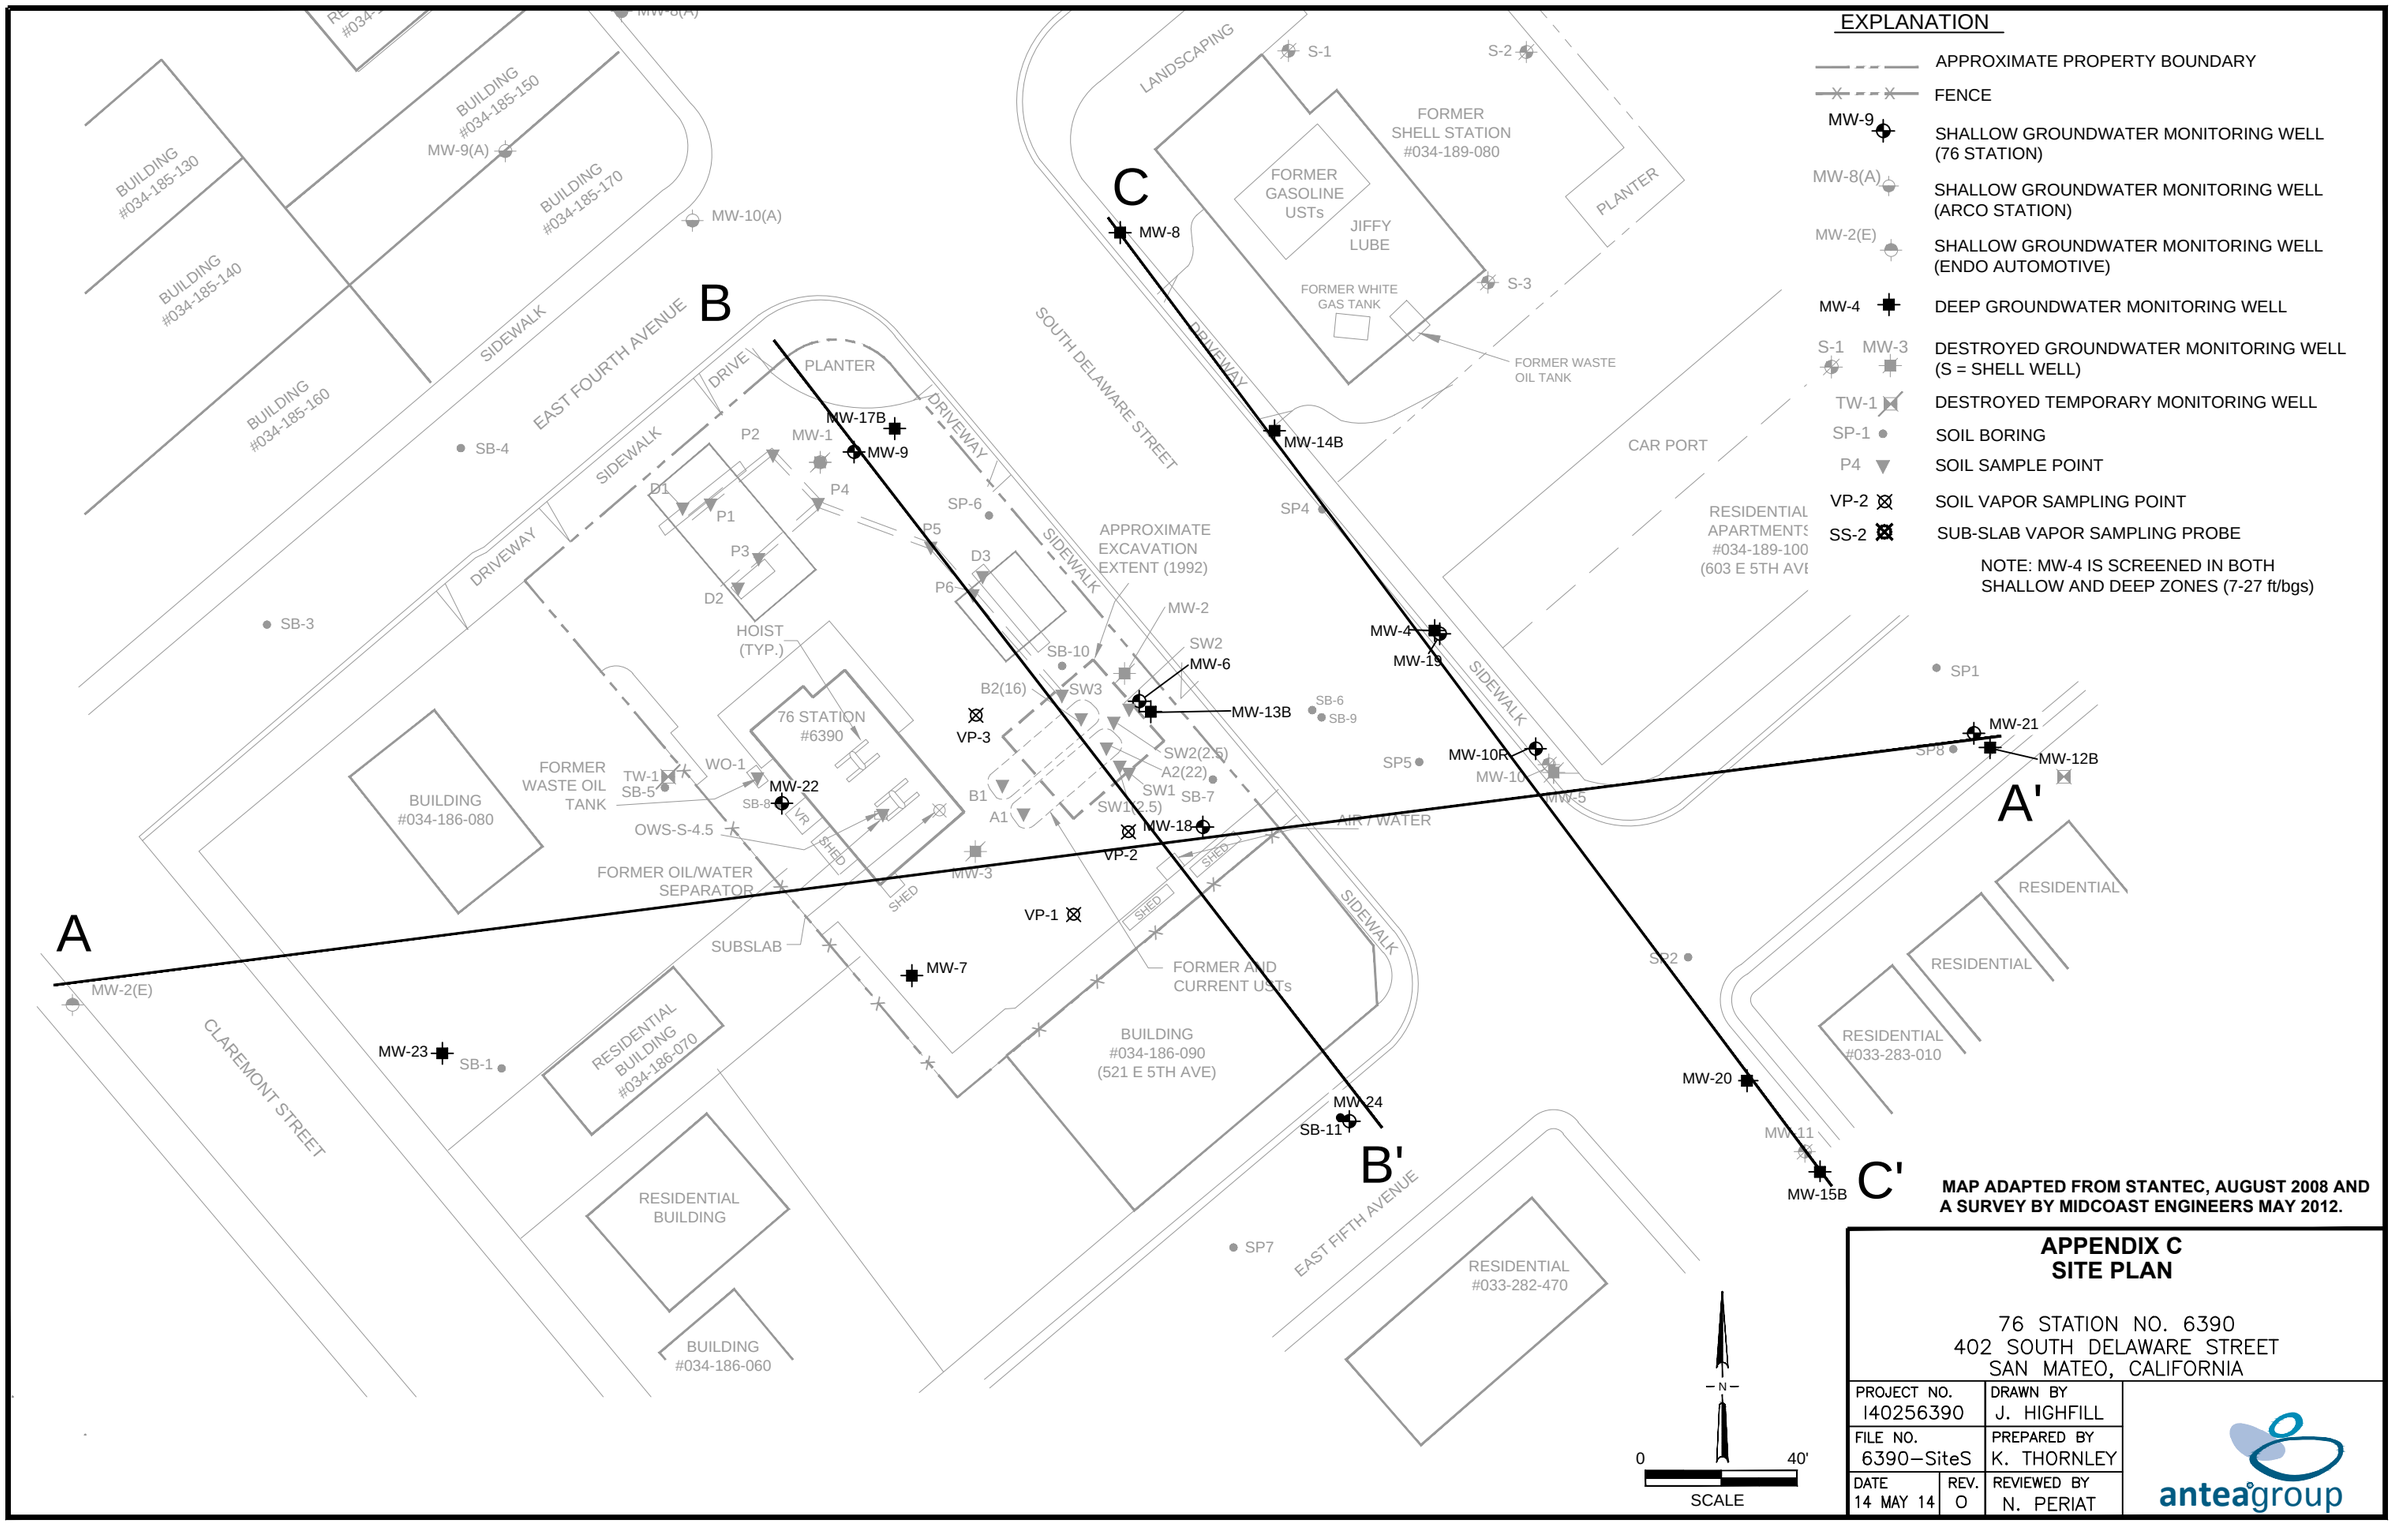
deposits (Qhb) consisting of fine silty clay to clay deposits.

Regional Hydrogeologic Setting

The site is located within the Santa Clara Valley groundwater basin and South Bay hydrologic planning area. Groundwater throughout the area flows typically northeasterly, originating in the Santa Cruz Mountains to the west and flowing towards San Francisco Bay. The basin is composed of alluvial fan deposits formed by tributaries to San Francisco Bay. The water-bearing formations comprise two groups; the Santa Clara Formation of the older Plio-Pleistocene age and the Quaternary age alluvial deposits. The shallow alluvial deposits overlie the Santa Clara Formation and have a maximum depth of about 1,250-feet.

Quaternary age alluvium consists of sand, gravel, silt, and clay deposits that are about 100-feet thick and average about 60-feet thick. The Pliocene age San Mateo Formation consists of deposits of marine sand, gravel, silt, and clay, which are locally water-bearing (DWR 2003).

The prominent groundwater flow direction is to the east.



Pacific Environmental Group, Inc. (Pacific) conducted a well survey and reviewed California Department of Water Resources (DWR) well records in June 1996. PEG only identified one documented cathodic protection well within a ¼-mile radius of the site.

Stantec conducted a sensitive receptor survey within a ½-mile of the site between July 2008 and August 2008 (Stantec 2008). A detailed parcel survey was performed at a 500-foot radius surrounding the site. The parcel survey identified 12 properties with basements, two properties with a sump, and no properties with groundwater wells within the 500-foot radius. A field canvas by Stantec did not identify groundwater production wells, or accompanying facilities associated with groundwater production wells within the search radius. In addition, California Water Service Company, the primary water provider for the area, indicated that they did not have any water supply wells within ½-mile boundary of the survey area.

There is one surface water body identified within the limits of the ½ -mile survey. San Mateo Creek is located approximately 1,488-feet north of the site.

EXPLANATION

MW-7 (PROJ.4'N) — MONITORING WELL / BORING NAME; PROJECTED DISTANCE FROM CROSS SECTION

TOP OF CASING

WELL CASING / EXPLORATORY BORING

(<0.20 / NA) — SOIL SAMPLE LOCATION WITH ANALYTICAL DATA: GRO / PCE (mg/kg)

MONITORING WELL SCREEN

STATIC GROUNDWATER ELVEVATION (1Q14)

[260 / 110] — GROUNDWATER SAMPLE WITH ANALYTICAL DATA: GRO / PCE (µg/L)

DEPTH TO FIRST ENCOUNTERED GROUNDWATER

{140 / NA} — SOIL VAPOR PROBE WITH ANALYTICAL DATA: GRO / PCE (µg/m³)

TD=27.5' (1/2/07) — TOTAL DEPTH; DATE INSTALLED

FINES (CLAY, SILT)

SILTY / CLAYEY SANDS / GRAVELS

SAND / GRAVEL

APPROXIMATE STRATIGRAPHIC BOUNDARY -DASHED WHERE INFERRED

NOTES:

1) <0.50 = BELOW THE LABORATORY'S INDICATED REPORTING LIMIT
GRO = GASOLINE RANGE ORGANICS
PCE = TETRACHLOROETHANE
NA = NOT ANALYZED
mg/kg = MILLIGRAMS PER KILOGRAM
µg/L = MICROGRAMS PER LITER
a =GRO PRIMARILY CONTAINED COMPOUNDS NOT FOUND IN TYPICAL GASOLINE.
b =REPEAT ANALYSIS OF GRO YIELDED INCONSISTENT RESULTS. THE CONCENTRATIONS APPEAR TO VARY BETWEEN THE BOTTLES. THE HIGHEST VALID RESULT IS REPORTED.
k = REPORTING LIMITS (PQL OR MDL) WERE RAISED DUE TO THE HIGH LEVEL OF ANALYTE PRESENT IN THE SAMPLE ("D4")
e = THE PQL'S AND MDL'S WERE RAISED DUE TO SAMPLE DILUTION.
* = ATYPICAL PATTERN. GASOLINE VALUE TO CHLORINATED COMPOUNDS.

2) STRATIGRAPHY BETWEEN BORINGS IS INTERPRETIVE.

3) SOIL AND GROUNDWATER SAMPLES FOR SOIL BORINGS COLLECTED ON THE DATE OF DRILLING. GROUNDWATER SAMPLES FOR ACTIVE MONITORING WELLS COLLECTED DURING THE AUGUST 2, 2006 (ENDO AUTOMOTIVE) AND JANUARY 28, 2014 (76 SERVICE STATION) SAMPLING EVENTS . MW-3 WAS SAMPLED ON AUGUST 2, 2006.

San Jose, CA 95112

Subject : 19 Water Samples
Project Name : 256390
Project Number :

Dear Ms. Periat,

Chemical analysis of the samples referenced above has been completed. Summaries of the data are contained on the following pages. Sample(s) were received under documented chain-of-custody. US EPA protocols for sample storage and preservation were followed. Testing procedures comply with the 2003 NELAC and TNI 2009 standards. Laboratory results relate only to the samples tested. This report may be freely reproduced in full, but may only be reproduced in part with the express permission of Kiff Analytical, LLC.
Kiff Analytical, LLC is certified by the State of California under the Environmental Laboratory Accreditation Program (ELAP), lab number 08263CA.
If you have any questions regarding procedures or results, please call me at 530-297-4800.

Sincerely,

Troy G. Turpen

Case Narrative

Matrix Spike/Matrix Spike Duplicate results associated with sample FD1_20140131 for the analytes Ethylbenzene and P + M Xylene were affected by the analyte concentrations already present in the un-spiked sample.

Repeat analysis of sample MW-22_20140131 by method EPA 8260B for Tert-Butanol yielded inconsistent results. The concentrations appear to vary between the bottles. The highest valid result is reported.

Repeat analysis of sample MW-7_20140131 by method EPA 8260B for TPH as Gasoline yielded inconsistent results. The concentrations appear to vary between the bottles. The highest valid result is reported.

The Method Reporting Limit for Ethanol has been increased due to the presence of an interfering compound for sample MW-21_20140131.

Sample results for MW-12B_20140131, MW-13B_20140131, MW-14B_20140131, MW-15B_20140131, MW-20B_20140131, MW-23B_20140131, and MW-7_20140131 reported as TPH as Gasoline do not exhibit a typical Gasoline chromatographic pattern. The reported values are primarily attributed to the presence of non-gasoline compounds.

The parameter 'Gasoline Hydrocarbons' was calculated by adding up the chromatographic peaks between hexane and dodecane (C6 to C12), subtracting the non-gasoline compounds (primarily Dichloroethene, Trichloroethene, and Tetrachloroethene), and comparing against a gasoline calibration curve.

A version of this report was previously issued on 05/13/14. The Gasoline Hydrocarbons added to this revised version replaces that report.

Analytical Lab Used and Report # (if any): KIFF 87262

1.	Were the analyses the ones requested?	**Yes** / **No**
2.	Do the sample number(s) on the chain-of-custody (COC) match the one(s) that appear on the laboratory data sheet?	**Yes** / **No**
3.	Were samples prepared (extracted, filtered, etc.) within EPA holding times?	**Yes** / **No**
4.	Once prepared/extracted, were the samples analyzed within the EPA holding times?	**Yes** / **No**
5.	Were Laboratory blanks performed, if so, were they non-detect?	**Yes** / **No**
6.	Are the units correct? (i.e., soil samples in mg/kg or ug/g, water samples mg/L, ug/L, and air samples in volume mg/m^3,etc.)	**Yes** / **No**
7.	Were appropriate Matrix Spike (MS) and Matrix Spike Duplicate (MSD) samples included in the laboratory batch sample?	**Yes** / **No**
8.	Were blank spike (SS or LCS) or blank spike duplicate (SSD or LCSD) samples included in the laboratory batch samples?	**Yes** / **No**
9.	Were QA/QC samples (MS/MSD, SS/SSD, LCS/LCSD) within the shown acceptable range of % recovery?	**Yes** / **No**
10.	Were MS/MSD (or SS/SSD) values used to calculate Relative Percent Difference (RPD)?	**Yes** / **No**
11.	Were Relative Percent Difference values within the acceptable range (i.e. ±25%)?	**Yes** / **No**
12.	Were surrogate recoveries within the acceptable range (i.e. ±30%)?	**Yes** / **No**

For a 'no' answer, explain why and what corrective action was taken (use additional sheet(s), as necessary:

Matrix Spike/Matrix Spike Duplicate results associated with sample FD_20140131 for the analytes Ethylbenzene and P + M Xylene were affected by the analyte concentrations already present in the unspiked sample.

Appendix E

Historical Document

Tug Near S. F. On 2500-Mile Tow Operation

SAN FRANCISCO (AP)—One of the longest tows in the history of ocean barge operations will be completed here today when the tug Marion Moran out of New York slips under the Golden Gate bridge with an army floating machine shop it has towed more than 5200 miles around the continent.

The barge-housed machine shop 210 feet long with a beam of 40 feet—is destined for use at the ship storage area at Rio Vista in the Sacramento river. It was taken in tow, with a similar shop, which was dropped at New Orleans, on September 29.

Both tugs are owned by the Moran Towing company of New York, operated by Adm. Emond J. Moran, USN (retired).

News of Parkside

By BEULAH GAWLAS

1629 Dolan Avenue — DIamond 4-7770

Mr. and Mrs. Earl Mc Elroy were hosts at their home, 1760 Washington street, for a costume Halloween party given for the children of the 1700 Washington block sewing circle and their niece and nephew, Mike and Sharon Mc Elroy.

Thirty-three children, ranging in age from 1½ years to 14, attended the party, held in the garage decorated with Halloween decorations made by the children of Mr. and Mrs. Charles Arrigoni, Mr. and Mrs. Maurice Chatigny, Mr. and Mrs. Frank Cleary and Mr. and rs. Albert Manrubia.

Members of the sewing circle assisted with refreshments.

Miss Lynn Neison of San Francisco, visiting her sister, Mrs. Henry Hinds, 1725 Hamlet, assisted with the picnic at San Mateo Central park given in honor of her nephew, Peter Hind, on his third birthday October 30.

Attending the picnic were Peter's brother, John; Mrs. Jack Haworth and children, Diane and Mark, of Menlo Park; Mrs. Milton McDouell and children, Christine and Ronald, of Millbrae; Mrs. Thomas Bennie, and children, Timmy, Tommy and Barbara; Mrs. John McNesby and son, Tommy, and Mrs. Mike Heeger and daughters, Laura and Susan.

Miss Rose Carrion of New York will divide her month's vacation between friends in San Francisco and her cousin, Mrs. Leonard Nelson, and family at 1415 Pershing.

Mrs. Ruth Raymond of San Francisco, spent the week end with her daughter, Mrs. George Kershaw, 1678 Taylor, and sons, Douglas and Donald, while Mr. Kershaw went deer hunting out of Sacramento.

Mr. and Mrs. Bob Flickinger, 1685 McKinley, celebrated their twelfth wedding anniversary October 31 with a dinner in San Francisco and seeing a show.

New neighbors at 1729 Hamlet are Mr. and Mrs. Lawrence Gallick, who moved from San Francisco to their new home on October 18 with their children, Eddie, in the sixth grade at Sunnybrae school; Mildred, in kindergarten; Johnny, 4, and Danny 1.

Mrs. Edith Stahl arrived in California October 23 from Bonn on the Rhine, Germany, for a year's visit. Mrs. Stahl, house guest of her brother-in-law and sister, Mr. and Mrs. Richard Krause, San Bruno, spent October 25 with her niece, Mrs. Paul Zem, and family, 1668 McKinley. It was her first visit with her niece in 30 years. Mrs. Zem held a family dinner party for Mrs. Stahl last night. Attending were Mr. and Mrs. Krause and Mrs. Zem's brother, Conrad Kauhausen, home on leave from Japan. Mr. Zem's parents, Mr. and Mrs. John Zem, and Mr. and Mrs. Clarence Loranzana came down from San Francisco for the evening.

Neighborliness in Parkside:

Frank Cleary took time to rototil the back yards of his neighbors, J. H. Dorris and Barney Ritter, last Sunday.

Lee Roberts helped Jack Singer with his patio.

Sherry and Pamela Dorris spent Sunday with their cousin, Alice Dorris, at 1757 Washington, while their parents, Mr. and Mrs. W. H. Dorris of Burlingame attended the 49er game in San Francisco.

Two Youths Escape Reception Center

SACRAMENTO (UP)—Authorities in the Sacramento area were on the lookout today for two youths who scaled a high wire fence to escape from the California Youth Authority reception center in near-by Perkins.

James Eva, superintendent of the center, said Terry Ault, 17, committed from Sonoma county for auto theft, and 16-year-old Donald McDougall, committed from Mendocino county for auto theft and petty theft, escaped while returning from dinner last night.

200 to Attend Scout Bivouac

More than 200 Explorer scouts are expected to participate in the Explorer bivouac, which will be held this week end, November 6 and 7, at Camp Pomponio, south of La Honda, by the San Mateo Council Boy Scouts of America. The bivouac will be a chance for Explorers to meet and enter competitive events to test their woods and camping skills. This is a high adventure event with demonstrations of logging, first aid, mountaineering and Indian lore.

Highlight of the bivouac will be provided by A. M. "Chief" Venne, an Ojibwa Indian chief, member of the Council Summer camp staff, who will direct Indian ceremonials and show Indian handicrafts, costuming and Indian lore. The chief was an athletic coach at Haskell and Carlisle and worked with Jim Thorpe when Thorpe first arrived at Carlisle. The young men from Explorer posts and crews will enter Camp Pomponio rain or shine by way of Portola State park carrying all food, shelter and cooking and sleeping gear on their backs.

Judge Louis B. DeMatteis, council chairman of the activities committee, announced that this event marked a beginning of a program to heighten the adventure offered to Explorers of the council.

Many of the Explorer advisors from all over the council will be on hand to assist the young men who are putting the program on. Hubert Pate, and Explorer scout of Burlingame, is the chairman of the bivouac committee which was made up of Explorers from each unit. Morris Boley of Millbrae is acting as advisor to the committee.

Sheppard Trial Juror Dismissed

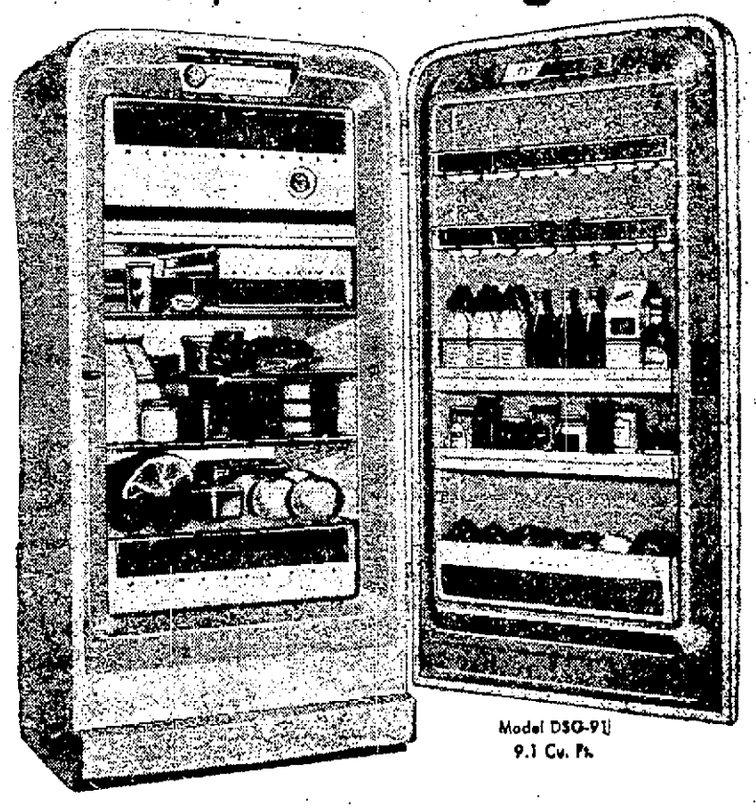
CLEVELAND (UP)—The Sheppard murder trial show got on the road today when Judge Edward Blythin dismissed a disputed juror who stated that publicity about a morals offense he committed 11 years ago had brought him near a nervous breakdown.

Judge Blythin, who yesterday was re-elected to the court of common pleas bench, excused juror No. 6, James R. Manning, 38, in a taut courtroom scene in which Manning took the witness stand and said he was "physically and mentally unfit, to serve on the jury.

As Dr. Samuel H. Sheppard, the 30-year-old osteopath who is accused of bludgeoning his pregnant wife to death, sat with tightly clasped hands, Blythin excused Manning and instructed the first alternate juror, Jack N. Hansen, to take jury seat No. 6.

Batista Re-elected In Cuban Walkaway

HAVANA (UP)—President Fulgencio Batista has won re-election by an absolute majority of Cuba's 2,300,000 eligible voters, despite an opposition "boycott" of the polls, unofficial returns showed today.



Late figures gave Batista 1,216,389 votes to 137,425 for ex-President Ramon Grau San Martin, who quit the race last week.

See the New, Smart Copper-Styled Westinghouse Food File Refrigerator

A Special Place... A Special Cold
for each and every kind of food

This new Westinghouse Refrigerator gives you 100% *organized* storage space for any type of food... frozen, cooked or fresh... with just the right cold to keep it safely. And it's color harmonized in new, smart copper styling to add that touch of distinction to your kitchen.

of WARDROBE CLEANERS

New San Mateo Location

333 EAST 4th AVENUE

YES—TO SERVE YOU BETTER—WE ARE NOW LOCATED IN BOTH BURLINGAME AND SAN MATEO

We cordially invite you to come in and inspect our new San Mateo store. You'll find here the same fine service you're always found (and still do, of course!) at our Burlingame plant at 352 Lorton—Martinizing, More Than Dry Cleaning—pick up and delivery service—one day service at no extra charge when you need it—expert spotters and pressers—all the attention to detail you've come to expect of us over the years we've been privileged to serve you. So come in and say "Hello" to us at our new location, won't you?

The Following Are Proud to Offer Congratulations on the New Wardrobe Cleaners

SITE SCREENING FORM

Site Name: Wardrobe Cleaners

Site Location: 335 East 4th Street, San Mateo, San Mateo County, California, 94401

Calsites Identification 41720094 (if applicable)

Site Summary:

Site Owner/Operator: Do S. Park June 1994 – Present

The property is located approximately ¼-mile northeast of El Camino Real on the northwest corner of East Fourth Street and Railroad Avenue. The subject site consists of a one-story, poured-in-place concrete structure, built to the property boundaries. The subject site was constructed and occupied by 1939. Prior business that operated at the subject site include a blacksmith shop, a cab company, and upholstery shop, a plumbing supply store, a convenience store and a Mexican restaurant/bar. Dates and duration of operations for the past businesses are unknown. It was determined that the original construction included bare dirt floors with final completion of the slab being completed in the past twenty years. Given the prior uses for the site, there is a potential for subsurface soil to be impacted with constituents consistent with a blacksmith shop and auto-related business including metals, acids, fuels, waste oil or other related products.

Dry cleaning operations at the site began in 1995. As part of daily operations, perchloroethylene (PCE) was used. Approximately 16-gallons of PCE waste products were generated each month. Wardrobe Cleaners has held a permit to operate with the San Mateo County Environmental Health Department (SMCEH) and the Bay Area Air Quality Management District (BAAQMD). No major violations or reports of releases/spills have been reported during the entirety of their operations. PCE supplies were provided by S.B. Supply Company. Transportation and disposal of hazardous waste material was provided by Safety-Kleen Corporation. All appropriate manifests have been submitted.

Status Recommendation: PEAR

Rationale/Supporting Documentation: Possible subsurface contamination due to prior uses may exist at the site. Offsite contaminant migration via the groundwater pathway may possibly increase risk of exposure. However, groundwater beneath the site may

have already been impacted due to the property's vicinity to several sites with reported groundwater impaction.

MEMORANDUM

TO: DTSC Files for Wardrobe Cleaners
335 East 4th Street
San Mateo, San Mateo County

FROM: Edgardo Gillera
Hazardous Substances Scientist
Site Mitigation and Brownfields Reuse Program

DATE: April 15, 2005

SUBJECT: NO ACTION DETERMINATION

The subject site was constructed and occupied in 1939. Prior to Wardrobe Cleaners, past businesses that operated at the site included a blacksmith shop, a cab company, an upholstery shop, a plumbing supply store, a convenience store and a Mexican restaurant/bar. It was determined that the original construction included bare dirt floors with final completion of the slab being completed in the past twenty years. Given the prior uses for the site, there is a potential for subsurface soil to be impacted with hazardous substances consistent with a blacksmith shop and auto-related business. Dry cleaning operations at the site began in 1995

On August 2003, a DTSC site screening was conducted for this site (Calsites ID 41720094) and recommended that a Preliminary Endangerment Assessment be conducted for the site to determine if any hazardous substances have been release due to past site uses.

Subsequent to the site screening, information request letters were submitted to the current owner and operator Do S. Park to assure that DTSC had received all available environmental data and to determine if any hazardous substances release has occurred at the site. Response from the owner indicated that dry cleaning operations occurred offsite and that no hazardous substances were stored or generated onsite. Therefore, the likelihood of release at this property based on past uses is minimal. Based on this information, no other action is required.

Vapor Assessment Report

76 Service Station No. 6390
402 South Delaware Street, San Mateo, California
San Mateo County Groundwater Protection Program
Case No. 110069

1.0 INTRODUCTION

Antea®Group has prepared this *Vapor Assessment Report* for 76 Service Station No. 6390 at 402 South Delaware Street, San Mateo, California (**Figure 1**) to document installation and sampling of sub-slab vapor points SS-1 and SS-2 at 521 East 5th Avenue and SS-3 and SS-4 at 603 East 5th Avenue, and sampling of on-site vapor wells VP-1 and VP-3. This vapor assessment was completed in accordance with correspondence from the San Mateo County Groundwater Protection Program (GPP) dated January 29, 2013 (**Appendix A**). A site description, hydrogeologic setting, history of release, and summary of previous investigations are included in **Appendix B**.

1.1 Site Description

The site is currently occupied by an active 76 Service Station, located on the south corner at the intersection of East Fourth Avenue and South Delaware Street in San Mateo, California. The station is located approximately one mile west of San Francisco Bay at an elevation of approximately 20 feet above mean sea level (**Figure 1**). The site facilities currently include two fuel underground storage tanks (USTs) located in a common pit in the southeast portion of the property, three product dispenser islands, and a station building (**Figure 2**). The site is located on an alluvial plain extending from the Santa Cruz Mountains, east to the San Francisco Bay within the Santa Clara Valley groundwater basin and South Bay hydrologic planning area.

2.0 SUB-SLAB VAPOR POINT INSTALLATION

Vapor point construction details are included in **Table 1**, and historical vapor analytical data is contained in **Table 2**. All vapor sampling locations are depicted on **Figure 2**.

2.1 Pre-field Activities

Prior to initiation of field activities, Antea Group contacted the property owners of 521 East 5th Avenue and 603 East 5th Avenue and obtained access agreements to install and sample the sub-slab vapor points. Antea Group also produced a Health and Safety Plan (HASP) in accordance with Title 8, Section 5192 of the California Code of Regulations (CCR). The HASP contained a list of emergency contacts, as well as a hospital route map to the nearest emergency facility.

Prior to field mobilization, an Underground Service Alert (USA) ticket was opened and the proposed vapor point locations were marked and cleared for subsurface obstructions or hazards. In addition, Antea Group subcontracted

a private locator to clear the proposed vapor point locations. Antea Group notified the GPP of field activities at least 48 hours prior to commencing work.

2.2 Vapor Point Installation

On August 19, 2013, Antea Group installed SS-1 through SS-4. Antea Group utilized the Vapor Pin™ for sub-slab point installation. The Vapor Pin™ is a proprietary vapor probe which consists of a 4-inch long steel probe surrounded by a silicone sleeve. A stainless steel tube is connected to the base of the Vapor Pin™ which was adjusted to the depth of the slab. To install the probe, a 1.5-inch hole was drilled to approximately 1-inch below the slab surface, and then a 5/8-inch hole was drilled through the 1.5-inch hole until soil was observed on the drill bit. The probe was then driven into the 5/8-inch hole, which is slightly narrower than the width of the silicone seal, making an air tight seal when installed. Once installed, the probe was sealed with an air tight silicone slip cap, and covered with a secure plastic flush-mount cover.

Slab thickness was measured to be approximately five inches in the locations of SS-1 and SS-2, and twelve-inches in the locations of SS-3 and SS-4 (**Table 1**).

3.0 VAPOR SAMPLING

Antea Group conducted a warm season sampling event on August 22 and 23, 2013 and a cold season sampling event on January 14, 2014 at sub-slab vapor points SS-1, SS-2, SS-3 and SS-4 and on-site vapor wells VP-1 and VP-3 per the GPP's request.

The following complications occurred during the cold season sampling event:

- The Summa containing the SS-4 sample was depressurized before returning to the laboratory for analysis, so SS-4 was immediately resampled on January 21, 2014.
- Due to a significant discrepancy between the parent and duplicate sample results, generally abnormal results for SS-1, SS-2 and SS-3 from the warm season sampling event, and a significant helium leak in SS-1, these points were resampled on February 20, 2014.

The Summa canisters used to collect VP-1 and VP-2 were from a separate canister batch, so the data collected on January 14, 2014 was accepted. The February 20, 2014 event utilized 6-liter Summas and analysis method TO-15 SIM to meet screening levels based off a 0.05 attenuation factor for sub-slab to indoor air as recommended by the Department of Toxic Substances Control (DTSC). Field data sheets are contained in **Appendix C**.

Prior to sampling, Antea Group assembled the sampling train, which consisted of a sample Summa canister (1 or 6-Liter; refer to **Section 3.4**) and a second 6-liter Summa canister for system purging. The sample train consisted of a short piece of tubing connecting the vapor point to a plug valve, connected to a T-fitting which enabled the

sampling canister and the purge canister to be in-line at the same time. All Summa canisters were equipped with a vacuum gauge connected to the top of a regulator set at a flow rate of approximately 150 milliliters/minute (mL/min).

3.1 Shut-in Test

Prior to sample collection, a shut-in pressure test of the sampling train between the Summa canisters and the Swagelok plug valve was performed for five minutes by opening and closing the purge canister valve. The vaportight Swagelok plug valve remained closed during the process. The initial vacuum reading on the Summa was noted, and if that vacuum was not maintained for five minutes, the sampling train was fixed until the vacuum was maintained. The pressure test ensures that the sampling manifold is an air-tight system so that only vapors from beneath the slab are being captured.

3.2 Helium Shroud Emplacement

After the shut-in test, the plug valve was opened and a helium shroud was placed over the vapor point and plug valve connection. A line to feed helium was placed in the shroud, in addition to a helium detector rod. The base of the shroud was sealed onto the ground surface with hydrated bentonite. Helium was fed into the shroud slowly until a concentration of approximately 40% to 60% was achieved. Antea Group monitored the helium concentration for five minutes prior to initiation of purging to ensure that the helium atmosphere was relatively stable.

3.3 Vapor Purge

After the helium shroud had equilibrated, the sub-slab vapor point was purged at a rate of approximately 150 ml/min by opening the valve of the 6-liter purge Summa canister until 2-liters had been purged, per Environmental Protection Agency (EPA) guidelines[1]. Antea Group assured that 2 liters of vapor were purged from each point by monitoring the drop in pressure in the 6-liter purge Summa canister. The starting pressure on a 6-liter Summa is 30 inches mercury (in Hg), so the pressure drop for a 2-liter purge was approximately 10 in Hg.

3.4 Observations During Sample Collection

The following table presents a summary of field data collected during the August 22nd sampling of SS-1, SS-2, SS-3, SS-4 and the August 23rd sampling of VP-1 and VP-3.

Sub-slab Point Name	Summa Canister Volume (Liters)	Total Sample Time (minutes)	Change in Pressure (in Hg)	Sample Rate (mil/min)	Lowest Helium % in Shroud, during sampling

[1] EPA, Standard Operating Procedure (SOP) for Installation of Sub-Slab Vapor Probes and Sampling Using EPA Method TO-15 to Support Vapor Intrusions Investigations.

Sub-slab Point Name	Summa Canister Volume (Liters)	Total Sample Time (minutes)	Change in Pressure (in Hg)	Sample Rate (mil/min)	Lowest Helium % in Shroud, during sampling
SS-1	1	5	25	167	44
SS-2	1	6	24	133	44
SS-3	1	6	24	133	42
SS-4	1	8	24	100	44
DUP-1	1	8	24	100	44
VP-1	1	7	25	119	41
VP-3	1	7	25	119	40.6

The following table presents a summary of field data collected during the January 14th sampling of VP-1 and VP-3, the January 21st sampling of SS-4, and the February 20th sampling of SS-1, SS-2 and SS-3.

Sub-slab Point Name	Summa Canister Volume (Liters)	Total Sample Time (minutes)	Change in Pressure (in Hg)	Sample Rate (mil/min)	Lowest Helium % in Shroud, during sampling
SS-1	6	36	20	111	40.3
SS-2	6	31	21	135	40.1
SS-3	6	33	22	133	40.1
SS-4	1	8	25	104	43
VP-1	6	41	25.5	124	47
VP-3	6	48	26	108	46

Antea Group used flow regulators set to 150 milliliters/minute (mil/min), indicating that air flow may have been slightly restricted by the subsurface during sampling; however, all samples were collected within the acceptable range of sampling rates recommended by the DTSC (50 to 200 ml/min). Helium percentages were maintained above 40% during sampling. In-line vacuum gauges between the flow regulator and vapor point/well were also utilized during sample collection to monitor potentially induced vacuum in the vapor points/wells. In-line vacuum gauges remained at zero during collection of all samples.

3.5 Sample Analyses

Antea Group submitted the air sample canisters to Calscience Evironmental Laboratories Inc (Calscience), a National Environmental Laboratory Accreditation Program (NELAP) certified lab (certification No. 03220CA) and requested that samples be analyzed for the following (**Appendix D**):

- Gasoline range organics (GRO) by EPA Test Method TO-3M;
- Benzene, toluene, ethylbenzene and xylenes (BTEX compounds), methyl tertiary butyl ether (MTBE), tertiary butyl alcohol (TBA), diisopropyl ether (DIPE), ethyl tertiary butyl ether (ETBE), tertiary amyl methyl

ether (TAME) 1,2-dichloroethane (1,2-DCA), ethylene dibromide (EDB), ethanol, naphthalene and tetrachloroethane (PCE) by EPA Test Method TO-15 or TO-15 SIM;

- Fixed gases: Helium, oxgen/argon, carbon dioxide and methane by ASTM D-1946 or ASTM D-1946 (M).

Prior to December 2013, Antea Group used shallow soil gas Environmental Screening Levels (ESLs) established by the San Francisco Bay Regional Water Quality Control Board (SFRWQCB) for comparison to sub-slab concentrations. The December 2013 ESL revisions resulted in sub-slab screening levels being based on indoor air attenuation factors. For naphthalene, the TO-15 SIM analysis was required to meet the screening level.

4.0 LABORATORY ANALYTICAL RESULTS

A summary of analytical results are provided in **Table 2**, and GRO, benzene and PCE concentrations are shown on **Figure 3**.

4.1 Volatile Organic Compound (VOC) Results

The following sections present VOC analytical results in comparison to three risk categories : 1) Shallow soil gas for commercial/industrial land use (VP-1 and VP-3) ; 2) sub-slab screening level derived from 0.05 attenuation factor for commercial/industrial indoor air (SS-1 and SS-2) ; and 3) sub-slab screening level derived from 0.05 attenuation factor for residential indoor air (SS-3 and SS-4).

Laboratory analytical reports are included in **Appendix B** and soil vapor analytical data is tabulated in **Table 2**.

4.1.1 Shallow Soil Gas Results (VP-1 and VP-3)

Only ethanol and PCE were reported above the laboratory reporting limits (LRLs) in VP-1; all other analytes were not reported above the LRLs during the warm and cold season sampling events. The PCE concentrations were below the established shallow soil gas ESL during the August 2013 and January 2014 sampling events. Currently, there is no established screening level for ethanol vapor concentrations. In VP-3, BTEX compounds, ethanol and PCE were reported at concentrations below the ESLs during the August 2013 and January 2014 sampling events. These results appear to be generally consistent with low to non-detect contaminant concentrations reported during the 2007 sampling events.

4.1.2 Sub-Slab Points SS-1 and SS-2 (Commercial Land Use)

Vapor points SS-1 and SS-2 are located in a currently vacant office building which will be converted into a dental office in the near future. Due to the intended building use, screening levels for SS-1 and SS-2 were established based on a 0.05 attenuation factor for indoor air quality in commercial/industrial use buildings.

PCE concentrations in SS-1 and SS-2 exceeded the screening level of 42 micrograms per cubic meter (µg/m^3) during the August 2013 and February 2014 sampling events. In SS-1, PCE was reported at 2,200 µg/m^3 in August and 2,100 µg/m^3 in February. In SS-2, the PCE concentrations were 88 µg/m^3 and 53 µg/m^3, respectively.

GRO and BTEX compounds were reported in one or both sub-slab points at concentrations below the screening levels. Ethanol was reported up to 17 µg/m^3 (SS-1, August 2013), however there is currently no indoor air screening level for ethanol.

Naphthalene reporting limits were above the screening level during the August sampling event, however during the February sampling event, naphthalene was reported at 0.16 µg/m^3 and 0.20 µg/m^3 in SS-1 and SS-2, respectively, which are below the screening level of 7.2 µg/m^3.

EDB results for all sampling events were slightly above the screening level of 3.4 µg/m^3. Calscience does not have the capability to perform a SIM analysis for EDB; however they attempted to J-flag the February 20, 2014 data (estimating concentrations between the method detection limit and reporting limit), and no samples were J-flagged for EDB. Method detection limits (included in **Appendix D**) for EDB ranged from 0.53 µg/m^3 to 0.68 µg/m^3 which are below the screening level. 1,2-DCA was not detected above laboratory reporting limits in any sample, however only the reporting limit from SS-2 during the cold season sampling event was below the screening level of 2.40 µg/m^3.

4.1.3 Sub-Slab Points SS-3 and SS-4 (Residential Land Use)

Vapor points SS-3 and SS-4 are located in residential apartments; hence screening levels for analyte concentrations reported in SS-3 and SS-4 were established based on a 0.05 attenuation factor for indoor air quality in residential use buildings.

Only low levels (below screening levels) of GRO, BTEX compounds, PCE and naphthalene were reported in vapor points SS-3 and SS-4 during the August and January/February sampling events. Ethanol was reported in SS-4 during each sampling event at 170 µg/m^3 during the August 2013 sampling event and 20 µg/m^3 during the January 2014 sampling event. There is currently no indoor air ESL for ethanol.

Naphthalene reporting limits were above the screening level during the August and January sampling of SS-3 and SS-4, however during the February re-sampling of SS-4, naphthalene was reported at 0.18 µg/m^3 which is below the screening level of 1.44 µg/m^3.

EDB results for all sampling events were above the screening level of 0.68 µg/m^3; however no EDB concentrations were J-flagged as described in **Section 4.1.2**. Method detection limits (provided in **Appendix D**) ranged from

0.53 µg/m^3 to 0.68 µg/m^3 which are at or below the screening level. Reporting limits for 1,2-DCA during the August 2013 sampling event were above the screening level of 2.40 µg/m^3.

4.2 Fixed Gas Results

The fixed gas results from the warm and cold season sampling events demonstrated near atmospheric oxygen levels, and above atmospheric carbon dioxide levels. There were no detections of methane in any of the analyzed samples for all events. Helium was reported at trace to non-detect concentrations. The maximum calculated helium leak associated with viable results was in SS-1 at 1.4% during the February sampling event. Helium leak calculations are shown on **Table 2**.

5.0 QUALITY ASSURANCE/ QUALITY CONTROL (QA/QC)

5.1 Laboratory Report QA/QC

Antea Group performed a laboratory validation check on the Calscience analytical reports, which are presented as **Appendix D**. The following sections summarize the QA/QC findings of each report.

5.1.1 August 22 and 23, 2013 Sampling Event

Laboratory QA/QC Performed:	Yes (validated by Antea Group)
Field Duplicate (Duplicate collected at SS-4)	Relative percent difference between parent and duplicate sample (detections only): Ethanol (0%), carbon dioxide (2%), oxygen (0%), and helium (0.5%).
Laboratory Data Qualifiers:	No
Vacuum retained upon laboratory receipt?	Yes – ranged from -4inHg to -8inHg
Are the data valid for their intended purpose?	Yes, the data are valid

5.1.2 January 14, 2014 Sampling Event

Laboratory QA/QC Performed:	Yes (validated by Antea Group)
Field Duplicate (Duplicate collected at SS-3)	Relative percent difference between parent and duplicate sample: Benzene (7.41%), toluene (121%), ethanol (18%), carbon dioxide (5.2%), and oxygen (1.1%). These results were from a re-analysis after the laboratory was informed of the duplicate parent sample ID. RPD values were greater on original data. NOTE – O-Xylene, DIPE, and Helium were reported in parent sample only, RPD could not be calculated for these compounds.
Laboratory Data Qualifiers:	No
Vacuum retained upon laboratory receipt?	No – SS-4 was at 0.0 inHg upon receipt by the laboratory. Other samples ranged from -5.0 to -5.5 inHg.
Are the data valid for their intended purpose?	The data for SS-1, SS-2, SS-3 and SS-4 are not considered to be valid based on comparison with August data and differences between parent and duplicate data. Issue is likely due to a bad Summa canister batch. Data for VP-1 and VP-3 are considered to be valid since these canisters were from a separate sample batch.

The sample collected at SS-4 was returned to the laboratory without a vacuum. This sample was not analyzed by Calscience upon Antea Group's request, and Antea Group immediately resampled SS-4 (refer to **Section 5.1.3**). One duplicate sample was collected on January 14, 2014 from SS-3; analyte concentrations were significantly different in the parent and duplicate sample. Antea Group requested that the data be re-run, which resulted in minor improvement in relative percent difference (RPD), however all concentrations reported in SS-1, SS-2 and SS-3 appeared to be inconsistent with results from the August sampling event. For instance, there were analyte detections that were not reported in the August sampling event, with concentrations an order of magnitude higher than the August event reporting limits. Antea Group and the laboratory determined that a batch contamination may have caused data to be skewed. As a result, Antea Group resampled SS-1, SS-2 and SS-3 (refer to **Section 5.1.4**). Sample containers used for VP-1 and VP-3 were from a different batch and were considered to be valid.

5.1.3 January 21, 2014 Sampling Event

Laboratory QA/QC Performed:	Yes (validated by Antea Group)
Laboratory Data Qualifiers:	No
Vacuum retained upon laboratory receipt?	Yes – vacuum at -5.0 inHg
Are the data valid for their intended purpose?	Yes, the data is valid

5.1.4 February 20, 2014 Sampling Event

Laboratory QA/QC Performed:	Yes (validated by Antea Group)
Field Duplicate (Duplicate collected at SS-3)	Relative percent difference between parent and duplicate sample: P/M-Xylene (77.6%), ethanol (10.2%), PCE (12.9%), naphthalene (18%), carbon dioxide (2.12%), oxygen (0.52%). NOTE – Select BTEX compounds, and helium were reported in parent sample only, RPD could not be calculated for these compounds. GRO only reported in the duplicate sample.
Laboratory Data Qualifiers:	No
Vacuum retained upon laboratory receipt?	Yes – ranged from -8 inHg to -10inHg
Are the data valid for their intended purpose?	Yes the data are valid.

One duplicate sample was collected on February 20, 2014 from SS-3. All analytes which had detections in the parent and duplicate sample were within a 20% margin of variation, with the exception of P/M-Xylene. Benzene, toluene, ethylbenzene, O-Xylene, and PCE were reported only in the parent sample; GRO was only reported in the duplicate sample. RPD cannot be accurately calculated for these compounds, but are estimated in excess of 145% (GRO) based on LRLs in the duplicate sample. However, none of the concentrations noted in the parent (and duplicate for GRO) sample were in exceedance of the screening levels, and concentrations appear to be generally consistent with those reported in August 2013.

5.2 Leak Analysis

Helium was utilized as a leak tracer during the warm and cold season sampling events. According to the DTSC guidelines, a leak of up to 5% is acceptable. Helium leaks were calculated on **Table 2**. A leak of approximately 35% was observed in the sample collected from SS-1 on 1/14/14, however all sub slab samples collected during that event are considered invalid. The maximum leak reported in valid data was 1.4% in SS-1; therefore Antea Group considers the data to be valid.

6.0 DISCUSSION

No gasoline constituents which are affiliated with the site's current open gasoline release case were reported above screening levels in any well or vapor point during the two seasonal sampling events, with the exception of likely false positive detections of benzene in SS-2 and SS-3 during the January 14th, 2014 sampling event. These samples were part of a laboratory batch that was believed to be compromised from outside contaminants, and are not considered to be valid data. Due to the concentrations of gasoline constituents below screening levels reported during this investigation, Antea Group does not consider the site to pose a risk to indoor air quality on-site, to the office buiding at 521 East 5th Avenue, or the residential apartments at 603 East 5th Avenue.

However, PCE concentrations reported in SS-1 located at 521 East 5th Avenue were over 50 times greater than the screening level for sub-slab vapor concentrations in a commercial building. Additionally, PCE concentrations in SS-2, also located in the office building, were above the ESL, but within the same order of magnitude. These concentrations appear to be consistent between the two valid sampling events in August 2013 and February 2014; hence Antea Group believes that there is a potential threat to indoor air quality due to PCE vapor in the office building at 521 East 5th Avenue. PCE concentrations in vapor wells VP-1 and VP-2 did not exhibit the elevated PCE concentration observed in SS-1. VP-1 is located between SS-1 and the station building, and VP-3 is located in front of the station near the mechanics bays. If the station building was the source of PCE in SS-1, it would likely be observed at a higher concentration in VP-1 or VP-3; therefore Antea Group does not believe that the site is the source of PCE vapor at SS-1 or SS-2.

7.0 CONCLUSIONS AND RECOMMENDATIONS

Antea Group installed four sub-slab points and conducted two rounds of vapor sampling during the warm season 2013 and the cold season 2014. Based on the results of the sampling events, Antea Group concludes the following:

- Vapor samples collected on January 14, 2014 from sub-slab vapor points were likely compromised from outside contamination and are not considered valid. The sub-slab points were resampled on January 21 and February 20, 2014.

- No gasoline constituents were reported above screening levels in sub-slab vapor point or vapor well samples, indicating that the site's documented gasoline fuel release does not pose a threat to indoor air quality in 603 or 521 East 5th Avenue.
- No PCE concentrations were reported above the calculated sub-slab screening levels in samples collected within apartments at 603 East 5th Avenue (SS-3 and SS-4) or in the on-site vapor wells (VP-1 and VP-3).
- Concentrations of PCE above the calculated screening level were reported in SS-1 and SS-2 in the commercial office building at 521 East 5th Avenue, indicating that PCE in sub-slab vapor could pose a threat to indoor air quality in the office building.
- Since PCE concentrations in VP-1 and VP-3 were two orders of magnitude below the concentration in SS-1, Antea Group does not believe that the site is the source of PCE vapor in SS-1 or SS-2.

Based on these conclusions, Antea Group recommends the following:

- No further sampling of sub-slab probes or on-site vapor wells for gasoline constituents.
- Removal of the existing sub-slab vapor probes and slab repair in the off-site properties.
- As stated in previous reports, Antea Group believes that PCE contamination in groundwater and vapor beneath the site and vicinity are due to an off-site, upgradient source. The current investigation reinforces this belief. Antea Group will prepare an *Offsite PCE Source Evaluation Report* which will identify potential off-site sources and transport pathways of PCE at and near the site using available data and documents. The report will be submitted during the third quarter 2014. The purpose of the Source Evaluation Report will be to further support Antea Group's recommendation that the GPP open a separate case for PCE in groundwater and soil vapor and that further evaluation of a potential threat to indoor air quality be conducted by the appropriate responsible party.

8.0 REMARKS

The recommendations contained in this document represent Antea USA, Inc.'s professional opinions based upon the currently available information and are arrived at in accordance with currently accepted professional standards. This document is based upon a specific scope of work requested by the client. For any reports cited that were not generated by Delta or Antea Group, the data from those reports is used "as is" and is assumed to be accurate. Antea Group does not guarantee the accuracy of this data for the referenced work performed nor the inferences or conclusions stated in these reports. The contract between Antea USA, Inc. and its client outlines the scope of work, and only those tasks specifically authorized by that contract or outlined in this document were/will be performed. This document is intended only for the use of Antea USA, Inc.'s client and anyone else specifically identified in writing by Antea USA, Inc. as a user of this document. Antea USA, Inc. will not and cannot be liable for unauthorized reliance by any other third party. Other than as contained in this paragraph, Antea USA, Inc. makes no express or implied warranty as to the contents of this document.

SUBJECT: UNOCAL 76 STATION #6390 AT 402 SOUTH DELAWARE STREET, SAN MATEO, CALIFORNIA

Dear Mr. Hunter:

Antea Group uploaded the following documents to the State GeoTracker database: 1) assessment report dated July 6, 2012; 2) groundwater and subsurface vapor assessment workplan dated September 7, 2012; and 3) groundwater monitoring report dated November 15, 2012. The following comments are based on San Mateo County Groundwater Protection Program (GPP) staff review of these documents and the project file.

Assessment Report

Section 3.5 of the report and the well construction details indicate #3 sand was used for the filter pack of monitoring wells MW-10R, MW-18, and MW-19. A #3 filter pack certainly does not appear appropriate for MW-10R given the texture of the logged soil. Page 4 of our letter dated November 22, 2011 required filter pack size to be based on the texture of the formation opposite the screened interval. Therefore, we may require replacement of these wells if future problems with siltation or remedial effectiveness should occur.

Section 4.1 of the report states no groundwater is present <21 feet below grade (fbg) within the western portion of the site, which is why only deeper groundwater samples were collected from Borings TW-1 and SB-8. However, the depth to groundwater reported in TW-1 and SB-8 and within site wells suggests groundwater is present at approximately 15 fbg (smearing or compaction of fines from the drilling process may have inhibited groundwater from accumulating in the borehole). Installing a shallow monitoring well near at least Boring SB-8 will resolve this problematic issue (discussed in the workplan portion of this letter) and satisfy the assessment of first groundwater in this area that was required in our November 2011 letter.

Section 5.o of the report does not demonstrate Pace lab qualifiers E and S5 do not affect the use of the data. Please upload to GeoTracker by **March 29, 2013**, a letter from the laboratory demonstrating these qualifiers do not affect the use of the qualified results (concluding they don't without justification is not sufficient).

GPP staff do not consider it reasonable for the isoconcentration lines on Figures 5 and 6 to close west, northeast, and southeast of the fuel UST cavity. Results obtained from the deeper screened monitoring wells should not be used to determine where to close these lines because the investigation demonstrated the greatest fuel hydrocarbon concentrations occur in groundwater <21 fbg and no groundwater sampling data from <21 fbg has been collected west and northeast of the fuel UST cavity and south of MW-10R.

Table 2 does not define the abbreviations used for the halogenated organic compounds listed in the column headings, nor does it define the asterisk footnote. Please ensure this is addressed in future versions of this table. It appears the asterisk footnote denotes samples where the reported volatile organic compound concentrations may not be representative of in-situ conditions because an air-knife was used to clear the borehole prior to sampling.

The site history data in Appendix C is not complete and contains some incorrect data. Please incorporate the following comments into future discussions of site history: 1) two holes were observed in the waste oil UST after its removal; 2) Pacific Environmental Group only identified one well within 0.25 mile of site in June 1996 (a cathodic protection well); and 3) Delta is not awaiting GPP staff approval to implement the October 2010 workplan.

The report concludes the tetrachloroethene (PCE) in deeper groundwater (chiefly >21 fbg) did not originate from site activities because soils beneath the former waste oil tank did not contain PCE and relatively low levels of PCE were reported in groundwater sample SB-8. GPP staff consider this conclusion flawed because PCE was in fact reported in a sample of unsaturated zone soil beneath the waste oil UST (Sample WO1; refer to the laboratory report in the report dated November 24, 1992 – incorrectly reported on Table 2 of assessment report). Furthermore, the grab groundwater sample from SB-8 does not explain why the greatest PCE concentrations in groundwater occur in the deeper screened wells downgradient of Unocal's former waste oil tank cavity (MW-7, MW-12B, MW-13B, and MW-15B). Therefore, at this time, it appears activities at the subject site have contributed to the neighborhood PCE plume in concentrations exceeding water quality objectives.

Workplan

The workplan proposes to install two shallow groundwater monitoring wells and two depth discrete subsurface vapor sampling wells. GPP staff approve the proposed installation of the groundwater monitoring wells with the following conditions:

- Install an additional monitoring well screened from 6 to 21 fbg adjacent to the north side of Boring SB-8 to complete the shallow groundwater assessment near the former waste oil UST (an uncompleted objective of the previous assessment). This well will also provide data to assess the lateral extent of dissolved-phase hydrocarbons west of the fuel UST cavity;

- Consider installing a well screened from 21 to 31 fbg near Boring SB-1 to potentially clarify the contribution of PCE from the subject site (T. Endo Automotive Well MW-2 may not be useful for this purpose because the top of the screened interval is 15 fbg [potential dilution compared to data from wells screened >21 fbg]);

- Base the size of the well filter pack on the texture of the formation opposite the screened interval;

- Attempt to coordinate the sampling of these new wells with the First Quarter 2013 groundwater monitoring event; and

- Upload to the State GeoTracker database by **July 18, 2013**, all electronic files required by California Code of Regulations Title 23, Division 3, Chapter 30, including a report detailing and justifying the methods, findings, conclusions, and recommendations of the investigation.

GPP staff concur subsurface vapor sampling is appropriate, but not from the vapor sampling wells proposed in the workplan. The vapor sampling wells are proposed in landscaped planters adjacent to building foundations and paved areas. Hence, the samples obtained from these wells may underestimate the potential vapor intrusion impact to building occupants because of the physics of subsurface vapor flow near buildings. Therefore, GPP staff approve the subsurface vapor sampling portion of the workplan with the following conditions:

- Install two sub-slab vapor sampling probes in the buildings at 521 and 603 East 5th Avenue instead of the proposed subsurface vapor wells;

- Place the shroud over the sub-slab probe prior to purging (the shroud does not need to surround the Summa canisters if the equipment vacuum test demonstrates the vapor purging and sampling apparatus is tight);

- Record shroud helium concentrations every 30 to 60 seconds (not every 2 to 5 minutes as proposed in the workplan) because the proposed flow rate will fill the proposed 1 liter sampling canister within approximately 6 minutes;

- Collect cold and warm season vapor samples from the sub-slab vapor probes and from existing VP-1 and VP-3 (no Regional Water Quality Control Board soil screening level exists for potential vapor intrusion of PCE);

- Additionally analyze the vapor samples for PCE and naphthalene; and

- Upload to the State GeoTracker database by **May 30, 2014**, all electronic files required by California Code of Regulations Title 23, Division 3, Chapter 30, including a report detailing and justifying the methods, findings, conclusions, and recommendations of the

investigation (assumes offsite access will not be obtained in time to perform cold season vapor sampling before March 2013).

Monitoring Report

The report states the groundwater sample collected from MW-11 may represent groundwater trapped in the well bottom cap from when groundwater elevation exceeded the elevation of the bottom cap. GPP staff consider this conclusion reasonable. Please ensure future versions of Table 3 include a footnote to denote this condition.

The GeoWell files uploaded for the site have not been listing the measured total well depth. Please ensure future GeoWell files list this depth. Please also ensure future hydrocarbon isoconcentration maps are justified as discussed in the assessment report portion of this letter.

The field sampling sheets in Appendix C indicate the depth to the top of the pump intake in the "B" suffixed wells is at the top of the screened interval. This does not appear appropriate, especially when a shallow well is nearby. It appears the depth of the sampling pump intake in the deeper screened wells should approximate 24 fbg. Please also ensure future time series graphs (Appendix F) reference the groundwater elevation to the appropriate datum.

The report recommends discontinuing analysis for PCE. GPP staff do not concur with this conclusion based on the comments in the assessment report portion of this letter. Please continue to additionally analyze the groundwater samples for PCE.

The report recommends discontinuing the calculation of vertical hydraulic gradient. GPP staff do not approve this recommendation. Calculation of vertical hydraulic gradient is customary when shallow/deep well pairs are available (e.g. MW-6/MW-13B and MW-4/MW-19) because contamination does not always remain at the top of the saturated zone. The calculation involves minimal effort because well gauging and construction data are available from other tasks.

Please contact me at (650) 372-6292 or at dmilano@smcgov.org if you have any questions.

Sincerely,

Appendix B

Site Details and Summary of Previous Environmental Investigations

SITE LOCATION AND BACKGROUND

The site is currently an active "76"-branded service station. The station is located approximately one mile west of San Francisco Bay in San Mateo, California, at an elevation of approximately 20 feet above mean sea level. The site facilities include two fuel underground storage tanks (USTs) located in a common pit in the southeast portion of the property, three product dispenser islands, and a station building. The USTs were installed at the site in August 1992 during station upgrade activities. A 550-gallon waste oil UST formerly located behind the station building was removed from the site in 1992.

The site is bounded to the northeast by South Delaware Street and a Jiffy Lube facility (407 South Delaware Street), to the northwest by East Fourth Street and commercial buildings, to the southwest by a parking lot for a Taco Bell restaurant (500 East 4th Avenue), and to the to the southeast by a Legal Aide of San Mateo building (521 South Delaware Street) and parking area.

There are seven existing or former gasoline service stations within ¼-mile of the site area. The site is located in a mixed commercial and residential area. The nearest residences are southwest of the site at 411 South Claremont, or approximately 50 feet southwest of the site and an apartment building is located at 603 East 5th Avenue approximately 75 feet northeast of the site.

SUMMARY OF PREVIOUS ENVIRONMENTAL INVESTIGATIONS

In August 1992, Kaprealian Engineering, Inc. (KEI) observed the removal of two 12,000-gallon, fiberglass gasoline underground storage tanks (USTs), one 550-gallon waste oil UST, and the associated product piping and dispensers. Upon removal of the tanks, a 9-inch crack was observed along the eastern end of the super unleaded gasoline UST, and two 3/16-inch diameter holes were observed in the waste oil tank. A monitoring well had apparently been installed too close to the super unleaded UST, causing the crack. Petroleum hydrocarbon contamination was observed at the eastern end of the gasoline UST cavity. The cavity was over-excavated to remove as much of the impacted soil as possible, resulting in a final excavation that measured approximately 30' by 27' by 22' deep. Initially, six soil samples (A1, A2, B1, B2, SW1, and SW2) were collected from the bottom and sidewalls of the UST cavity, one soil sample (WO1) was collected from the bottom of the waste oil UST cavity, and six soil samples (P1, P2, P3, P4, P5, and P6) were collected from the bottom of the product piping trenches.

At a later date, KEI collected an additional three soil samples (SW1, SW2, and SW3) from the gasoline UST cavity, along with a grab groundwater sample (W1). The water sample was collected after a total of approximately 5,800 gallons of water had been pumped form the gasoline UST cavity. The groundwater had floating product and a heavy sheen. Additionally, KEI collected three soil samples (D1, D2, and D3) from beneath the gasoline dispensers. Laboratory analyses of soil samples collected from the gasoline UST cavity reported relatively high levels of total petroleum hydrocarbons as gasoline (TPHg) benzene, toluene, ethylbenzene, and total xylenes (BTEX compounds), and total petroleum hydrocarbons as diesel (TPHd). The requested petroleum hydrocarbon constituents were not reported above laboratory detection limits in the soil samples collected from the product piping trenches and from beneath the gasoline dispensers. Laboratory analysis of the soil sample from the waste oil UST indicated the

presence of the heavy metals cadmium, chromium, nickel, lead and zinc, while the remaining petroleum hydrocarbon constituents were not indicated at concentrations above the laboratory detection limits. High levels of TPHd, TPHg, and BTEX compounds were also reported in the groundwater sample.

In May 1994, KEI installed three monitoring wells (MW-1, MW-2 and MW-3) at the site. Laboratory analyses of the soil samples collected from the borings for monitoring wells MW-2 and MW-3 indicated the presence of TPHg and BTEX compounds. The requested petroleum hydrocarbon constituents were not reported above laboratory detection limits in the soil samples collected form the MW-1 borehole. The wells were initially gauged and sampled in June 1994. Laboratory analyses of the water samples collected from MW-2 and MW-3 reported the presence of petroleum hydrocarbons in MW-2 and MW-3. The depth to water ranged from 15.33 to 16.71 feet below ground surface (bgs) with a groundwater gradient reported at 0.004 foot/foot to the east. KEI concluded to follow a three-month (quarterly) monitoring program.

In March 1995, two additional monitoring wells (MW-4 and MW-5) were installed at downgradient, off-site locations in the sidewalk along the opposite side of South Delaware Street from the site. Laboratory analyses of the soil samples collected from the monitoring well boreholes indicated the presence of TPHg and BTEX contamination in MW-4. The new wells were added to the quarterly groundwater monitoring program and were first sampled in April 1995. Laboratory analyses of the water samples collected from MW-4 and MW-5 indicated the presence of maximum concentrations of 150,000 micrograms per liter (µg/L) TPHg, 12,000 µg/L benzene, 40,000 µg/L toluene, 4,700 µg/L ethylbenzene, and 31,000 µg/L total xylenes reported in MW-4.

In January 1996, GeoStrategies (GSI) observed the excavation and removal of a 150 gallon capacity oil/water separator. A confirmation soil sample (OWS-S-4.5) was collected from underneath the oil/water separator at a depth of 4.5 feet bgs. Laboratory analysis of the sample indicated the presence of trace concentrations of TPHd, toluene, and total xylenes. Additionally, the presence of the heavy metals chromium, nickel, lead, and zinc were indicated at concentrations of 160 milligrams per kilogram (mg/kg), 99 mg/kg, 13 mg/kg, and 69 mg/kg, respectively. Tetrachloroethylene (PCE) and other chlorinated solvents were not present in the soil sample.

In February 1996, KEI supervised the advancement of three Geoprobe® soil borings (SP1, SP2, and SP4) at off-site locations. The soil borings were terminated at a depth of 13 feet bgs, with groundwater encountered at approximately 10.5 feet bgs. Grab groundwater samples were collected from each borehole. Laboratory analyses of the water samples reported low to moderate levels of TPHg, benzene, ethylbenzene, and total xylenes in the sample from boring SP-4. Petroleum hydrocarbon constituents were not reported above laboratory detection limits in the groundwater samples from borings SP-1 and SP-2.

In June 1996, Pacific Environmental Group, Inc. (Pacific) performed a well survey and reviewed California Department of Water Resources (DWR) well records. One documented well was identified within a ¼-mile radius of the site.

In December 2006 and January 2007, SECOR supervised the following activities: advancement of four direct push soil borings (SP-5 through SP-8), the installation of three soil vapor wells (VP-1 through VP-3) and four additional groundwater monitoring wells (MW-6 through MW-9), and the destruction of four groundwater monitoring wells

(MW-1, MW-2, MW-3, and MW-5). Laboratory analyses of soil samples collected indicated the presence of up to 1,300 mg/kg total purgeable petroleum hydrocarbons (TPPH, MW-6@16.5-17), 0.18 mg/kg benzene (MW-6@11-11.5), 32 mg/kg toluene (MW-6@11-11.5), 20 mg/kg ethylbenzene (MW-6@11-11.5), 110 mg/kg total xylenes (MW-6@11-11.5), and 0.089 mg/kg methyl tertiary butyl ether (MTBE, MW-6@19.5-20). Grab groundwater sample analytical results indicated the presence of up to 51,000 µg/L TPPH (SP-8), 1,300 µg/L benzene (SP-5), 1,500 µg/L toluene (SP-5), 3,000 µg/L ethylbenzene (SP-8), 9,600 µg/L total xylenes (SP-8), and 330 µg/L MTBE (SP-5). Groundwater samples from MW-6 and MW-9 reported petroleum hydrocarbons. Laboratory analyses of the soil vapor samples indicated the presence of up to 0.75 micrograms per liter (µg/L) TPPH (VP-3), up to 16 µg/L toluene (VP-1), 14 µg/L ethylbenzene (VP-3), 42 µg/L m,p-xylenes (VP-3), and 29 µg/L o-xylenes (VP-3).

Based on the results of this investigation, SECOR concluded that hydrocarbons in soil had been adequately delineated, the lateral extent of hydrocarbons in groundwater had been delineated up-gradient and cross-gradient, the lateral extent of hydrocarbons in deeper groundwater had been delineated to the southwest (cross-gradient) by SP-7, and that vapor inhalation did not appear to be an exposure pathway at the site. SECOR recommended installation of a downgradient well in the shallow water bearing zone and downgradient wells in the deeper water bearing zone along East Fifth Avenue and Delaware Street, and to the northwest and northeast (up and cross-gradient) of the site. SECOR recommended groundwater analyses and historical research to identify the possible source of tetrachloroethylene (PCE) in groundwater.

In August 2008, Stantec oversaw the installation of two shallow groundwater monitoring wells (MW-10 and MW-11), and four deeper zone wells (MW-12B, MW-13B, MW-14B, and MW-15B) at locations down-gradient of the subject site. This included the collection of both soil and groundwater samples from the new wells. Stantec also completed a sensitive receptor survey (SRS) as part of this investigation (see below). Stantec concluded that petroleum hydrocarbon plumes in groundwater had been delineated by the new wells, but recommended continued semiannual groundwater monitoring. No additional evaluation of sensitive receptors was recommended based on findings of the SRS (where no sensitive receptors were identified in the immediate down-gradient direction of the site).

Between 2009 and 2010, Delta Consultants prepared an investigation work plan to assess the PCE contamination in groundwater in the vicinity of the site. The San Mateo GPP did not accept the *Potential Source Evaluation and Tetrachloroethene (PCE) Source Evaluation Revised Work Plan on October 29, 2010.* Delta Consultants revised and resubmitted the work plan to the GPP.

In February 2011, Antea Group (formerly Delta Consultants) received conditional approval from the lead oversight agency, San Mateo County GPP, of their October 29, 2010 submittal titled *Potential Source Evaluation and Tetrachloroethene (PCE) Source Evaluation Revised Work Plan.*

Between May and June 2011, Antea Group oversaw the installation of one additional groundwater monitoring well MW-17B, and the advancement of six soil borings SB-1 and SB-3 through SB-7 to assess the potential up-gradient presence of PCE in soil and groundwater, as well as to further quantify the degree and extent of

on-site and downgradient hydrocarbon contamination associated with the subject site. Details of the investigation are presented in the July 2011 *Potential Tetrachloroethylene (PCE) Source Investigation Report*.

In April and May 2012, Antea Group completed additional delineation of gasoline contaminants in groundwater to the east and southeast of the USTs, as well as the determining whether or not the subject site is a likely contributor to the PCE contaminant plume present in the regional groundwater. Antea Group oversaw the installation of soil borings SB-8 and SB-9, temporary well TW-1, and monitoring wells MW-18 and MW-19. Also, Antea Group oversaw the destruction of shallow well MW-10, replaced with new well MW-10R at a deeper screened interval. Antea Group submitted the *Additional Site Investigation Report* summarizing the April and May field activities to the GPP on **July 6, 2012**.

On **September 7, 2012**, Antea Group submitted an *Additional Groundwater and Vapor Investigation Work Plan* to the GPP. In this Work Plan, Antea Group proposed installing two additional monitoring wells downgradient of wells MW-10R and MW-18, as well as two nested vapor wells adjacent to the neighboring, off-site buildings.

In March 2013, Antea Group installed monitoring wells MW-20 and MW-21 *Plan*, to further define the shallow groundwater contaminant plume, in general accordance with the *Additional Groundwater and Vapor Investigation Work Plan* dated September 7, 2012. In addition, soil boring SB-11 was advanced and monitoring well MW-11 was destroyed per GPP request.

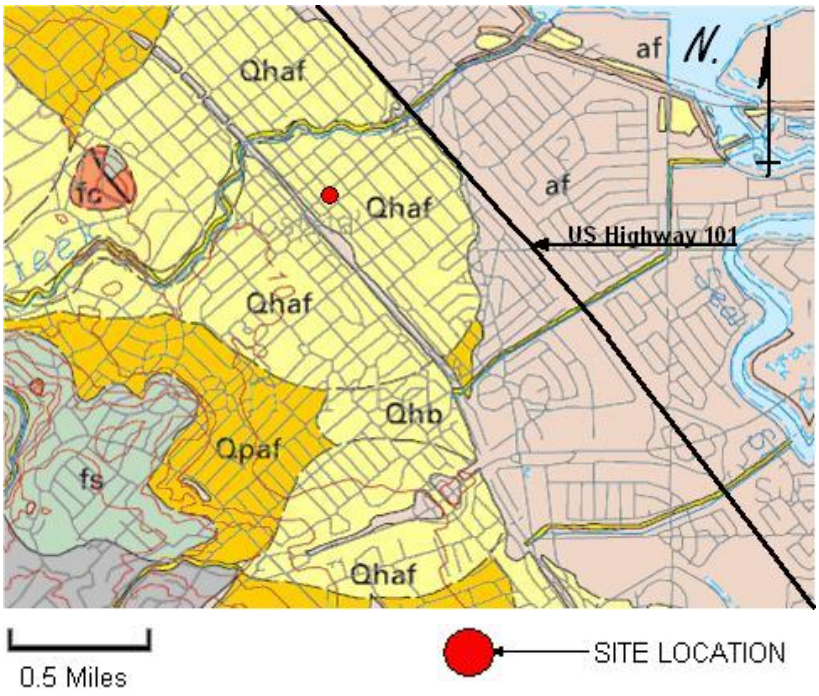
In June and July 2013, Antea Group installed monitoring wells MW-22 through MW-24 to assess the contribution of PCE from the former waste oil UST (MW-22), to assess PCE concentrations upgradient of the site (MW-23), and to further define the extent of the shallow groundwater contaminant plume (MW-24). Antea Group also advanced soil boring SB-10 to assess onsite shallow soil conditions near the tank pit. Antea Group submitted the *Additional Soil and Groundwater Investigation Report* summarizing field activities to the GPP on **July 17, 2013**.

In August 2013, Antea Group installed and sampled sub-slab soil vapor probes SS-1 through SS-4 off-site to assess soil vapor conditions within the hydrocarbon contaminant plume beneath the residential and commercial properties adjacent to and downgradient of the site. Vapor samples were collected in August 2013 and January/February 2014.

Sensitive Receptors

In 1996, a well survey was performed by Pacific. Four wells (three cathodic protection wells and one irrigation well) were identified within ¼-mile of the site. The City of San Mateo confirmed that there are two irrigation wells in Central Park (approximately 2,544 feet south of the site) and one irrigation well at King Center (approximately 3,648 north-northwest of the site).

Stantec performed a sensitive receptor survey within a ½-mile radius of the site during July 2008. A detailed parcel survey was performed at a 500-foot radius around the site. Research of the DWR well completion record database identified one irrigation well located approximately 2,208 feet north-northeast of the Site at 1015 2nd Avenue, San Mateo. The well was installed in 1953 to a depth of 46 feet bgs with a screened interval of 30 to 46 feet bgs. There



was one surface water body (San Mateo Creek) identified within the limits of the ½-mile survey, approximately 1,488 feet north of the site.

SITE SETTING

Regional Geologic Setting

The site is located on an alluvial plain extending from the Santa Cruz Mountains to the east to the San Francisco Bay. The geologic map of the vicinity below shows that the site is underlain by alluvial fan and fluvial deposits (Qhaf). Near the edge of San Francisco Bay, the deposits consist of medium dense sands that fine upward to sandy or silty clay (E.E. Brabb, et al., 1998). Other deposits in the area are heterogeneous artificial fill (af) and basin

Geologic Map of Vicinity

GEOLOGY OF THE ONSHORE PART OF SAN MATEO COUNTY, CALIFORNIA: DERIVED FROM THE DIGITAL DATABASE OPEN-FILE 98-137

deposits (Qhb) consisting of fine silty clay to clay deposits.

Regional Hydrogeologic Setting

The site is located within the Santa Clara Valley groundwater basin and South Bay hydrologic planning area. Groundwater throughout the area flows typically northeasterly, originating in the Santa Cruz Mountains to the west and flowing towards San Francisco Bay. The basin is composed of alluvial fan deposits formed by tributaries to San Francisco Bay. The water-bearing formations comprise two groups; the Santa Clara Formation of the older

Plio-Pleistocene age and the Quaternary age alluvial deposits. The shallow alluvial deposits overlie the Santa Clara Formation and have a maximum depth of about 1,250-feet.

Quaternary age alluvium consists of sand, gravel, silt, and clay deposits that are about 100-feet thick and average about 60-feet thick. The Pliocene age San Mateo Formation consists of deposits of marine sand, gravel, silt, and clay, which are locally water-bearing (DWR 2003).

The prominent groundwater flow direction is to the east.

Pacific Environmental Group, Inc. (Pacific) conducted a well survey and reviewed California Department of Water Resources (DWR) well records in June 1996. PEG only identified one documented cathodic protection well within a ¼-mile radius of the site.

Stantec conducted a sensitive receptor survey within a ½-mile of the site between July 2008 and August 2008 (Stantec 2008). A detailed parcel survey was performed at a 500-foot radius surrounding the site. The parcel survey identified 12 properties with basements, two properties with a sump, and no properties with groundwater wells within the 500-foot radius. A field canvas by Stantec did not identify groundwater production wells, or accompanying facilities associated with groundwater production wells within the search radius. In addition, California Water Service Company, the primary water provider for the area, indicated that they did not have any water supply wells within ½-mile boundary of the survey area.

There is one surface water body identified within the limits of the ½ -mile survey. San Mateo Creek is located approximately 1,488-feet north of the site.

ACCREDITED IN ACCORDANCE WITH nelac

Calscience Environmental Laboratories, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

7 Chain of Custody/Sample Receipt Form. 29

Calscience Environmental Laboratories, Inc.

Work Order Narrative

Work Order: 13-08-1807 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain of Custody (COC) on 08/27/13. They were assigned to Work Order 13-08-1807.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Additional Comments:

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Glossary of Terms and Qualifiers

Work Order: 13-08-1807 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Antea™Group Laboratory Data Validation Sheet

Project/Client: I40256390/COP ELT

Project #: I40256390

Date of Validation: 03/06/14 **Date of Analysis:** 01/17, 01/18, 02/05/14

Sample Date: 01/14/14 **Completed By:** Nadine Periat

Signature:

Circle or Highlight (Yes / No) (below)

Analytical Lab Used and Report # (if any): Calscience Work Order Number 14-01-0965_s3

1.	Were the analyses the ones requested?	(Yes) / No
2.	Do the sample number(s) on the chain-of-custody (COC) match the one(s) that appear on the laboratory data sheet?	(Yes) / No
3.	Were samples prepared (extracted, filtered, etc.) within EPA holding times?	(Yes) / No
4.	Once prepared/extracted, were the samples analyzed within the EPA holding times?	(Yes) / No
5.	Were Laboratory blanks performed, if so, were they non-detect?	(Yes) / No
6.	Are the units correct? (i.e., soil samples in mg/kg or ug/g, water samples mg/L, ug/L, and air samples in volume mg/m^3,etc.)	(Yes) / No
7.	Were appropriate Matrix Spike (MS) and Matrix Spike Duplicate (MSD) samples included in the laboratory batch sample?	(Yes) / No
8.	Were blank spike (SS or LCS) or blank spike duplicate (SSD or LCSD) samples included in the laboratory batch samples?	(Yes) / No
9.	Were QA/QC samples (MS/MSD, SS/SSD, LCS/LCSD) within the shown acceptable range of % recovery?	(Yes) / No
10.	Were MS/MSD (or SS/SSD) values used to calculate Relative Percent Difference (RPD)?	(Yes) / No
11.	Were Relative Percent Difference values within the acceptable range (i.e. ±25%)?	(Yes) / No
12.	Were surrogate recoveries within the acceptable range (i.e. ±30%)?	(Yes) / No

For a 'no' answer, explain why and what corrective action was taken (use additional sheet(s), as necessary:

* While analytical results appear to be valid based on laboratory QA/QC procedure listed above, the data for sub slab points are considered to be invalid due to discrepancies between the parent and duplicate sample, and overall anomalous data in comparison to the August sampling event. This data was rerun with slightly more favorable results, however these results were generated after indicating to the laboratory which sample the duplicate belonged to. The laboratory agreed that there could have been an issue with the batch that contained the sub-slab Summa cans. The vapor well sample Summa cans were from a different batch and are considered valid.

ACCREDITED IN ACCORDANCE WITH nelac

Calscience Environmental Laboratories, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

7 Chain of Custody/Sample Receipt Form. 25

Calscience Environmental Laboratories, Inc.

Work Order Narrative

Work Order: 14-01-0965 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain of Custody (COC) on 01/17/14. They were assigned to Work Order 14-01-0965.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

New York NELAP air certification does not certify for all reported methods and analytes, reference the accredited items here: http://www.calscience.com/PDF/New_York.pdf

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Glossary of Terms and Qualifiers

Work Order: 14-01-0965 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Subject: RE: Sample Receipt for COP ELT/I40256390 / CEL 14-01-0965

Hi Richard,

Again – very sorry about the COC – I'll convey this to the team and try to get a review of the COCs before they go out in the future.

All samples need the following analyses:

ASTM-D1946: CH4, CO2, O2, Helium
TO-15: BTEX, 8 oxys, Naphthalene, PCE
TO-3: GRO

Also – this doesn't look like it was noted on the COC but – SS-4 may not contain any vacuum. If this is the case, we do not want it analyzed. Can you let me know today what the vacuums are in the vapor samples? We also need the can vacuums noted on the lab report.

Thanks Richard! Let me know if you have any other questions.

Subject: Sample Receipt for COP ELT/I40256390 / CEL 14-01-0965

Hi Nadine,

Please confirm sample analyses; no tests were checked off on the COC.

Thanks.

(Yes) / No (below)

Analytical Lab Used and Report # (if any): Calscience Work Order Number 14-01-0965_s3

1.	Were the analyses the ones requested?	(Yes) / No
2.	Do the sample number(s) on the chain-of-custody (COC) match the one(s) that appear on the laboratory data sheet?	(Yes) / No
3.	Were samples prepared (extracted, filtered, etc.) within EPA holding times?	(Yes) / No
4.	Once prepared/extracted, were the samples analyzed within the EPA holding times?	(Yes) / No
5.	Were Laboratory blanks performed, if so, were they non-detect?	(Yes) / No
6.	Are the units correct? (i.e., soil samples in mg/kg or ug/g, water samples mg/L, ug/L, and air samples in volume mg/m^3,etc.)	(Yes) / No
7.	Were appropriate Matrix Spike (MS) and Matrix Spike Duplicate (MSD) samples included in the laboratory batch sample?	(Yes) / No
8.	Were blank spike (SS or LCS) or blank spike duplicate (SSD or LCSD) samples included in the laboratory batch samples?	(Yes) / No
9.	Were QA/QC samples (MS/MSD, SS/SSD, LCS/LCSD) within the shown acceptable range of % recovery?	(Yes) / No
10.	Were MS/MSD (or SS/SSD) values used to calculate Relative Percent Difference (RPD)?	(Yes) / No
11.	Were Relative Percent Difference values within the acceptable range (i.e. ±25%)?	(Yes) / No
12.	Were surrogate recoveries within the acceptable range (i.e. ±30%)?	(Yes) / No

For a 'no' answer, explain why and what corrective action was taken (use additional sheet(s), as necessary:

ACCREDITED IN ACCORDANCE WITH nelac

Calscience Environmental Laboratories, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Calscience Environmental Laboratories, Inc.

Work Order Narrative

Work Order: 14-01-1225 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain of Custody (COC) on 01/22/14. They were assigned to Work Order 14-01-1225.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

New York NELAP air certification does not certify for all reported methods and analytes, reference the accredited items here: http://www.calscience.com/PDF/New_York.pdf

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Glossary of Terms and Qualifiers

Work Order: 14-01-1225 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Subject: Sample Receipt for COP ELT/I40256390

Hi Nadine,

Received sample SS-4 today, please confirm the collection data - the COC (attached) and sample ID tags both have 1/24/14.

Thanks.

Richard Villafania
Project Manager

After printing this label:
1. Use the 'Print' button on this page to print your label to your laser or inkjet printer.
2. Fold the printed page along the horizontal line.
3. Place label in shipping pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.

Warning: Use only the printed original label for shipping. Using a photocopy of this label for shipping purposes is fraudulent and could result in additional billing charges, along with the cancellation of your FedEx account number.
Use of this system constitutes your agreement to the service conditions in the current FedEx Service Guide, available on fedex.com.FedEx will not be responsible for any claim in excess of $100 per package, whether the result of loss, damage, delay, non-delivery,misdelivery,or misinformation, unless you declare a higher value, pay an additional charge, document your actual loss and file a timely claim.Limitations found in the current FedEx Service Guide apply. Your right to recover from FedEx for any loss, including intrinsic value of the package, loss of sales, income interest, profit, attorney's fees, costs, and other forms of damage whether direct, incidental,consequential, or special is limited to the greater of $100 or the authorized declared value. Recovery cannot exceed actual documented loss.Maximum for items of extraordinary value is $1,000, e.g. jewelry, precious metals, negotiable instruments and other items listed in our ServiceGuide. Written claims must be filed within strict time limits, see current FedEx Service Guide.

Circle or Highlight Yes / No (below)

Analytical Lab Used and Report # (if any): Calscience Work Order Number 14-01-1225

1.	Were the analyses the ones requested?	(Yes) / No
2.	Do the sample number(s) on the chain-of-custody (COC) match the one(s) that appear on the laboratory data sheet?	(Yes) / No
3.	Were samples prepared (extracted, filtered, etc.) within EPA holding times?	(Yes) / No
4.	Once prepared/extracted, were the samples analyzed within the EPA holding times?	(Yes) / No
5.	Were Laboratory blanks performed, if so, were they non-detect?	(Yes) / No
6.	Are the units correct? (i.e., soil samples in mg/kg or ug/g, water samples mg/L, ug/L, and air samples in volume mg/m^3,etc.)	(Yes) / No
7.	Were appropriate Matrix Spike (MS) and Matrix Spike Duplicate (MSD) samples included in the laboratory batch sample?	(Yes) / No
8.	Were blank spike (SS or LCS) or blank spike duplicate (SSD or LCSD) samples included in the laboratory batch samples?	(Yes) / No
9.	Were QA/QC samples (MS/MSD, SS/SSD, LCS/LCSD) within the shown acceptable range of % recovery?	(Yes) / No
10.	Were MS/MSD (or SS/SSD) values used to calculate Relative Percent Difference (RPD)?	(Yes) / No
11.	Were Relative Percent Difference values within the acceptable range (i.e. ±25%)?	(Yes) / No
12.	Were surrogate recoveries within the acceptable range (i.e. ±30%)?	(Yes) / No

For a 'no' answer, explain why and what corrective action was taken (use additional sheet(s), as necessary:

7 Chain of Custody/Sample Receipt Form. 24

Calscience Environmental Laboratories, Inc.

Work Order Narrative

Work Order: 14-02-1521 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain of Custody (COC) on 02/21/14. They were assigned to Work Order 14-02-1521.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

New York NELAP air certification does not certify for all reported methods and analytes, reference the accredited items here: http://www.calscience.com/PDF/New_York.pdf

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Glossary of Terms and Qualifiers

Work Order: 14-02-1521 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Send Label To Printer | Edit Shipment | Finish

LABEL INSTRUCTIONS:

Do not copy or reprint this label for additional shipments - each package must have a unique barcode.

STEP 1 - Use the "Send Label to Printer" button on this page to print the shipping label on a laser or inkjet printer.

STEP 2 - Fold this page in half.

STEP 3 - Securely attach this label to your package, do not cover the barcode.

STEP 4 - Request an on-call pickup for your package, if you do not have scheduled daily pickup service or Drop-off your package at the nearest GSO drop box. Locate nearest GSO dropbox locations using this link.

ADDITIONAL OPTIONS:

Send Label Via Email

TERMS AND CONDITIONS:

By giving us your shipment to deliver, you agree to all the service terms and conditions described in this section.
Our liability for loss or damage to any package is limited to your actual damages or $100 whichever is less, unless you pay for and declare a higher authorized value. If you declare a higher value and pay the additional charge, our liability will be the lesser of your declared value or the actual value of your loss or damage. In any event, we will not be liable for any damage, whether direct, incidental, special or consequential, in excess of the declared value of a shipment whether or not we had knowledge that such damage might be incurred including but not limited to loss of income or profit. We will not be liable for your acts or omissions, including but not limited to improper or insufficient packaging, securing, marking or addressing. Also, we will not be liable if you or the recipient violates any of the terms of our agreement. We will not be liable for loss, damage or delay caused by events we cannot control, including but not limited to acts of God, perils of the air, weather conditions, act of public enemies, war, strikes, or civil commotion. The highest declared value for our GSO Priority Letter or GSO Priority Package is $500. For other shipments the highest declared value is $10,000 unless your package contains items of "extraordinary value", in which case the highest declared value we allow is $500. Items of "extraordinary value" include, but or not limited to, artwork, jewelry, furs, precious metals, tickets, negotiable instruments and other items with intrinsic value.

Analytical Lab Used and Report # (if any): Calscience Work Order Number 14-02-1521

1.	Were the analyses the ones requested?	(Yes) / No
2.	Do the sample number(s) on the chain-of-custody (COC) match the one(s) that appear on the laboratory data sheet?	(Yes) / No
3.	Were samples prepared (extracted, filtered, etc.) within EPA holding times?	(Yes) / No
4.	Once prepared/extracted, were the samples analyzed within the EPA holding times?	(Yes) / No
5.	Were Laboratory blanks performed, if so, were they non-detect?	(Yes) / No
6.	Are the units correct? (i.e., soil samples in mg/kg or ug/g, water samples mg/L, ug/L, and air samples in volume µg/m^3,etc.)	(Yes) / No
7.	Were appropriate Matrix Spike (MS) and Matrix Spike Duplicate (MSD) samples included in the laboratory batch sample?	Yes / (No)
8.	Were blank spike (SS or LCS) or blank spike duplicate (SSD or LCSD) samples included in the laboratory batch samples?	(Yes) / No
9.	Were QA/QC samples (MS/MSD, SS/SSD, LCS/LCSD) within the shown acceptable range of % recovery?	(Yes) / No
10.	Were LCS/LCSD (or SS/SSD) values used to calculate Relative Percent Difference (RPD)?	(Yes) / No
11.	Were Relative Percent Difference values within the acceptable range (i.e. ±25%)?	(Yes) / No
12.	Were surrogate recoveries within the acceptable range (i.e. ±30%)?	(Yes) / No

For a 'no' answer, explain why and what corrective action was taken (use additional sheet(s), as necessary:

Qualifers:
J- Results were evaluated to the MDL (DL), concentrations >= to the MDL (DL) but < RL (LOQ), if found, are qualified with a "J" flag.

Vapor Sampling, Well Installation and First Quarter 2015 Semi-Annual Monitoring Report

76 Service Station No. 6390
402 South Delaware Street, San Mateo, CA
San Mateo County Groundwater Protection Program LOP Case No. 110069

1.0 INTRODUCTION

Antea®Group has prepared this *Vapor Sampling, Well Installation and First Quarter 2015 Semi-Annual Monitoring Report* to document results of the cold weather vapor sampling event at SS-2 and SS-3 on January 14, 2014, the installation of monitoring well MW-25, and the first quarter 2015 semi-annual groundwater monitoring results at the 76 Service Station No. 6390, located at 402 Delaware Street, San Mateo, California (**Figure 1**). The vapor sampling and well installation work was completed in accordance with San Mateo County Groundwater Protection Program (GPP) letter dated October 29, 2014, which is included as **Appendix A**. MW-25 was installed downgradient of MW-21 to define the down gradient extent of the site's dissolved phase contaminant plume.

1.1 Site Location and Setting

The site is currently occupied by an active 76 Service Station, located on the south corner at the intersection of East Fourth Avenue and South Delaware Street in San Mateo, California. The station is located approximately one mile west of San Francisco Bay at an elevation of approximately 20 feet above mean sea level (**Figure 1**). The site facilities currently include two fuel USTs located in a common pit in the southeast portion of the property, three product dispenser islands, and a station building (**Figure 2A**). The site is located on an alluvial plain extending from the Santa Cruz Mountains to the east to the San Francisco Bay within the Santa Clara Valley groundwater basin and South Bay hydrologic planning area. A complete summary of the site location, history, and setting is presented as **Appendix B**. The site soil boring and monitoring well details are summarized in **Table 1** and shown on **Figures 2A** and **2B**.

2.0 VAPOR SAMPLING

2.1 Pre-field Activities

Prior to initiation of field activities, Antea Group contacted the property owners of 521 East 5th Avenue and 603 East 5th Avenue and obtained access to sample the sub-slab vapor points per the pre-existing access agreements.

2.2 Vapor Sampling

Antea Group conducted a cold season sampling event on January 14, 2015 at sub-slab vapor points SS-2 and SS-3 per GPP request (**Appendix A**). Antea Group utilized 6-liter Summa Canisters (Summas) and analysis method TO-15/ TO-15 SIM to meet screening levels based off a 0.05 attenuation factor for sub-slab to indoor air, as recommended by the Department of Substances Control (DTSC). Field Data Sheets are contained as **Appendix C**.

Prior to sampling, Antea Group assembled the sampling train, two 6-liter Summa canisters, one for purging and one for sample collection. The sample train consisted of a short piece of tubing connecting the vapor point to a plug valve, connected to a T-fitting, which enabled the sampling canister and the purge canister to be in-line at the same time. All Summa canisters were equipped with a vacuum gauge connected to the top of a regulator set at a flow rate of approximately 150 milliliters/minute (ml/min).

2.2.1 Shut-in Test

Prior to sample collection, a shut-in pressure test of the sampling train between the Summa canisters and the Swagelok® plug valve was performed for five (5) minutes by opening and closing the purge canister valve. The vapor tight Swagelok plug valve remained closed during the process. The initial vacuum reading on the Summa was noted, and if that vacuum was not maintained for five (5) minutes, the sampling train was fixed until the vacuum was maintained. The pressure test ensures that the sampling manifold is an air-tight system so that only vapors from beneath the slab are being captured.

2.2.2 Helium Shroud Emplacement

After the shut-in test, the plug valve was opened and a helium shroud was placed over the vapor point and plug valve connection. A line to feed helium was placed in the shroud, in addition to a helium detector rod. The base of the shroud was sealed onto the ground surface with hydrated bentonite. Helium was fed into the shroud slowly until a concentration just over of approximately 40% to 60% was achieved. Antea Group monitored the helium detection concentration for five minutes prior to initiation of purging to ensure that the helium atmosphere was relatively stable.

2.2.3 Vapor Purge

After the helium shroud had equilibrated, the sub-slab vapor point was purged at a rate of approximately 150 ml/min by opening the valve of the 6-liter purge Summa canister until 2-liters had been purged, per Environmental Protection Agency (EPA) guidelines[1] which were utilized during all previous sampling events. Antea Group assured that two liters of vapor were purged from each point by monitoring the drop in pressure in the 6-liter purge Summa canister. The starting pressure on a 6-liter Summa is 30 inches mercury (in Hg), so the pressure drop for a 2-liter purge was approximately 10 in Hg.

[1] EPA, Standard Operating Procedure (SOP) for Installation of Sub-Slab Vapor Probes and Sampling Using EPA Method TO-15 to Support Vapor Intrusions Investigations.

2.2.4 Observations During Sample Collection

The following table presents a summary of field data collected during the January 14, 2014 sampling event for SS-2 and SS-3.

Sub-slab Point Name	Summa Canister Volume (Liters)	Total Sample Time (minutes)	Change in Pressure (in Hg)	Sample Rate (ml/min)	Lowest Helium % in Shroud, during sampling
SS-2	6	28	20	142	34%
SS-3	6	32	20	125	36%
DUP-1*	6	24	20	166	34%

* DUP-1 collected simultaneously with SS-2.

Antea Group used flow regulators set to 150 ml/min. All samples were collected within the acceptable range of sampling rates recommended by the DTSC (50 to 200 ml/min). Helium percentages were maintained near 40% during sampling. In-line vacuum gauges between the flow regulator and vapor point/well were also utilized during sample collection to monitor potentially induced vacuum in the vapor points/wells. In-line vacuum gauges remained at zero during collection of all samples.

2.2.5 Sample Analyses

Antea Group submitted the air sample canisters to Eurofins Calscience, Inc., a CA State Environmental Laboratory Accreditation Program (NELAP) certified lab (certification No. 2944) and requested that samples be analyzed for the following (**Appendix D**):

- Gasoline range organics (GRO) by EPA Test Method TO-3M;
- Benzene, toluene, ethylbenzene and xylenes (BTEX compounds), methyl tertiary butyl ether (MTBE), tertiary butyl alcohol (TBA), diisopropyl ether (DIPE), ethyl tertiary butyl ether (ETBE), tertiary amyl methyl ether (TAME) 1,2-dichloroethane (1,2-DCA), ethylene dibromide (EDB), ethanol, and naphthalene by Envirionmental Protection Agency (EPA) Test Method TO-15 or TO-15 SIM;
- Fixed gases: Helium, oxygen/argon, carbon dioxide and methane by American Society for Testing and Materials (ASTM) D-1946 or ASTM D-1946 (M).

2.3 Vapor Analytical Results

A summary of analytical results are provided in **Table 2**, and GRO, and benzene concentrations are shown on **Figure 3**. The Laboratory analytical report is included as **Appendix D**.

No analytes were detected above sub-slab screening levels, which were established by applying the DTSC recommended attenuation factor of 0.05 to the San Francisco Regional Water Quality Control Board's (SFRWQCB) indoor air environmental screening level (ESL) for residential use. This is consistent with historical vapor sample results from these sub-slab points.

The following documents the detections above laboratory reporting limits (LRLs) from this sampling event*:

Contaminant	Detections (Sub-Slab Location) ($\mu g/m^3$)	Sub-Slab Screening Level for Residential Use ($\mu g/m^3$)
GRO	4300 (SS-3)	11,800
Benzene	0.39 (SS-2) 0.420 (SS-3)	1.68
Toluene	0.89 (SS-2) 0.49 (SS-3)	6,200
Ethylbenzene	0.22 (SS-2) 0.15 (SS-3)	19
Total Xylenes	1.11 (SS-2) 0.56 (SS-3)	2,000
MTBE	No Detections, LRL is 0.12	188
EDB	No Detections, LRL is 3.8	0.68
1,2-DCA	No Detections, LRL is 0.13	2.40
Naphthalene	0.22 (SS-2) 0.096 (SS-3)	1.44

$\mu g/m^3$ – Micrograms per cubic meter

*Does not include results from quality control samples; any contaminants of concern not stated had no detections from this sampling event *and* do not have a SFRWQCB ESL for indoor residential air, and therefore a sub-slab screening level for residential use buildings cannot be established. EDB was unable to be analyzed by TO-15 SIM, the LRL exceeded the sub-slab screening level.

2.3.1 Quality Assurance/Quality Control

Laboratory QA/QC Performed:	Yes (validated by Antea Group)
Field Duplicate (Duplicate collected at SS-2)	Relative percent difference (RPD) between parent and duplicate sample (detections only): Benzene (151%), Toluene (300%), Ethylbenzene (68%), Total Xylenes (133%), MTBE (209%), Naphthalene (18%)
Laboratory Data Qualifiers:	No
Vacuum retained upon laboratory receipt?	Yes – ranged from -8.8inHg to -10.5inHg
Are the data valid for their intended purpose?	Yes, the data are valid

While the RPD for some analytes is high, this is largely due to the low detections (below 3.6 $\mu g/m^3$) the contaminants. All detections remain below the ESLs, and largest concentration variances were on the magnitude of 1 to 2 $\mu g/m^3$. With the exception of Toluene and p/m xylenes, analyte detections in the parent and duplicate sample are within the same order of magnitude. Antea Group considers the data to be valid for intended purposes.

2.3.2 Leak Analysis

Helium was utilized as a leak tracer during this sampling event. According to the DTSC guidelines, a leak of up to 5% is acceptable. Helium leaks were calculated on **Table 2**; a leak was reported at 0.1% in both samples; Antea Group considers the data to be valid, as the detected helium leak was less than the permissible leak amount under DTSC guidelines.

3.0 MONITORING WELL INSTALLATION

Antea Group installed monitoring well MW-25 downgradient of MW-21 in front of 514 South Eldorado Street to further define the groundwater contaminant plume. The scope of work was based on the October 2014 GPP letter (**Appendix A**).

The location of MW-25 is depicted on **Figure 2A** and **2B**. Well construction details for MW-25 are included on **Table 1**.

3.1 Pre Field Activities

Prior to initiation of field activities, Antea Group produced a Health and Safety Plan (HASP) in accordance with Title 8, Section 5192 of the California Code of Regulations. Field personnel reviewed the HASP daily. Antea Group obtained all necessary subsurface drilling permits from the GPP (**Appendix A**). Additionally, Antea Group obtained an encroachment permit from the City of San Mateo for working on the 500 block of South Eldorado Street (**Appendix A**). Antea Group pre-marked the site and drilling location, opened Underground Service Alert (USA) ticket number 0008017 and employed a private locator to clear the drilling location for subsurface obstructions and hazards. Borehole clearance activities were carried out as outlined in Antea Group's Standard Operating Procedures presented as **Appendix E,** including air-knifing to five feet below the ground surface (bgs).

3.2 Monitoring Well Installation

Gregg Drilling & Testing, Inc. (Gregg), under the supervision of Antea Group personnel, installed new monitoring well MW-25 on January 16, 2015. A boring was initially advanced for soil characterization purposes using a direct-push rig to a depth of 21 feet bgs. The boring was then overdrilled using eight-inch diameter hollow stem auger flights to a depth of 21 feet bgs for the monitoring well installation. The monitoring well was constructed using 15 feet of 0.020-inch slot PVC screen placed from six to 21 feet bgs. The well annulus was backfilled with a #2/16 sand filter pack from the borehole bottom to five feet bgs, then the submerged well screen was surged using a surge block to stabilize the sand pack. Afterward, a 2-foot bentonite seal was placed from 5 feet bgs to 3 feet bgs, and cement grout seal to the surface. All wells were secured with a locking well cap and traffic rated securable well vault, concreted in place. Well construction details are noted on the boring logs presented as **Appendix F** and in **Table 1**.

3.3 Monitoring Well Development

Gregg, under the supervision of Antea Group personnel, developed new monitoring MW-25 on January 27, 2015 by pumping a minimum 10 well casing volumes from the well, or until groundwater parameters stabilized. In total, approximately 36 gallons of water were purged from MW-25. The well development log is included in **Appendix G**.

3.4 Monitoring Well Survey

Licensed surveyor Mid Coast Engineers surveyed the new monitoring well MW-25 on February 6, 2015. Longitude and latitude were surveyed to North American Datum 83. The top of casing well elevations were surveyed to North American Vertical Datum 88. The survey data have been included as **Appendix H.** As required by the State of California Water Resources Control Board, the survey information was uploaded to GeoTracker.

3.5 Monitoring Well Sampling

On February 26, 2015, new monitoring well MW-25 was gauged and sampled for the first time by subcontractor Blaine Tech Services (Blaine Tech) as part of the first quarter 2015 semi-annual groundwater monitoring event, which is summarized in **Section 4.0**.

3.6 Disposal of Investigation Derived Waste

Antea Group's waste management contractor Belshire Environmental Services, Inc. removed two soil drums and one wastewater drum on March 5, 2015. Non Hazardous Waste Manifests for soil and groundwater generated during the investigation are presented as **Appendix I.**

3.7 Monitoring Well Installation Results

3.7.1 Subsurface Conditions

Soils consisted of primarily of clays with sand and clayey sand to total depth at MW-25. A shallow sandy unit was reported from 5 to approximately 12 feet bgs, and a deeper water bearing coarse grained unit was observed at 18.5 feet bgs. First groundwater was encountered at 15 feet bgs at MW-25. In general, reported subsurface conditions were similar to those previously reported.

3.7.2 Soil Screening Results

PID readings ranged from 0.0 to 0.2 parts per million volume (ppmv) throughout the entire depth of MW-25. PID readings are included on the boring log as **Appendix F**.

4.0 FIRST QUARTER 2015 SEMI-ANNUAL MONITORING

Antea Group completed the first quarter 2015 semi-annual groundwater monitoring and sampling event completed on February 25 and 26, 2015. In addition to newly installed MW-25, all site wells besides MW-18 were gauged and sampled. MW-18 was not gauged or sampled because it was inaccessible.

4.1 Work Performed in the Fourth Quarter 2014 and First Quarter 2015

1. Antea Group prepared and submitted the Semi-*Annual Monitoring Report, Third Quarter 2015*, dated October 8, 2014, to the GPP.
2. Antea Group prepared and submitted a *PCE Source Evaluation Report,* dated October 8, 2014, to the GPP.

3. Antea Group conducted a January cold season sampling event at sub-slab vapor points SS-2 and SS-3 on January 14, 2015.
4. Antea Group installed monitoring well MW-25 downgradient of MW-21 in front of 514 South Eldorado Street to further define the groundwater contaminant plume on January 16, 2015.
5. Blaine Tech conducted the first quarter 2015 semi-annual groundwater monitoring event on February 25 and 26, 2015.

4.2 Work Proposed for the Second Quarter and Third Quarter 2015

1. Antea Group will submit the *Vapor Sampling, Well Installation, and First Quarter 2015 Semi-Annual Monitoring Report* (contained herein) to the GPP.
2. Blaine Tech will conduct a limited second quarter interim sampling event with wells MW-21, MW-10R and MW-25 during the second quarter 2015.
3. Blaine Tech will conduct the third quarter 2015 semi-annual groundwater sampling event during the third quarter 2015.
4. Antea Group will summarize the second and third quarter 2015 activities and sampling events and report the results in a semi-annual monitoring report to be completed third quarter 2015.

4.3 Current Project Status

Current phase of project:	Quarterly and semi-annual groundwater monitoring
Monitoring well gauging schedule^:	Interim (2nd and 4th quarters): MW-10R, MW-21, MW-25 Semi-annually (1st & 3rd quarters): MW-4, MW-6, MW-7, MW-8, MW-9, MW-10R, MW-12B, MW-13B, MW-14B, MW-15B, MW-17B, MW-18, MW-19, MW-20, MW-21, MW-22, MW-23, MW-24, MW-25
Monitoring well sampling schedule^:	Interim (2nd and 4th quarters): MW-10R, MW-21, MW-25 Annually (1st quarter): MW-4, MW-7, MW-8, MW-9, MW-14B, MW-15B, MW-17B. Semi-annually (1st quarter, 3rd quarter): MW-6, MW-10R, MW-12B, MW-13B, MW-18, MW-19, MW-20, MW-21, MW-22, MW-23, MW-24, MW-25.
Local receptors:	Irrigation wells – approximately 600 feet NE of the site and 600 feet NNW of the site (See **Appendix A**)
Current remediation technique	No active remediation being conducted

4.4 Regulatory Correspondence

On October 24, 2014, Antea Group received letter correspondence from the GPP summarizing comments from the *Vapor Assessment Report* dated May 29, 2014, the *PCE Source Evaluation Report* dated October 8, 2014, and the *Semi-Annual Monitoring Report, Third Quarter 2014* dated October 8 2014, as included as **Appendix A**.

4.5 Groundwater Monitoring

For the first quarter 2015 groundwater monitoring event, Blaine Tech gauged and sampled 18 wells per their protocol summarized as **Appendix J**. MW-18 was not gauged or sampled because it was inaccessible due to being parked over by a vehicle associated with the auto repair show at the site throughout the two days of the groundwater monitoring and sampling. Copies of Blaine Tech's field data sheets, and the table below summarizes the recent gauging and sampling events are included as **Appendix K**.

Well gauging and sampling date:	First Quarter: February 25 and 26, 2015
Wells gauged:	First Quarter: MW-4, MW-6, MW-7, MW-8, MW-9, MW-10R, MW-12B, MW-13B, MW-14B, MW-15B, MW-17B, MW-18*, MW-19, MW-20, MW-21, MW-22, MW-23 MW-24, and MW-25.
Wells sampled:	First Quarter: MW-4, MW-6, MW-7, MW-8, MW-9, MW-10R, MW-12B, MW-13B, MW-14B, MW-15B, MW-17B, MW-18*, MW-19, MW-20, MW-21, MW-22, MW-23 MW-24, and MW-25.
Purge method:	Low-flow methods via peristaltic pump
Sample collection method:	Low-flow via dedicated tubing
Groundwater parameters measured (**Appendix C**):	Temperature, pH, Conductivity, Turbidity, Dissolved Oxygen (DO)
Wells with measurable LNAPL:	None

*Monitoring well MW-18 was parked over and could not be sampled.
LNAPL – Light non aqueous phase liquid

4.5.1 Groundwater Flow Gradient and Directional Trends

Using the well gauging data from February 25, 2015 and the surveyed well casing elevations (**Table 1**), Antea Group calculated the groundwater elevation at each monitoring well and plotted a groundwater flow direction and gradient for those wells with shallower screened intervals and for those with deeper screened intervals.

Groundwater elevations indicated primary flow within the zone of the shallower screened wells was to the east-southeast at a gradient of 0.003 feet per foot (ft/ft). Historically, groundwater flow in the zone of the shallower screened wells is in the easterly direction. Groundwater flow in the zone of the deeper screened wells was to the east at a gradient of 0.003 ft/ft. Historically, groundwater flow in this deeper zone is to the east. Groundwater elevation contour maps with rose diagrams for shallow screen interval and deep screen interval wells are depicted respectively on **Figures 4A** and **4B.**

4.5.2 Vertical Gradient Data

Antea Group calculated the vertical gradient for well pair MW-6 (screened interval 13 to 19 feet) and MW-13B (screened interval 21 to 31 feet). The difference in hydraulic head between the two wells on February 25, 2015 was 0.06 feet, resulting in a calculated downward vertical gradient of 0.008 (a negligible value given the accuracy of the well gauging readings to the nearest 0.01).

4.5.3 Groundwater Quality Data

Blaine Tech submitted groundwater samples collected during the first quarter 2015 sampling event under chain of custody protocol to Pace Analytical Services, LLC (Pace), a NELAP certified laboratory (Certification No. 08263CA). The

complete laboratory analytical report is included as **Appendix L**. Antea Group requested the laboratory analyze the groundwater samples for the following contaminants of concern:

- GRO (carbon range C_6-C_{12}), referred to by Pace as Total Petroleum Hydrocarbons as Gasoline (TPH-G) by EPA Test Method 8260B;
- BTEX by EPA Test Method 8260B;
- Fuel oxygenates and lead scavengers: MTBE, TBA, DIPE, ETBE, TAME, ethanol, EDB, and 1,2-DCA by EPA Test Method 8260B, and;
- Naphthalene by EPA Test Method 8260B.

Groundwater analytical results are presented in **Table 3** (current) and **Table 4** (historical).

Ranges of contaminant concentrations reported in the groundwater samples during the August sampling event are summarized in the table below. Only the reported contaminants of concern are shown in the following table.

Constituents (ESL in µg/L)	Number of Reported Concentrations Above LRL of Total Samples Analyzed	Minimum Reported Concentration, in µg/L (Sample ID)	Maximum Reported Concentration, in µg/L (Sample ID)
GRO (100)	12 of 18	63 (MW-4)	26,000 (MW-6)
Benzene (1.0)	6 of 18	0.69 (MW-21)	1,500 (MW-6)
Toluene (40)	2 of 18	2.0 (MW-19)	1,700 (MW-6)
Ethylbenzene (30)	3 of 18	55 (MW-21)	670 (MW-10R)
Total Xylenes (20)	4 of 18	94 (MW-21)	4,800 (MW-6)
MTBE (5.0)	4 of 18	0.79 (MW-19)	110 (MW-6)
Naphthalene (6.2)	8 of 18	0.60 (MW-20)	870 (MW-6)

Legend:

ESL = Regional Water Quality Control Board, San Francisco Bay Region, Environmental Screening Level where groundwater is a potential or current drinking water source

µg/L = Micrograms per liter

4.5.4 Groundwater Contaminant Trends

The approximate extent of the GRO and benzene plumes in the zone of the shallower screened wells for February 2015 is depicted on dissolved phase isoconcentration maps on **Figures 5** and **6**.

The core of the dissolved phase hydrocarbon plume is centered at shallow well MW-6, and trails toward MW-10R, as show on **Figures 5** and **6**. Benzene concentrations appear defined to below the ESL of 1.0 µg/L by MW-22 to the west MW-24 to the south-southeast, and MW-21 to the east. MTBE appears to be limited to the southeast corner of the service station, with concentrations exceeding the ESL of 5 µg/L in wells MW-6 and MW-13B, based on current reported concentrations. No analyte concentrations were detected in newly installed MW-25 downgradient of MW-21.

Time series graphs plotting GRO, benzene, MTBE, PCE, and groundwater elevations over time for wells MW-6, MW-12B, MW-13B, MW-15B, MW-10R, MW-18 and MW-19, MW-21, MW-22, MW-23, and MW-24 are presented as **Appendix M**. Overall, contaminant concentrations appear to be relatively stable over time in the selected wells.
In MW-6, GRO appears to be decreasing, and MTBE is stable to decreasing. Benzene appears to be slightly increasing overall in MW-6. In MW-10R located downgradient of MW-6, GRO, benzene and MTBE concentrations appear to be decreasing which indicates that the onsite hydrocarbon plume is attenuating across Delaware Street.

Antea Group will resume Mann-Kendall trend analyses once trends can be established in the newer groundwater monitoring wells.

4.5.5 Waste Disposal Summary

Blaine Tech samplers generated approximately 11 gallons of waste water during the February 2015 sampling event as a result of well purging/sampling and equipment cleaning. Blaine Tech transported the water to their bulk facility in San Jose, California, and after batching process, they will transport the wastewater to Seaport Environmental in Redwood City, California for disposal. The first quarter 2015 waste manifest was not available at the time of report submittal; it will be included in the next monitoring report. Copies of the second and third quarter 2014 waste manifests, previously unavailable, are included as **Appendix N**.

4.5.6 Quality Assurance / Quality Control (QA/QC)

Antea Group's QA/QC measures included use of a trip blank during both sampling events, collection of a field duplicate during the February 2015 sampling event, and a detailed QA/QC data validation check on the Pace laboratory analytical results for the sampling event. Antea Group's laboratory data validation checklists and the Pace laboratory reports are included as **Appendix L**. A summary of QA/QC information is provided in the tables below.

February 26, 2015 sampling event:	
Trip Blank (TB1_20150228):	No contaminants reported
Field Duplicate (FD1_20150228; parent sample collected at MW-13B):	Relative percent difference between parent and duplicate sample: GRO (10.3%), Benzene (2.9%), MTBE (5.5%).
Laboratory QA/QC Performed:	Yes (validated by Antea Group)
Laboratory Data Qualifiers:	None
Are the data valid for their intended purpose?	Yes, the data are valid

Notes: The Method Reporting Limit for Ethanol has been increased due to the presence of an interfering compound for sample MW-10R_20150228.

All RPD results were in an acceptable error tolerance (i.e., less than 30%). Based on a review of the laboratory's analytical report, including their QA/QC procedures and those implemented by Antea Group, we conclude that the laboratory data obtained during the recent groundwater sampling event are valid and usable for their intended purpose.

5.0 CONCLUSIONS AND RECOMMENDATIONS

Antea Group completed a cold season vapor sampling event at Sub-Slab points SS-2 and SS-3. No detections were above sub-slab screening levels as determined by applying an attenuation factor of 0.05 to the indoor air screening level established by the SFRWQCB for residential use. The available data do not suggest a risk posed by the site's plume to occupants of the buildings where the sub-slab points are located. Antea Group does not propose further vapor sampling, as these locations have been consistently below sub-slab screening levels for residential use. As previously requested by GPP, Antea Group will review terms established in access agreements with legal council to determine whether vapor points SS-1 through SS-4 may be transferred to the responsible party for the regional PCE case, or if these points should be destroyed.

Antea Group completed the installation of MW-25 to further define the groundwater contaminant plume downgradient of the 76 Service Station No. 6390, located at 402 Delaware Street in San Mateo, California. Antea Group completed a work scope in general accordance with the San Mateo County Groundwater Protection Program (GPP) letter dated October 29, 2014.

Groundwater flow patterns during the first quarter 2015 are overall consistent with historical trends, reporting a south-east to eastward flow in the shallow and deeper water-bearing zones. Highest contaminant concentrations continue to be present in shallow screened wells MW-6, MW-10R and MW-21 at and downgradient of the UST complex. The installation of MW-25 appears to have defined the lateral extent of GRO, ethylbenzene, xylenes and naphthalene downgradient of the site since there were no concentrations above laboratory indicated reporting limits at MW-25.

Antea Group recommends preparing a sensitive receptor survey update for the site to identify current water supply wells, water bodies and sensitive populations within 1000 feet of the dissolved phase plume boundary.

Antea Group will continue with the semi-annual groundwater monitoring and sampling schedule with additional quarterly monitoring for wells MW-21 and MW-25 to establish downgradient trends, with the next quarterly event occurring in the second quarter 2015, and the next semi-annual event scheduled for third quarter 2015.

6.0 REMARKS

The findings contained in this report represent Antea Group's professional opinions based upon the currently available information and are arrived at in accordance with currently acceptable professional standards. For any reports cited that were not generated by Antea USA, Inc., the data from those reports are used "as is" and is assumed to be accurate. Antea USA, Inc does not guarantee the accuracy of this data for the referenced work performed nor the inferences or conclusions stated in these reports. This report is based upon a specific scope of work requested by the client. The Contract between Antea Group and its client outlines the scope of work, and only those tasks specifically authorized by that contract or outlined in this report were performed. This report is intended only for the use of Antea Group's Client and anyone else specifically listed on this report. Antea Group will not and cannot be liable for unauthorized reliance by any other third party. Other than as contained in this paragraph, Antea Group makes no express or implied warranty as to the contents of this report.

Notes:

<	Analyte not detected above indicated laboratory reporting limit	1,3-DCB	1,3- Dichlorobenzene	TAME	Tertiary amyl methyl ether	ETBE	Ethyl tertiary butyl ether	He	Helium
µg/m³	Microgram per cubic meter	1,4-DCB	1,4- Dichlorobenzene	TPPH	Total purgeable petroleum hydrocarbons	DIPE	Di-Isopropyl ether		
µg/L	Microgram per cubic liter	1,2- DCA	1,2- Dichloroethane	TBA	Tertiary butyl alcohol	MTBE	Methyl tertiary butyl ether		
*	Field Duplicate Sample	EDB	Ethylene dibromide	EPA	Environmental Protection Agency	PCE	Tetrachloroethene		

VOC analyses: 2007 Samples analyzed by TO-14A, 8/2013 and 1/2014 samples analyzed by TO-15, 2/2014 samples analyzed by TO-15 SIM
SS-1 through SS-4 are subslab vapor points.
Shallow gas screening levels taken from SF Bay RWQCB Table E-2
Sub-slab screening levels based on a 0.05 attenuation factor to indoor air.
Indoor Air Screening Level: Environmental Screening Level for Indoor Air Quality established by the San Francisco Regional Water Quality Control Board, Decemeber 201
Carbon dioxide and methane atmospheric levels taken from http://cdiac.ornl.gov/pns/current_ghg.htm
Oxygen and helium atmospheric levels taken from http://nssdc.gsfc.nasa.gov/planetary/factsheet/earthfact.html
Samples collected from SS-1, SS-2 and SS-3 on 1/14/14 are believed to have been compromised from outside contaminant source, data not used in interpretation.

Notes:

<	Denotes less than the Laboratory Reporting Limit	ESL	Environmental screening level	PCE	Tetrachloroethene	TBA	tert-butyl alcohol	VC	Vinyl Chloride
--	Not applicable / measured	GRO	Gasoline range organics	cis-1,2-DCE	cis-1,2-dichloroethylene	TAME	tert-amyl methyl ether	EDB	1,2-Dibromoethane
µg/L	Micrograms per liter	GWE	Groundwater elevation	trans-1,2-DCE	trans-1,2-dichloroethylene	1,2-DCA	1,2-Dichloroethane	TB	Test Blank
BTEX	Benzene, toluene, ethylbenzene, xylenes	GW	Groundwater	NAPL	Non-Aqueous Phase Liquid	DIPE	1-2-Dibromoethane	FD	Field Duplicate
CRWQCB	California Regional Water Quality Control Board	MTBE	Methyl tertiary butyl ether	TCE	Trichloroethene	ETBE	Ethyl-butyl ether		
TOC	Top of Casing								
BOLD	Indicates a concentration above the Reporting Limit								
BOLD	Indicates a concentration above the ESL								

NS = Well not sampled because well was parked over and inaccessible for two days of gauging and sampling. Auto repair shop contacted car owner on 2/26/15, car owner not able to move vehicle until night of 2/26/15.
1 = TOC elevations have been surveyed to the NAVD 88 datum (refer to Table 1 for date of each well's survey)
2 = Analyzed by EPA Method 8260B.
3 = Analyzed by EPA Method 8270C.
4 = Trip blank sample for QA/QC
5 = Field duplicate sample collected at MW-13B
a = The Method Reporting Limit for Ethanol has been increased due to the presence of an interfering compound for sample MW-10R_20150228

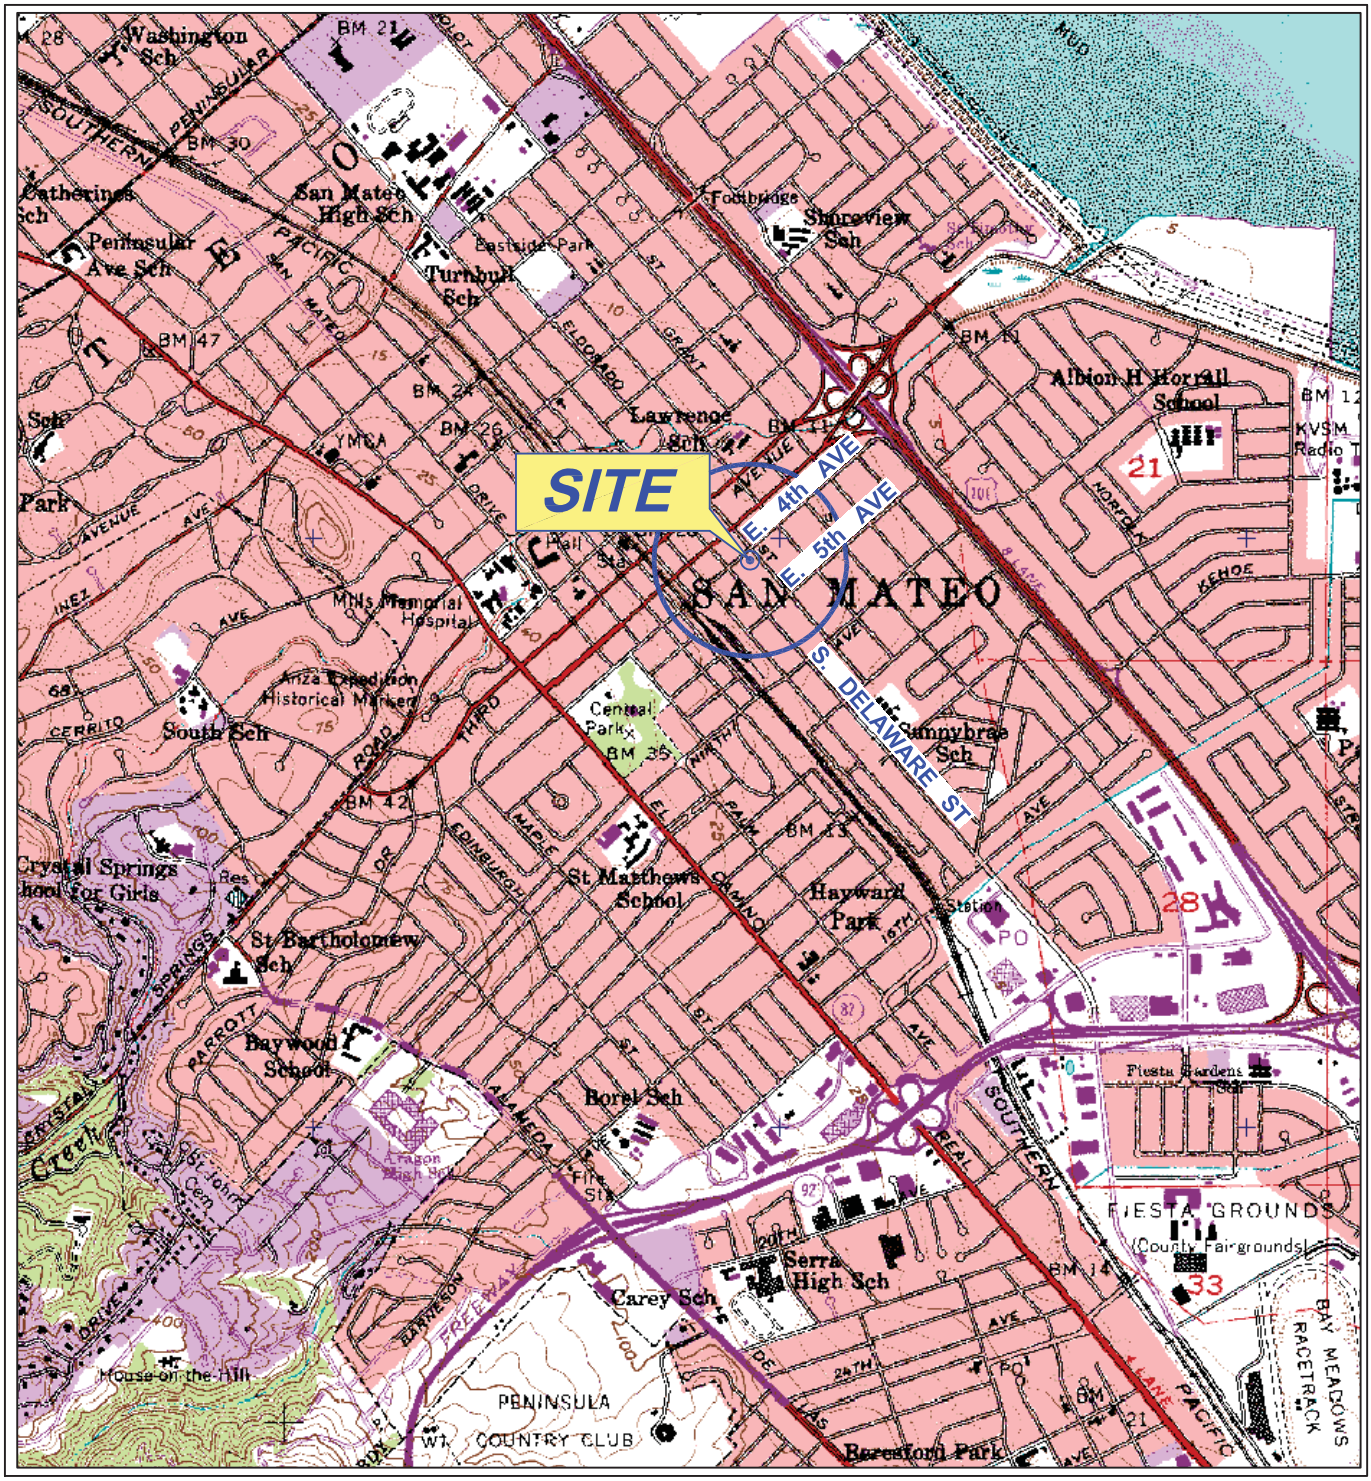
♦ The elevations were surveyed relative to mean sea level, per the City of San Mateo Benchmark #33-2 (elevation = 17.65 feet amsl)
† TOC elevations were surveyed by Morrow Surveying on August 13, 2005 to the NAVD 88 datum by GPS observations.
†† TOC elevations were surveyed by Morrow Surveying on January 16, 2007 to the NAVD 88 datum by GPS observations.
††† TOC elevations were surveyed by Mid Coast Engineers on August 18, 2008 to the NAVD 88 datum by GPS observations.
†††† TOC elevation was surveyed by Mid Coast Engineers on June 6, 2011 to the NAVD 88 datum by GPS observations.
††††† TOC elevation was surveyed by Mid Coast Engineers on May 25, 2012 to the NAVD 88 datum by GPS observations.
†††††† TOC elevation was surveyed by Morrow Surveying on May 16, 2013 to the NAVD 88 datum by GPS observations.
††††††† TOC elevation was surveyed by Morrow Surveying on July 1, 2013 to the NAVD 88 datum by GPS observations.
†††††††† TOC elevation was surveyed by Morrow Surveying on February 6, 2015 to the NAVD 88 datum by GPS observations.



1 Analyzed by EPA Method 5030/8015M between 6/15/94 and 8/10/99, on 8/9/00, on 11/8/00, and between 2/13/02 and 2/18/03; by DHS LUFT between 11/9/99 and 5/18/00; on 2/14/01, and on 8/15/01; by EPA Method 8260B between 8/21/03 and the present.
2 Analyzed by EPA Method 5030/8020 between 6/15/94 and 8/10/99, on 8/9/00, and on 11/8/00; by DHS LUFT between 11/9/99 and 5/18/00, and on 2/14/01; by EPA Method 8021B between 2/13/02 and 2/18/03; by EPA Method 8260B between 8/21/03 and the present.
3 Analyzed by EPA Method 8020M between 3/8/96 and 8/10/99, on 8/9/00, and on 11/8/00; by DHS LUFT between 11/9/99 and 5/18/00, and on 2/14/01; by EPA Method 8021B between 2/13/02 and 2/18/03; by EPA Method 8260B between 8/21/03 and the present.
4 Analyzed by EPA Method 8260B.
5 Analyzed by EPA Method 8270C.

a The presence of MTBE was potentially identified at reportable levels.
b The presence of MTBE was identified at a level equal to or above the taste and odor threshold of 40 µg/L.
c The hydrocarbons detected appeared to be gasoline and a non-gasoline mixture.
d Chromatograph pattern: unidentified hydrocarbons C6-C12
e Chromatograph pattern: weathered gasoline: C6-C12
f Chromatograph pattern: discrete peaks C8-C12
g Chromatograph pattern: discrete peaks
h Sample was additionally run under EPA Method 8260B. MTBE was detected at 1,140 µg/L. All other analytes were non-detect.
i Single analyte peak(s) were present in the requested fuel quantitation range. Fuel hydrocarbon pattern was not present.
j The concentration reported reflect(s) individual or discrete unidentified peaks not matching a typical fuel pattern.
k Reporting limits (PQL or MDL) were raised due to the high level of analyte present in the sample ("D4")
l Detection limit raised due to sample dilution
m Estimated value
n Chromatogram not typical of gasoline.
o The BC laboratory report indicated that reported concentration of 200 µg/L TPPH was due only to the presence of 90 µg/L PCE, 15 µg/L trichloroethane, and 9.8 µg/L cis-1,2-DCA; therefore, SECOR has represented the results for TPPH in this laboratory report as non-detect.
p TPPH was positive due to PCE present in the sample.
q PCE, TCE, and/or 1,2-DCE were subtracted from the gasoline range TPPH, or GRO.
r Sample hold time was exceeded.
s Not enough sample to re-run for PCE.
t First run did not pass, sample had to be diluted due to not enough sample. Only one voa submitted to lab.
u Depth to GW was collected on 9/28/2007 and sample was collected on 8/30/2007
v Sample also analyzed for TPH-diesel (reported at a concentration of 28,000, with the chromatogram reporting a diesel and non-diesel mixture (<C16, >C22)
w Result was positive due to PCE and TCE present in the sample.
x Data from re-sampling event on 3/30/2010.
y "L2" = Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results for this analyte in associated samples may be biased low.
z "M0" = Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory reporting limits.
aa "T4" = Result reported for hydrocarbons within the method-specific range that do not match pattern of laboratory standard.
bb "1n" = The GRO result for this sample did not match the pattern of the laboratory standard for gasoline, likely due to the presence of PCE in the sample
cc Primary compounds not found in typical gasoline
dd "M1" = The matrix spike exceeded the laboratory's QC limits. The batch was accepted based on acceptable recovery from the laboratory control sample.
ee samples also tested for full VOCs, refer to laboratory analytical report for full list of analytes and results.
ff Sample also analyzed for organic lead (result was 'non-detect')
gg Groundwater sample collected may represent casing water trapped in the well bottom.
S5 Surrogate recovery was outside control limits due to matrix interferences (not confirmed by re-analysis).
hh The method reporting limit for ethanol has been increased due to the presence of an interfering compound.
ii Repeat analysis of GRO yielded inconsistent results. The concentrations appear to vary between the bottles. The highest valid result is reported.
jj Repeat analysis for TBA yielded inconsistent results. The concentrations appear to vary between the bottles. The highest valid result is reported.
kk original GRO testing indicated that the primary compounds were not found in typical gasoline. These values were recalculated under the 'Gasoline Hydrocarbon' parameter, calculated by adding up the chromatographic peaks between hexane and dodecan (C6 to C12), subtracting the non-gasoline compounds (primarily dichloroethene, Trichloroethene, and tetrachloroethene), and comparing against a gasoline calibration curve.

Analytical data prepared by Sequoia Analytical between 6/15/94 and 2/18/04; by Severn Trent Laboratories between 8/21/03 and 3/01/06; by BC Laboratories between 8/02/06 and 7/30/09, and by Pace Analytical / Kiff Analytical between 1/18/10 and the present.

San Ramon, CA 94583-5186

SUBJECT: UNOCAL 76 STATION #6390 AT 402 SOUTH DELAWARE STREET, SAN MATEO, CALIFORNIA

Dear Mr. Hunter:

Antea Group has uploaded the following documents to the State GeoTracker (GeoTracker) database: 1) subsurface vapor sampling report dated May 29, 2014; 2) tetrachloroethene (PCE) source evaluation report dated October 8, 2014; and 3) groundwater monitoring report dated October 8, 2014. Thank you for the attention to project management demonstrated by these reports. The following comments are based on San Mateo County Groundwater Protection Program (GPP) staff review of these reports and the project file.

PCE Source Evaluation Report

Section 1.1 states the fuel release at the subject site was caused by activities related to a well being drilled next to one of the USTs. This was not stated in November 1992 UST removal report which simply states a 9-inch-long crack was observed in the super unleaded fuel UST after it was removed (no mention of drilling causing the rupture or the release). Moreover, our permit records indicate the oldest drilling permit issued for the subject site was for MW-1 in May 1994. Please verify your information if it will be used in future documents.

Section 2.2.3 proposes to re-designate MW-20 as a deep well based on the PCE concentrations in the groundwater samples from this well and reportedly, the deeper groundwater occurrence in this well. GPP staff do not support this proposal. Any decision to re-classify MW-20 as a deep well should be solely based on the portion of the saturated zone monitored. The groundwater elevations in MW-15B and MW-20 are very similar on the three dates in which both wells were gauged (2.20 versus 1.31 on July 8, 2013; 0.79 versus 0.80 on January 28, 2014; and 0.37 versus 0.41 on August 4, 2014). In addition, PCE has been reported in saturated zone soil <20 feet below grade (Borings SB-4, SB-6, SB-7).

Simple inspection of the sub-slab vapor sampling results suggest some of the PCE contamination may have originated from the property at 521 E. 5th Avenue. However, the reported uses of this property are not associated with PCE use and the PCE concentrations in the groundwater samples

from recent upgradient well MW-23 are similar to those collected from the most impacted wells near the subject site (MW-7, MW-12B, MW-13B, and MW-15B). Moreover, Figure 3 indicates any sanitary sewer discharge from Wardrobe Cleaners at 335 East Fourth Avenue and possibly the former Family Cleaners facility at 412 East Third Avenue would flow past sample localities SS-1 and SP-7, MW-20, MW-12B, and MW-15B (most of the field points containing elevated PCE concentrations). Furthermore, our Certified Unified Program Agency (CUPA) inspection records indicate PCE was used at Wardrobe Cleaners (no CUPA records exist for Family Cleaners) and Appendix E in the report indicates Wardrobe Cleaners has operated since at least 1954. Hence, at this time, it appears more likely the PCE contamination originated from Wardrobe Cleaners. Therefore, at this time, GPP staff will not require the responsible party for the fuel release at the subject site to perform additional investigation of the PCE release. In addition, we will inform the DTSC that Wardrobe Cleaners does not appear to have provided correct information to the DTSC and we will request Wardrobe Cleaners to voluntarily assess the extent and impact of the PCE.

Subsurface Vapor Sampling Report

Section 3.0 considers the results from the January 14, 2014, sub-slab vapor sampling of SS-1 through SS-3 as abnormal and Section 5.0 suggests batch contamination of the Summa sampling containers may have affected the representativeness of the samples. GPP staff do not consider these conclusions justified because no trip blank sample was analyzed and the samples containing the greatest benzene concentrations (SS-2 and SS-3) were collected from the locations closest to the heart of the dissolved-phase benzene plume. Because limited subsurface vapor sampling data is available and the benzene concentrations in the January 14, 2014, samples from SS-2 and SS-3 exceed the Regional Water Quality Control Board indoor air benzene Environmental Screening Level after applying a default DTSC attenuation factor of 0.05, GPP staff consider it prudent to collect additional sub-slab vapor samples from SS-2 and SS-3 in January 2015 for analysis of gasoline compounds. Please upload to GeoTracker by **April 30, 2015**, all electronic files required by California Code of Regulations Title 23, Division 3, Chapter 30, including a report detailing and justifying the methods, findings, conclusions, and recommendations of the investigation.

GPP staff concur the PCE concentrations reported in sub-slab vapor samples SS-1 and SS-2 indicate a potential PCE inhalation risk to the occupants of the building at 521 East 5th Avenue. Additional corrective action will be necessary to address this issue. However, as previously stated, we will not at this time require the responsible party for the fuel release at the subject site to perform this work.

The report recommends removing the sub-slab vapor probes. We cannot approve this request at this time because of the required additional sampling. Please note, even when subsurface vapor sampling for gasoline compounds is no longer necessary, it may be prudent to leave the probes in-place and transfer their ownership to the property owner and eventually the responsible party for assessment of the PCE impact.

The Electronic Data File (EDF) for the sampling of SS-4 on January 21, 2014, has not been uploaded to GeoTracker as required by State regulations. In addition, GPP staff denied EDFs #1604, 3607, and 7898 (first four numbers listed) because they contained incorrect field point names. Please immediately upload correct versions of these files to complete the vapor sampling task.

Groundwater Monitoring Report

The workplan dated October 12, 2013, recommended additional monitoring wells downgradient of MW-21. GPP staff did not consider this work necessary at the time, but now consider it appropriate to install at least one well on South El Dorado Street given the concentrations of TPHg, ethylbenzene, and naphthalene reported in the groundwater samples from MW-21. It appears a well in front of 514 S. El Dorado Street will satisfy this objective. Please upload to the State GeoTracker database by **April 30, 2015**, all electronic files required by California Code of Regulations Title 23, Division 3, Chapter 30, and discuss the methods, findings, conclusions, and recommendations of the downgradient groundwater investigation in the previously required vapor sampling report.

Please contact me at (650) 372-6292 or at dmilano@smcgov.org if you have any questions.

Sincerely,

Revised every January 1

FA57225

 2014 SUBSURFACE DRILLING PERMIT APPLICATION

REQUIREMENTS:

An accurate & correct map of existing and proposed well/boring locations **must** be included with the permit application. The well/boring location map **must** include the following.

1. North arrow, existing & historic site features, wells, approximate property lines and any other pertinent existing & historic features and information.
2. Proposed well/boring locations to scale.

A work plan describing the drilling and construction/destruction methodology may be requested by County staff. Upon review of information on this application, and subject to approval noted below, a permit will be issued allowing well/boring owner, driller, and responsible professional to perform the specified work. The permit is subject to both General and Special Conditions stated below. A copy of the approved Subsurface Drilling Permit **must** be available on site while work related to the permit is being performed. Drilling may begin at the notified date and time whether County staff is present or not.

GENERAL CONDITIONS:

A. Well and boring construction and destruction under this permit is subject to the Standards for the Construction of Wells in San Mateo County, County Groundwater Protection Program (GPP) Guidelines, Policies & Procedures, the State Water Well Standards, and any instructions by a Health Department representative.

B. Well/Boring Owner, Driller, and Responsible Professional assume responsibility for all activities and uses under the permit, including compliance with Workmen's Compensation Laws, and indemnify, defend and save the County of San Mateo, its' officers, agents and employees, free and harmless from any and all expense, cost, or liability in connection with or resulting from work or stopped-work associated with the permit, including, but not limited to, property damage, personal injury, wrongful death, and loss of income.

C. All borings **must** be properly destroyed (grouted/sealed) within 24 hours of drilling unless special conditions are approved in writing as part of this permit. Borings lasting longer than 24 hours without a variance are considered wells.

D. Analytical results of all soil, vapor, and groundwater samples collected during the execution of drilling under this permit **must** be submitted to County GPP staff by the Responsible Professional within 60 days of sample collection. If contamination is discovered during drilling, verbal notification to County GPP by the Responsible Professional is **required** within 72 hours of discovery. Proper storage, labeling & disposal of investigation-derived residual wastes are the responsibility of the consultant unless stated otherwise contractually.

E. A copy of the State DWR Form 188, boring logs and well construction details for all borings/wells except geotechnical borings, signed by a Responsible Professional, **must** be submitted to County GPP by the Responsible Professional within 60 days of drilling/construction/destruction. As-built locations/dimensions **must** be finalized in subsequent report of findings submitted to County GPP by the Responsible Professional within 60 days of drilling/construction/destruction.

F. Permit is valid only for the purpose specified herein. No change in purpose or required procedures, as described on this permit application, in the associated workplan, or in the special conditions below, will be allowed except upon written permission from the County. Construction aspects can be changed based on conditions encountered in the field.

G. Permit is valid for a mobilization associated with originally permitted boring/well locations only, including contingency locations, and is automatically canceled if not exercised, or if an extension is not applied for and granted within 120 days of the original permit issuance date. Failure to notify staff of cancellation or delay in start time will result in the Consultant being billed an Inspection Cancellation fee of $264 for 2014 if GPP staff attempted to perform an inspection.

H. Wells installed under this permit may not be used for domestic, municipal, agricultural, or irrigation water supply.

I. All work performed **must** conform to Business and Profession Codes and State Water Well Standards.

J. Top-of-casing elevation of all wells **must** be surveyed to the nearest 0.01-foot relative to Mean Sea Level or NAVD88 and submitted to County GPP within 60 days of drilling, and to State GeoTracker as appropriate. Geotechnical wells are exempt from this requirement if a written variance from GPP is obtained prior to drilling.

K. Latitude and longitude of all wells **must** be surveyed with sub-meter accuracy relative to NAD83 and submitted to County GPP within 60 days of drilling, and to State GeoTracker as appropriate.

L. Violation of any requirement or general or special permit condition may result in an order by GPP staff to cease work under this permit, correct the violation, and potentially re-permit the work as a new mobilization.

SPECIAL CONDITIONS: Please e-mail drilling@smcgov.org and dmilano@smcgov.org at least 2 full days prior to drilling to notify us of your start date and time.

For Agency Use Only:

Subject: Letter of Intent – Permit rider #11 for encroachment permit #4819 for monitoring well construction in front of 514 South Eldorado Street `between East 5th Avenue and East 7th Avenue

Dear Ms. Judy Dulik:

Antea™Group (Antea Group) has prepared this letter of intent regarding the proposed construction of monitoring well MW-25 in South Eldorado Street between East 5th Avenue and East 7th Avenue in front of 514 South Eldorado Street. All proposed work is related to 76 Service Station No. 6390, located at 402 South Delaware Avenue in San Mateo, California (see attached site plan). Antea Group will be requesting permit rider #11 for encroachment permit #4819 for the proposed scope of work.

The proposed scope of work is based on letter correspondence from Mr. Deno Milano of the San Mateo County Groundwater Protection Program (GPP), the regulatory overseer for the site, dated October 29, 2014 that has been uploaded to the State GeoTracker database.

Any contaminants found from the testing of the well placed in the public right-of-way are the responsibility of our client, not the City of San Mateo.

Please contact me with any questions or concerns.

Sincerely,

David Sisak
Staff Professional

 2014 SUBSURFACE DRILLING PERMIT APPLICATION

PERMIT APPLICATION INSTRUCTIONS AND FEES

A subsurface drilling permit is required if groundwater is anticipated to be encountered, drilling extends to 10 feet, or groundwater or vapor wells are to be installed or destroyed. San Mateo County Health System Groundwater Protection Program (GPP) is the permitting agency for all subsurface drilling for environmental and geotechnical purposes within San Mateo County except in the City of Daly City. All drilling in the City of Daly City is permitted by the City of Daly City Water and Wastewater Department at (650) 991-8200 with appropriate notification to GPP for GPP lead sites. San Mateo County Health System Land Use Program (LUP) reviews all water well permit applications (www.smhealth.org/environ/forms) for public supply, domestic, agricultural, cathodic protection, exploratory, and geothermal heat exchange well construction and destruction and permit applications for all reconnaissance, investigation, and excavation work strictly for land use purposes. Please contact the LUP at (650) 372-6200 to discuss permitting, notification, and drilling requirements.

A 120-day extension may be granted for permits which have not been used during the original 120-day time frame. Submit another Subsurface Drilling Permit Application and payment for the permit extension fee at 50% of the fee for the type of drilling. Extension must be requested prior to the original permit expiring. If there are several wells and borings over several contiguous assessor's parcels and public right-of-ways, then discuss the fee with the County inspector for that district by calling the main number at the top of the application. The County inspector may charge only one fee for borings and wells constructed across contiguous assessor's parcels and public right-of-ways. However, this is dependent on how much the County inspector believes will need to be inspected in the field and how much review time of required submittals will be needed.

Section 1: Purpose of Application
At least one of the four boxes must be selected; however, multiple boxes may be selected as long as all of the wells and borings are on the same assessor's parcel or public right-of-way (see Section 4). A **boring** under this permit application is defined as a constructed hole lasting less than 24 hours before being properly destroyed. After 24 hours, the constructed hole is considered a **well** under this permit application which needs to be constructed appropriately unless special conditions are approved as part of the permit. If Permit Extension is selected, then write in the permit number of the permit to be extended. List the number of wells and borings anticipated to be drilled and what they will be named. This number may change in the field based on conditions encountered.

Section 2: Purpose of Drilling
At least one of the two boxes must be selected; however, both boxes may be selected as long as both purposes of drilling are to be conducted on the same assessor's parcel or public right-of-way (see Section 4). Geotechnical Drilling may also be conducted under San Mateo County's Annual Geotechnical Drilling Permit in which consulting companies pay an annual fee of $721 for 2014 to perform this type of drilling an unlimited amount of times for 365 days after obtaining the Annual Geotechnical Drilling Permit. Please note, a Notification Form similar to this Subsurface Drilling Permit Application must be completely filled out and submitted at least 2 business days (48 hours) prior to drilling under the Annual Geotechnical Drilling Permit.

Section 3: Lead Agency
One of the three boxes must be selected. The **County Groundwater Protection Program** would be selected only for investigations of known contaminated sites that the County is the lead agency. For drilling required by the Regional Water Quality Control Board **(RWQCB)**, Department of Toxic Substances Control **(DTSC)**, or the United States Environmental Protection Agency **(USEPA)**, please include a copy of their approval letter. **None** would refer to investigations required by the County CUPA (Hazardous Materials Program), County Land Use or Solid Waste Programs, County or City Planning or Building Departments or voluntary investigations for due diligence or property transactions.

Section 4: Drilling Information
All applicable spaces must be filled in. **Agency Case #** refers to the lead agency's case number, if overseen by an agency, for the project under which the investigation is being conducted. **Assessor's parcel number** is the 9-digit number corresponding to the specific private property drilling is proposed to be conducted on (County Assessor's web site wecare.co.sanmateo.ca.us under Property Assessment or www.sanmateocountytaxcollector.org under Secured Property Taxes). Each permit **must** include only one assessor's parcel number. If the drilling is to be conducted only in public right-of-ways, then the assessor's parcel number space should be filled in with NA for not applicable. If drilling is to occur on both a private property and a contiguous public right-of-way, then two permits (one for the private property and one for the public right-of-way) must be filled out. **Address, City, and Zip** refer to the location of the specific property drilling is proposed to be conducted on. The Address for a public right-of-way would simply be the name of the specific section of the public right-of-way (such as 100s block of Main Street). **To be Constructed in** must have one box selected. Again, this differentiates between a public right-of-way and a private property. **Refuse** is a special land use designation which needs to be indicated on the permit application.

 2014 SUBSURFACE DRILLING PERMIT APPLICATION

PERMIT APPLICATION INSTRUCTIONS AND FEES (CONTINUED)

Section 4: Drilling Information (continued)
The rest of this section is self-explanatory, may change in the field based on conditions encountered, and must be filled in except for **Development Method** and **Destruction Method** unless applicable. Schematics may be submitted instead of filling in the well construction details, particularly if wells will be constructed differently from each other.

Destruction Method requires the use of a maximum of 6 gallons of water per 94 pounds of cement. This measurement (for both water and cement) must be able to be demonstrated in the field upon request from the inspector (such as using a 5-gallon bucket for measuring the water and using entire bags of cement). For **pressure grouting**, the well construction log must be submitted. The sand pack may not be more than 3 feet above the top of the screened interval, the screened interval may not be longer than 25 feet, and the bottom of the original boring may not be more than 2 feet deeper than the bottom of the constructed well. The total depth of the well and the fact that there are no obstructions in the well must be verified in the field. Type I/II cement grout must be tremmied into the well, followed by application of 25 psi pressure maintained for 5 minutes (which should be able to be demonstrated in the field). If the well does not meet pressure grouting criteria, it must be destroyed by drilling out to the total depth of the original boring. For **overdrilling**, the well casing and all annular material must be removed using a guide rod for the entire depth of the well prior to drilling, and the boring tremmie grouted to the surface using Type I/II cement grout. A general observation is that grouting borings using a ¾ inch PVC pipe, typically used to collect grab groundwater samples in borings, does not work with a screened section. Free falling grout is only allowed if the boring is dry, or if water is present in less than 10% of the boring, and less than 30 feet deep.

Section 5: Well/Boring Owner
The **name** of the entity owning the wells and borings must be listed along with their contact person (if different from the name of the well/boring owner), address, telephone number, and email address. The **contact person** must be directly associated with or an agent of the entity owning the wells and borings such as a property manager, real estate manager, contractor, or lawyer but not the environmental consultant listed on the permit application in Section 8. A **telephone** number and an **email** address must be provided to allow the inspector to contact the well/boring owner to verify information if necessary. By providing an email address, the well/boring owner will receive an electronic copy of the permit. The permit application must be **signed** and **dated** by either the entity listed as the owner of the wells and borings or the contact person. **Signatures (Sections 5 through 8)** do not need to be original; however, one copy of the permit application must contain all of the information besides the signatures in a legible format. ALL SIGNATURES REQUIRED (SECTIONS 5 THROUGH 8) DO NOT NEED TO BE ON THE SAME COPY OF THE PERMIT APPLICATION.

Section 6: Property Owner
The **name** of the entity owning the property must be listed and needs to match the name listed with the County Assessor for this property. The **contact person** must be directly associated with or an agent of the entity owning the property such as a property manager, real estate manager, contractor, or lawyer but not the environmental consultant listed on the permit application in Section 8. A **telephone** number and an **email** address must be provided to allow the inspector to contact the property owner to verify information if necessary. By providing an email address, the property owner will receive an electronic copy of the permit. The permit application must be signed and dated by the entity listed as the property owner only. AGENTS CAN NOT SIGN FOR THE PROPERTY OWNER. For public rights-of-way, a copy of the Encroachment permit can be substituted for the property owner signature. The City of San Mateo, among others, will not issue an encroachment permit until the subsurface drilling permit is issued, but the City of San Mateo will issue a letter of intent to issue an encroachment permit which is acceptable as a substitute for the property owner signature in City of San Mateo rights-of-way.

Section 7: Drilling Company
The **name** of the company proposed to drill the wells and borings must be listed along with the drilling company **contact person**, address, telephone number, and email address. In addition, the **driller's C57 license number** must be provided. A **telephone** number and an **email** address must be provided to allow the inspector to contact the drilling company to verify information if necessary. By providing an email address, the drilling company will receive an electronic copy of the permit. The permit application must be signed and dated by the driller's contact person. If the drilling company changes, then a new subsurface drilling permit application should be filled out completely except for Sections 5, 6, and 8.

Section 8: Consulting Company
The **name** of the company overseeing the proposed drilling of the wells and borings must be listed along with the **project manager**, address, **telephone** number, and **email** address. The responsible professional overseeing the work must **print** their name legibly, **sign** their name and date, and provide either their **California Professional Geologist or Civil Engineering** number. Field contact name and number, if known, are optional but beneficial for all parties involved.

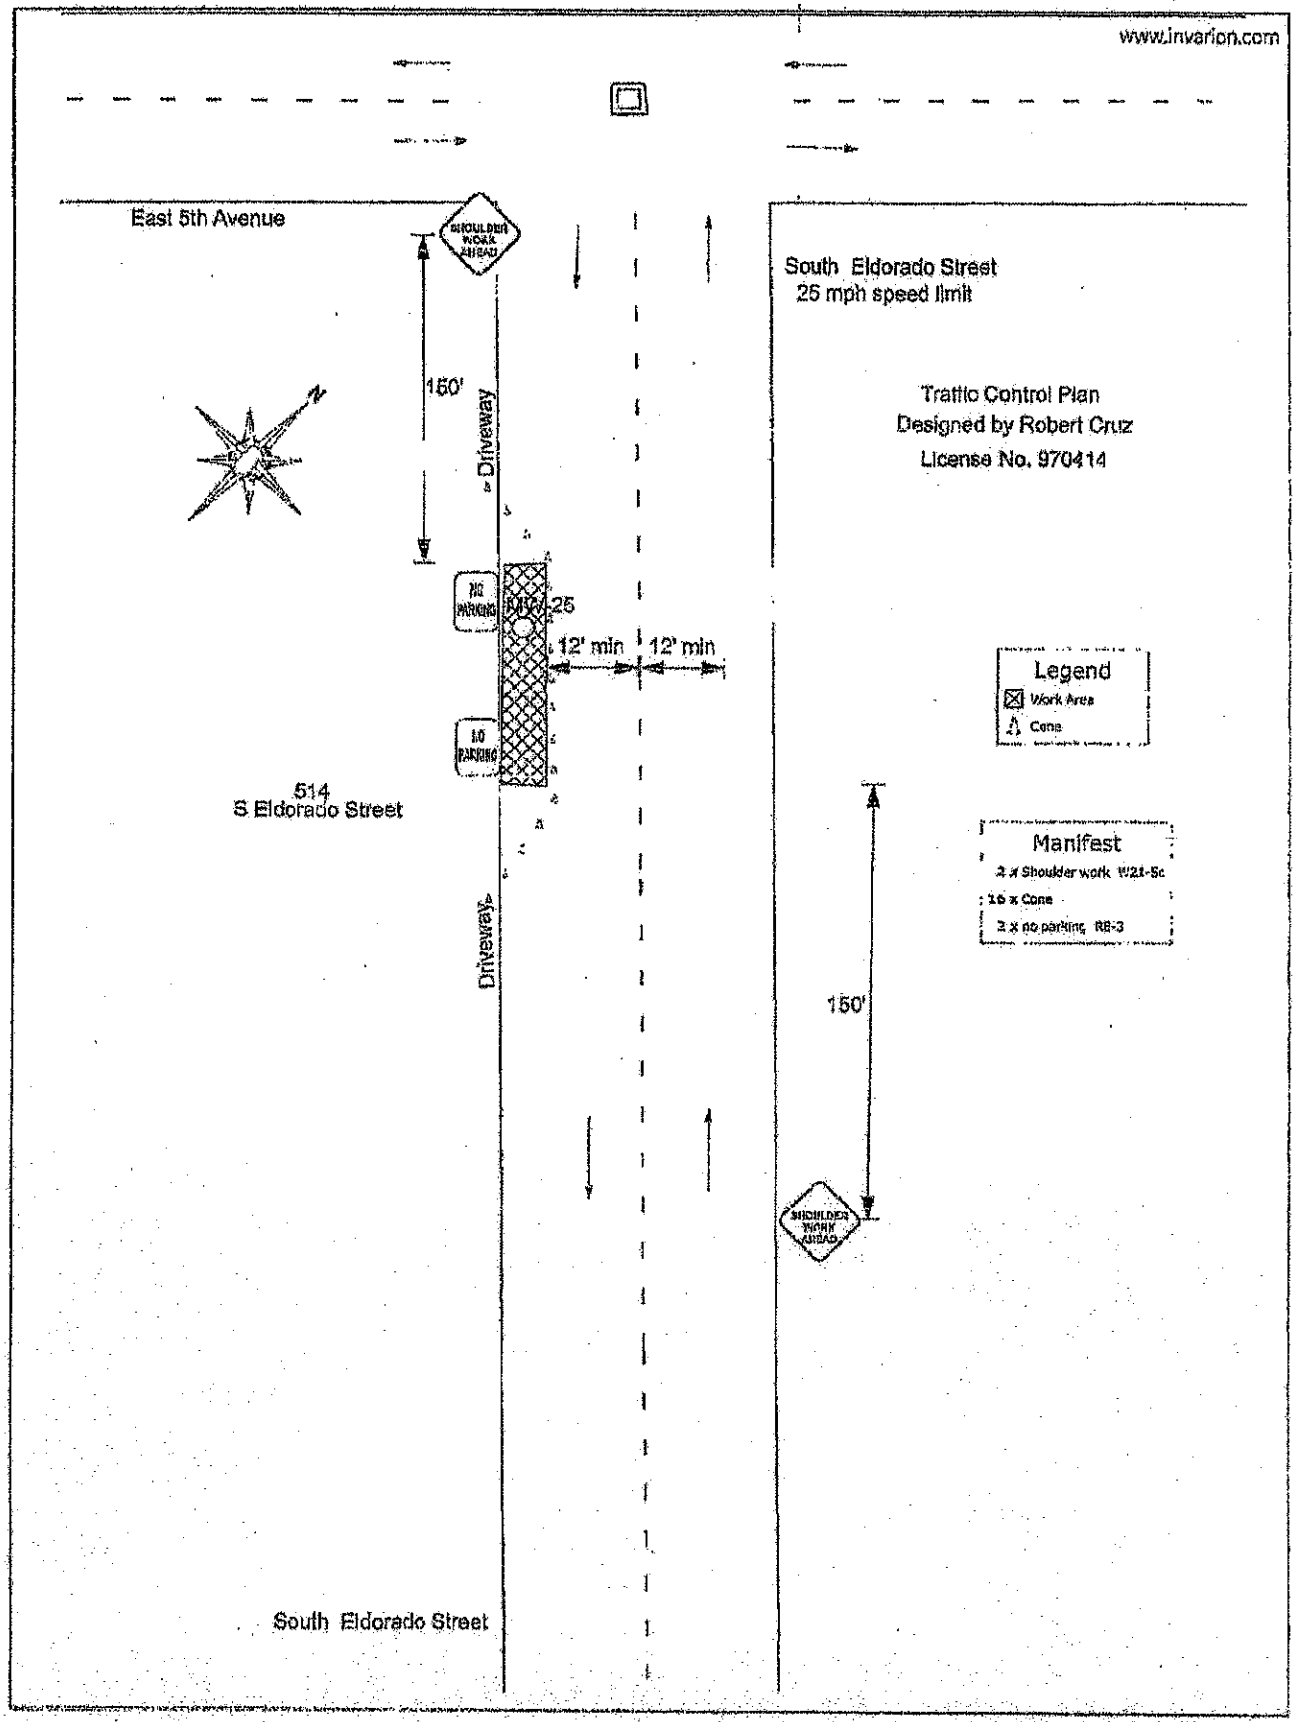
In compliance with (☐ your ☐ our) request, the City of San Mateo, Public Works Department is hereby amending the above-referenced encroachment permit as follows:

Same conditions as original permit and subsequent riders. Authorizes installation of 1 additional monitoring well in front of 514 S Eldorado St per attached site map. Traffic control per CAMUTCD standards and approved attached traffic control plan. **No street closures allowed, must allow through traffic at all times.** Contractor must notify PW Inspections 650/522-7522 xt 6900, Police 650/522-7740, Fire 650/522-7940, and County Communications 650/363-4961, at least 24 - 48 hours before any proposed lane closures. Refund upon submittal of test results, abandonment of all wells and inspection of borings back-fill in the public right-of-way related to this permit.



Permit Expiration Date extended to: ☑ 10/01/15

☐ No Change

Except as amended, all other terms and provisions of the original permit shall remain in effect.

Site Setting and Summary of Previous Environmental Investigations

SITE LOCATION AND BACKGROUND

The site is currently an active "76"-branded service station. The station is located approximately one mile west of San Francisco Bay in San Mateo, California, at an elevation of approximately 20 feet above mean sea level. The site facilities include two fuel underground storage tanks (USTs) located in a common pit in the southeast portion of the property, three product dispenser islands, and a station building. The USTs were installed at the site in August 1992 during station upgrade activities. A 550-gallon waste oil UST formerly located behind the station building was removed from the site in 1992.

The site is bounded to the northeast by South Delaware Street and a Jiffy Lube facility (407 South Delaware Street), to the northwest by East Fourth Street and commercial buildings, to the southwest by a parking lot for a Taco Bell restaurant (500 East 4th Avenue), and to the to the southeast by a Legal Aide of San Mateo building (521 South Delaware Street) and parking area.

There are seven existing or former gasoline service stations within ¼-mile of the site area. The site is located in a mixed commercial and residential area. The nearest residences are southwest of the site at 411 South Claremont, or approximately 50 feet southwest of the site and an apartment building is located at 603 East 5th Avenue approximately 75 feet northeast of the site.

SUMMARY OF PREVIOUS ENVIRONMENTAL INVESTIGATIONS

In August 1992, Kaprealian Engineering, Inc. (KEI) observed the removal of two 12,000-gallon, fiberglass gasoline underground storage tanks (USTs), one 550-gallon waste oil UST, and the associated product piping and dispensers. Upon removal of the tanks, a 9-inch crack was observed along the eastern end of the super unleaded gasoline UST, and two 3/16-inch diameter holes were observed in the waste oil tank. According to an Accident/Incident Investigation Report filed by Unocal on June 3, 1992, a monitoring well had been installed too close to the super unleaded UST, causing the crack. Petroleum hydrocarbon contamination was observed at the eastern end of the gasoline UST cavity. The cavity was over-excavated to remove as much of the impacted soil as possible, resulting in a final excavation that measured approximately 30' by 27' by 22' deep. Initially, six soil samples (A1, A2, B1, B2, SW1, and SW2) were collected from the bottom and sidewalls of the UST cavity, one soil sample (WO1) was collected from the bottom of the waste oil UST cavity, and six soil samples (P1, P2, P3, P4, P5, and P6) were collected from the bottom of the product piping trenches.

At a later date, KEI collected an additional three soil samples (SW1, SW2, and SW3) from the gasoline UST cavity, along with a grab groundwater sample (W1). The water sample was collected after a total of approximately 5,800 gallons of water had been pumped form the gasoline UST cavity. The groundwater had floating product and a heavy sheen. Additionally, KEI collected three soil samples (D1, D2, and D3) from beneath the gasoline dispensers. Laboratory analyses of soil samples collected from the gasoline UST cavity reported relatively high levels of total petroleum hydrocarbons as gasoline (TPHg) benzene, toluene, ethylbenzene, and total xylenes (BTEX compounds), and total petroleum hydrocarbons as diesel (TPHd). The requested petroleum hydrocarbon constituents were not

reported above laboratory detection limits in the soil samples collected from the product piping trenches and from beneath the gasoline dispensers. Laboratory analysis of the soil sample from the waste oil UST indicated the presence of the heavy metals cadmium, chromium, nickel, lead and zinc, while the remaining petroleum hydrocarbon constituents were not indicated at concentrations above the laboratory detection limits. High levels of TPHd, TPHg, and BTEX compounds were also reported in the groundwater sample.

In May 1994, KEI installed three monitoring wells (MW-1, MW-2 and MW-3) at the site. Laboratory analyses of the soil samples collected from the borings for monitoring wells MW-2 and MW-3 indicated the presence of TPHg and BTEX compounds. The requested petroleum hydrocarbon constituents were not reported above laboratory detection limits in the soil samples collected form the MW-1 borehole. The wells were initially gauged and sampled in June 1994. Laboratory analyses of the water samples collected from MW-2 and MW-3 reported the presence of petroleum hydrocarbons in MW-2 and MW-3. The depth to water ranged from 15.33 to 16.71 feet below ground surface (bgs) with a groundwater gradient reported at 0.004 foot/foot to the east. KEI concluded to follow a three-month (quarterly) monitoring program.

In March 1995, two additional monitoring wells (MW-4 and MW-5) were installed at downgradient, off-site locations in the sidewalk along the opposite side of South Delaware Street from the site. Laboratory analyses of the soil samples collected from the monitoring well boreholes indicated the presence of TPHg and BTEX contamination in MW-4. The new wells were added to the quarterly groundwater monitoring program and were first sampled in April 1995. Laboratory analyses of the water samples collected from MW-4 and MW-5 indicated the presence of maximum concentrations of 150,000 micrograms per liter (µg/L) TPHg, 12,000 µg/L benzene, 40,000 µg/L toluene, 4,700 µg/L ethylbenzene, and 31,000 µg/L total xylenes reported in MW-4.

In January 1996, GeoStrategies (GSI) observed the excavation and removal of a 150 gallon capacity oil/water separator. A confirmation soil sample (OWS-S-4.5) was collected from underneath the oil/water separator at a depth of 4.5 feet bgs. Laboratory analysis of the sample indicated the presence of trace concentrations of TPHd, toluene, and total xylenes. Additionally, the presence of the heavy metals chromium, nickel, lead, and zinc were indicated at concentrations of 160 milligrams per kilogram (mg/kg), 99 mg/kg, 13 mg/kg, and 69 mg/kg, respectively. Tetrachloroethylene (PCE) and other chlorinated solvents were not present in the soil sample.

In February 1996, KEI supervised the advancement of three Geoprobe® soil borings (SP1, SP2, and SP4) at off-site locations. The soil borings were terminated at a depth of 13 feet bgs, with groundwater encountered at approximately 10.5 feet bgs. Grab groundwater samples were collected from each borehole. Laboratory analyses of the water samples reported low to moderate levels of TPHg, benzene, ethylbenzene, and total xylenes in the sample from boring SP-4. Petroleum hydrocarbon constituents were not reported above laboratory detection limits in the groundwater samples from borings SP-1 and SP-2.

In June 1996, Pacific Environmental Group, Inc. (Pacific) performed a well survey and reviewed California Department of Water Resources (DWR) well records. One documented well was identified within a ¼-mile radius of the site.

In December 2006 and January 2007, SECOR supervised the following activities: advancement of four direct push soil borings (SP-5 through SP-8), the installation of three soil vapor wells (VP-1 through VP-3) and four additional groundwater monitoring wells (MW-6 through MW-9), and the destruction of four groundwater monitoring wells (MW-1, MW-2, MW-3, and MW-5). Laboratory analyses of soil samples collected indicated the presence of up to 1,300 mg/kg total purgeable petroleum hydrocarbons (TPPH, MW-6@16.5-17), 0.18 mg/kg benzene (MW-6@11-11.5), 32 mg/kg toluene (MW-6@11-11.5), 20 mg/kg ethylbenzene (MW-6@11-11.5), 110 mg/kg total xylenes (MW-6@11-11.5), and 0.089 mg/kg methyl tertiary butyl ether (MTBE, MW-6@19.5-20). Grab groundwater sample analytical results indicated the presence of up to 51,000 µg/L TPPH (SP-8), 1,300 µg/L benzene (SP-5), 1,500 µg/L toluene (SP-5), 3,000 µg/L ethylbenzene (SP-8), 9,600 µg/L total xylenes (SP-8), and 330 µg/L MTBE (SP-5). Groundwater samples from MW-6 and MW-9 reported petroleum hydrocarbons. Laboratory analyses of the soil vapor samples indicated the presence of up to 0.75 micrograms per liter (µg/L) TPPH (VP-3), up to 16 µg/L toluene (VP-1), 14 µg/L ethylbenzene (VP-3), 42 µg/L m,p-xylenes (VP-3), and 29 µg/L o-xylenes (VP-3).

Based on the results of this investigation, SECOR concluded that hydrocarbons in soil had been adequately delineated, the lateral extent of hydrocarbons in groundwater had been delineated up-gradient and cross-gradient, the lateral extent of hydrocarbons in deeper groundwater had been delineated to the southwest (cross-gradient) by SP-7, and that vapor inhalation did not appear to be an exposure pathway at the site. SECOR recommended installation of a downgradient well in the shallow water bearing zone and downgradient wells in the deeper water bearing zone along East Fifth Avenue and Delaware Street, and to the northwest and northeast (up and cross-gradient) of the site. SECOR recommended groundwater analyses and historical research to identify the possible source of tetrachloroethylene (PCE) in groundwater.

In August 2008, Stantec oversaw the installation of two shallow groundwater monitoring wells (MW-10 and MW-11), and four deeper zone wells (MW-12B, MW-13B, MW-14B, and MW-15B) at locations down-gradient of the subject site. This included the collection of both soil and groundwater samples from the new wells. Stantec also completed a sensitive receptor survey (SRS) as part of this investigation (see below). Stantec concluded that petroleum hydrocarbon plumes in groundwater had been delineated by the new wells, but recommended continued semiannual groundwater monitoring. No additional evaluation of sensitive receptors was recommended based on findings of the SRS (where no sensitive receptors were identified in the immediate down-gradient direction of the site).

Between 2009 and 2010, Delta Consultants prepared an investigation work plan to assess the PCE contamination in groundwater in the vicinity of the site. The San Mateo GPP did not accept the *Potential Source Evaluation and Tetrachloroethene (PCE) Source Evaluation Revised Work Plan on October 29, 2010.* Delta Consultants revised and resubmitted the work plan to the GPP.

In February 2011, Antea Group (formerly Delta Consultants) received conditional approval from the lead oversight agency, San Mateo County GPP, of their October 29, 2010 submittal titled *Potential Source Evaluation and Tetrachloroethene (PCE) Source Evaluation Revised Work Plan.*

Between May and June 2011, Antea Group oversaw the installation of one additional groundwater monitoring well MW-17B, and the advancement of six soil borings SB-1 and SB-3 through SB-7 to assess the potential up-gradient presence of PCE in soil and groundwater, as well as to further quantify the degree and extent of on-site and downgradient hydrocarbon contamination associated with the subject site. Details of the investigation are presented in the July 2011 *Potential Tetrachloroethylene (PCE) Source Investigation Report*.

In April and May 2012, Antea Group completed additional delineation of gasoline contaminants in groundwater to the east and southeast of the USTs, as well as the determining whether or not the subject site is a likely contributor to the PCE contaminant plume present in the regional groundwater. Antea Group oversaw the installation of soil borings SB-8 and SB-9, temporary well TW-1, and monitoring wells MW-18 and MW-19. Also, Antea Group oversaw the destruction of shallow well MW-10, replaced with new well MW-10R at a deeper screened interval. Antea Group submitted the *Additional Site Investigation Report* summarizing the April and May field activities to the GPP on **July 6, 2012**.

On **September 7, 2012**, Antea Group submitted an *Additional Groundwater and Vapor Investigation Work Plan* to the GPP. In this Work Plan, Antea Group proposed installing two additional monitoring wells downgradient of wells MW-10R and MW-18, as well as two nested vapor wells adjacent to the neighboring, off-site buildings.

In March 2013, Antea Group installed monitoring wells MW-20 and MW-21, to further define the shallow groundwater contaminant plume, in general accordance with the *Additional Groundwater and Vapor Investigation Work Plan* dated September 7, 2012. In addition, soil boring SB-11 was advanced and monitoring well MW-11 was destroyed per GPP request.

In June and July 2013, Antea Group installed monitoring wells MW-22 through MW-24 to assess the contribution of PCE from the former waste oil UST (MW-22), to assess PCE concentrations upgradient of the site (MW-23), and to further define the extent of the shallow groundwater contaminant plume (MW-24). Antea Group also advanced soil boring SB-10 to assess onsite shallow soil conditions near the tank pit. Antea Group submitted the *Additional Soil and Groundwater Investigation Report* summarizing field activities to the GPP on **July 17, 2013**.

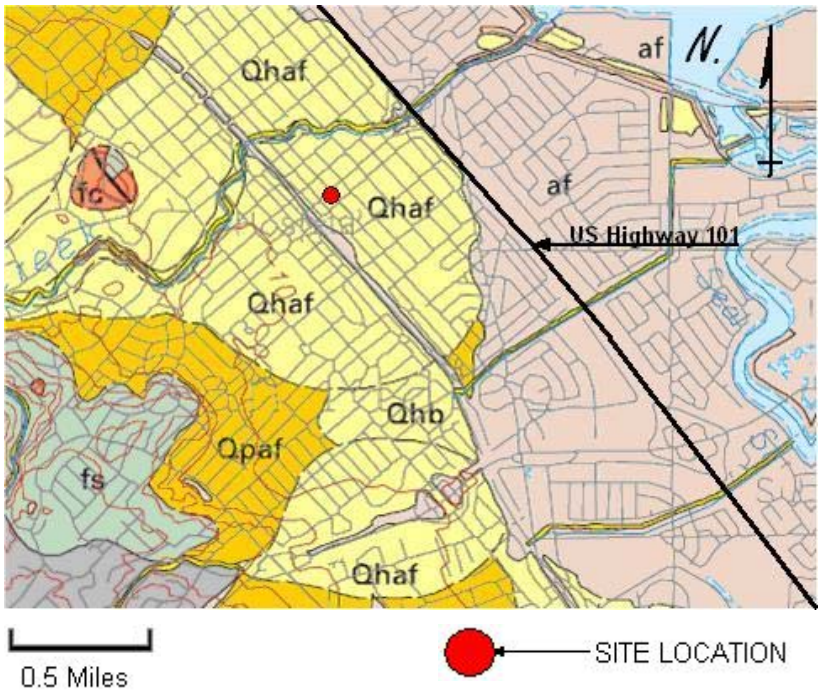
In August 2014, Antea Group installed and sampled sub-slab soil vapor probes SS-1 through SS-4 off-site to assess soil vapor conditions within the hydrocarbon contaminant plume beneath the residential and commercial properties adjacent to and downgradient of the site. Vapor samples were collected in August 2013 and January/February 2014. The findings were submitted by Antea Group in *Vapor Assessment Report* dated **May 29, 2014**.

In **January 2015**, Antea Group conducted a cold season sampling event on January 14, 2015 at sub-slab vapor points SS-2 and SS-3 per GPP request dated October 29, 2014.

In **January 2015**, Antea Group installed monitoring well MW-25 downgradient of MW-21 to further define the shallow groundwater contaminant plume, in general accordance with GPP correspondence dated October 29, 2014.

Sensitive Receptors

In 1996, a well survey was performed by Pacific. Four wells (three cathodic protection wells and one irrigation well) were identified within ¼-mile of the site. The City of San Mateo confirmed that there are two irrigation wells in Central Park (approximately 2,544 feet south of the site) and one irrigation well at King Center (approximately 3,648 north-northwest of the site).



Stantec performed a sensitive receptor survey within a ½-mile radius of the site during July 2008. A detailed parcel survey was performed at a 500-foot radius around the site. Research of the DWR well completion record database identified one irrigation well located approximately 2,208 feet north-northeast of the Site at 1015 2nd Avenue, San Mateo. The well was installed in 1953 to a depth of 46 feet bgs with a screened interval of 30 to 46 feet bgs. There was one surface water body (San Mateo Creek) identified within the limits of the ½-mile survey, approximately 1,488 feet north of the site. In their 2009 *Additional Assessment and Sensitive Receptor Survey Report* prepared for Former Tosco 76 Station #4178, Stantec identified an inactive irrigation well at 728 E 4th Ave, approximately 600 feet Northeast of the site. Stantec also identified a preschool at 713 2nd Avenue which utilized sump pumps to dewater their basement which also serves as a classroom. In their 2012 *Site Conceptual Model*, Conestoga-Rovers and Associates (CRA) additionally identified an irrigation well at 216 El Dorado Street, which is approximately 600 feet NNE of the site.

SITE SETTING

Regional Geologic Setting

The site is located on an alluvial plain extending from the Santa Cruz Mountains to the east to the San Francisco Bay. The geologic map of the vicinity below shows that the site is underlain by alluvial fan and fluvial deposits (Qhaf). Near the edge of San Francisco Bay, the deposits consist of medium dense sands that fine upward to sandy or silty clay (E.E. Brabb, et al., 1998). Other deposits in the area are heterogeneous artificial fill (af) and basin deposits (Qhb) consisting of fine silty clay to clay deposits.

Geologic Map of Vicinity

GEOLOGY OF THE ONSHORE PART OF SAN MATEO COUNTY, CALIFORNIA: DERIVED FROM THE DIGITAL DATABASE OPEN-FILE 98-137

Regional Hydrogeologic Setting

The site is located within the Santa Clara Valley groundwater basin and South Bay hydrologic planning area. Groundwater throughout the area flows typically northeasterly, originating in the Santa Cruz Mountains to the west and flowing towards San Francisco Bay. The basin is composed of alluvial fan deposits formed by tributaries to San Francisco Bay. The water-bearing formations comprise two groups; the Santa Clara Formation of the older Plio-Pleistocene age and the Quaternary age alluvial deposits. The shallow alluvial deposits overlie the Santa Clara Formation and have a maximum depth of about 1,250-feet.

Quaternary age alluvium consists of sand, gravel, silt, and clay deposits that are about 100-feet thick and average about 60-feet thick. The Pliocene age San Mateo Formation consists of deposits of marine sand, gravel, silt, and clay, which are locally water-bearing (DWR 2003).

The prominent groundwater flow direction is to the east toward San Francisco Bay. There is one surface water body identified within the limits of the ½ -mile survey. San Mateo Creek is located approximately 1,488-feet north of the site.

Site Hydrogeologic Setting

Soils beneath the site consist primarily of sands with varying amounts of clay and silt and clays with varying amounts of sand to the total depth explored of 40 feet bgs. Groundwater is typically encountered in borings at approximately 15 feet bgs, however first encountered water has ranged from approximately 13 feet bgs to 30 feet bgs. Groundwater elevation in monitoring wells equilibrates at approximately 1 foot referenced to NAVD 88.

With respect to groundwater, a shallow groundwater zone (i.e., groundwater in the upper 20 feet bgs) that is present near the USTs and downgradient of the site (demonstrated by water in MW-6, MW-10R, MW-18, MW-19, MW-21 and periodically in wells MW-9, MW-11, MW-22 and MW-24), is not continuous along the western boundary of the site, indicating locally semi-confined conditions in the eastern portion of the site. Antea Group set a screened interval in TW-1 from 15 to 20 feet bgs, but after leaving it overnight, no water was present. In SB-8, grab water sampling was attempted from 19 to 20 feet bgs, and from a screened interval left in place from 19.5 to 24.5 feet bgs. After several hours and no signs of water, the screen was removed and the boring was advanced to 30 feet bgs. In both TW-1 and SB-8, which had temporary screened intervals from 25 to 30' bgs, the water levels rose to 15.46 feet in TW-1, and to 14.50 feet in SB-8, after leaving each overnight. Well MW-23 (deep well) was installed west of the site, and water was not encountered until approximately 30 feet bgs.

The deep groundwater bearing zone occurs at varying depths at the site, but typically below 18 feet bgs. The shallow and deep zones are separated in portions of the site by a semi-continuous thin layer of clay/silt which is varies from a foot to several feet in thickness.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 15-01-0805 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 01/15/15. They were assigned to Work Order 15-01-0805.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

New York NELAP air certification does not certify for all reported methods and analytes, reference the accredited items here: http://www.calscience.com/PDF/New_York.pdf

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Glossary of Terms and Qualifiers

Work Order: 15-01-0805 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

3.	Were samples prepared (extracted, filtered, etc.) within EPA holding times?	**Yes** /	**No**
4.	Once prepared/extracted, were the samples analyzed within the EPA holding times?	**Yes** /	**No**
5.	Were Laboratory blanks performed, if so, were they non-detect?	**Yes** /	**No**
6.	Are the units correct? (i.e., soil samples in mg/kg or ug/g, water samples mg/L, ug/L, and air samples in volume mg/m^3,etc.)	**Yes** /	**No**
7.	Were appropriate Matrix Spike (MS) and Matrix Spike Duplicate (MSD) samples included in the laboratory batch sample?	**Yes** /	**No**
8.	Were blank spike (SS or LCS) or blank spike duplicate (SSD or LCSD) samples included in the laboratory batch samples?	**Yes** /	**No**
9.	Were QA/QC samples (MS/MSD, SS/SSD, LCS/LCSD) within the shown acceptable range of % recovery?	**Yes** /	**No**
10.	Were MS/MSD (or SS/SSD) values used to calculate Relative Percent Difference (RPD)?	**Yes** /	**No**
11.	Were Relative Percent Difference values within the acceptable range (i.e. ±25%)?	**Yes** /	**No**
12.	Were surrogate recoveries within the acceptable range (i.e. ±30%)?	**Yes** /	**No**

For a 'no' answer, explain why and what corrective action was taken (use additional sheet(s), as necessary:

MS/MSD were not performed, however Sample Spike/Sample Spike Duplicate and LCS/LCSD were performed and all were within acceptable ranges of recovery, with acceptable RPD, which is sufficient to demonstrate the data is valid.

Appendix E

Standard Operating Procedures

SOIL BORING ADVANCEMENT AND WELL INSTALLATION

Utility Locating

Prior to drilling, boring and excavation locations and an approximate 15-foot by 15-foot box are marked with white paint or other distinct marking and cleared for underground utilities through Underground Service Alert (USA). In addition, Antea Group will contract an independent locator services to clear boring or excavation locations of subsurface assets. The first five feet (or more in instances where utilities are suspected in close proximity) of each borehole are air-knifed, or carefully advanced with a hand auger if shallow soil samples are necessary, to help evaluate the borehole location for underground structures or utilities in accordance with Antea Group's subsurface hazard avoidance policy.

Borehole Advancement using Single-Wall GeoProbe®

Pre-cleaned push rods (typically one to two inches in diameter) are advanced using a hydraulic direct push-type rig for the purpose of collecting samples and evaluating subsurface conditions. The sample barrel located at the leading end of the drill rod serves as a soil sampler, and an acetate liner is inserted into the sample barrel rod prior to advancement of the push rod. Once the sample is collected, the rods and sampler are retracted and the acetate sample tubes are removed from the sampler. The sample barrel is then cleaned, filled with clean acetate liners, inserted into the borehole and advanced to the next sampling point where the sample collection process is repeated.

Undisturbed soil samples selected for laboratory analysis are cut away from the acetate sample liner using a hacksaw, or equivalent tool, in sections approximately 6 inches in length. The 6 inch samples are lined at each end with Teflon® sheets and capped with plastic caps. Labels documenting project number, borehole identification, collection date, and depth are affixed to each sample. The samples are then placed into an ice-filled cooler for delivery under chain-of-custody to a laboratory certified by the State of California for analysis. The remaining collected soil that has not been selected for laboratory analysis is logged using the United Soil Classification System (USCS) under the direction of a State Registered Professional Geologist, and is field screened for organic vapors using a photo ionization detector (PID), or an equivalent tool.

Borehole Advancement using Hollow Stem Auger

Pre-cleaned hollow stem augers (typically 8 to 10 inches in diameter) are advanced using a drill rig for the purpose of collecting samples and evaluating subsurface conditions. Often, the borehole location if first sampled using Single-Wall Geoprobe procedures described above. If Geoporbe is not use, then a pre-cleaned split spoon sampler is lined with three 6-inch long brass or stainless steel tubes and attached to the drill rods. The sampler is then driven 18 inches into the underlying soils at the target sample interval by repeatedly dropping a 140-pound hammer over a 30-inch free fall distance. The number of blow counts to drive the sampler each 6-inch interval of sampler advancement are recorded on the field logs. The sampler is driven 18 inches or until the sampler has met refusal (typically 50 blows per six inches), then the sampler is retrieved. Alternatively, soil samples are retrieved by driving the sampler using a pneumatic hammer, when using a limited access rig.

Generally the bottom sample tube is selected for laboratory analysis. The middle tube is extruded for logging and PID screening, and the top tube is considered slough caved off from the sides of the boring prior to sampling. The retained

sample is carefully packaged for chemical analysis by capping each end of the sample with a Teflon sheet followed by a tight-fitting plastic cap and stored in a zip-type plastic bag. A label is affixed to the sample indicating the sample identification number, borehole number, sampling depth, sample collection date, and job number. The sample is then annotated on a chain-of-custody form and placed in an ice-filled cooler for transport to the laboratory.

During the drilling process, a physical description of the encountered soil characteristics (i.e. moisture content, consistency or density, odor, color, and plasticity), drilling difficulty, and soil type as a function of depth are described on boring logs. The soil cuttings are classified in accordance with the USCS.

Hand Auger Borings

Hand auger borings are advanced to shallow depth – typically not exceeding 15 feet bgs. The hand auger boring is typically between 2 and 4 inches in diameter. Soil samples are collected either directly from the hand auger bucket, or using a slide hammer if subsurface conditions allow. Soil samples are contained in one to two-inch diameter, 6-inch long brass soil rings, lined on each end with Teflon sheeting and sealed with plastic end caps. Once the hand auger boring is advanced to the total depth, the boring is abandoned by using a tremmie pipe to grout the borehole from the bottom up. The boring location is capped with concrete.

Grab Groundwater Sample Collection

Once the target groundwater sampling depth has been reached, a one inch diameter schedule 80 polyvinyl chloride (PVC) temporary well casing equipped with five feet of 0.02-inch machine slotted screen and a pre-attached san pack is lowered into the borehole. Grab groundwater samples are collected by lowering a pre-cleaned, single-sample polypropylene, disposable bailer or pre-cleaned stainless steel bailer down the inside of the temporary well casing. The groundwater sample is decanted from the bailer to the sample container through a bottom emptying flow control valve to minimize volatilization.

Collected water samples are decanted directly into laboratory provided, pre-cleaned, vials or containers and sealed with Teflon-lined septum, screw-on lids. Labels documenting sample number, well identification, collection date, and type of preservative (if applicable, i.e. HCl for volatile organic compound analysis) are affixed to each sample. The samples are then placed into an ice-filled cooler for delivery under chain-of-custody to a laboratory certified by the State of California to perform the specified tests.

Borehole Completion

Upon completion of drilling and sampling, the inner casing rods are retracted. Neat cement grout, mixed at a ratio of 6 gallons of water per 94 pounds of Portland cement, is introduced via a tremie pipe to displace standing water in the borehole, through the annulus of the outer casing rods. The outer rods are retracted as the grout is introduced to bottom of the boring to prevent the cross contamination of encountered water bearing zones. Displaced groundwater is collected at the surface and placed into DOT approved 55-gallon steel drums, or an equivalent storage container. In areas where the borehole penetrates asphalt or concrete, the borehole is capped with an equivalent thickness of asphalt or concrete patch to match finished grade.

Well Construction (typical)

Selected borings will be converted to groundwater monitoring wells by the installation of 2-inch diameter schedule 40 pvc well casing with 0.020-inch factory slotted well screen as stated in the body of the work plan. A filter pack of Monterey #2/16 grade sand (or equivalent) will be placed in the annular space of the monitoring well borings, extending from the bottom of each well casing to one or two-feet above the top of the screened casing. After emplacement of the sand pack, the submerged screen length is surged using a surge block in order to settle the sand pack. After settlement of the sand pack, a sanitary seal consisting of a 2-foot bentonite is placed on above the filter sand and charged with water to create a seal. Neat cement grout, mixed at a ratio of 6 gallons of water per 94 pounds of Portland cement, is introduced via a tremie pipe to displace standing water in the well annulus bentonite to within two feet of the ground surface. A traffic-rated well box will be installed on each well to protect and finish the well to surface grade.

The groundwater monitoring wells will be allowed to stabilize for a minimum of 72 hours after installation prior to development. Following development, the wells will be allowed stabilize for a minimum of 48 hours prior to the collection of any groundwater samples.

Organic Vapor Reading Collection

Soil samples are collected for analysis in the field for ionizable organic compounds using a PID with a 10.2 eV lamp. The test procedure involves measuring approximately 30 grams from an undisturbed soil sample, placing this sub-sample in a Zip-type bag or foil-wrapped jar. The container is warmed for approximately 20 minutes in the sun; then the head-space within the container is tested for total organic vapor, measured in parts per million as benzene (ppm; volume/volume). The instrument is calibrated prior to drilling. The results of the field-testing are noted on the boring logs. PID readings are useful as a qualitative indication of relative levels of contamination, but cannot be used to quantify petroleum hydrocarbon concentrations with the confidence of laboratory analyses.

Equipment Decontamination

Equipment that could potentially come in contact subsurface media and compromise the integrity of the samples is carefully decontaminated prior to drilling and sampling. Drilling auger and other large pieces of equipment are decontaminated using high pressure hot water spray. Soil and groundwater sampling apparatus, groundwater pumps, liners and other equipment are decontaminated in an Alconox scrub solution and double rinsed in clean tap water rinse followed by a final distilled water rinse.

The rinsate and other wastewater are contained in 55-gallon DOT-approved drums, labeled (to identify the contents, generation date and project) and stored on-site pending waste profiling and disposal.

Waste Handling and Disposal *(Soil Cuttings and Rinsate/Purge Water)*

Soil cuttings and rinsate/purge water generated during drilling and sampling are stored on-site in DOT-approved 55-gallon steel drums pending characterization. A label is affixed to the drums indicating the contents of the drum, suspected contaminants, date of generation, and the boring number from which the waste is generated. The drums are removed from the site by a licensed waste disposal contractor to an appropriate facility for treatment/recycling.

VAPOR SAMPLING

Sampling Train

The sampling apparatus consists of a one or six-liter Summa canister for sample collection and a second 6-liter Summa canister for system purging. The sample train consists of a Swagelok® plug valve, connected by Teflon tubing to a T-fitting which enables the sampling canister and the purge canister to be in-line at the same time. All Summa canisters are equipped with a vacuum gauge, and a flow regulator set to 150 milliliters/minute (mL/min) with an inline vacuum gauge to measure down-hole vacuum.

Shut In Pressure Test

Prior to purging or sample collection, a shut-in pressure test of the sampling train between the Summa® canisters and the vapor plug valve is performed for five (5) minutes by opening and closing the purge canister valve. The vapor tight Swagelok® plug valve remains closed during the process. The initial vacuum reading on the summa is noted, and if that vacuum is not maintained for five (5) minutes, the sampling train is retightened until the vacuum is maintained. The pressure test ensures that the sampling manifold is an air-tight system so that only vapors from beneath the slab are being captured.

Helium Shroud

Once the sample train passes the shut in pressure test, the plug valve is opened, and a 5-gallon bucket is emplaced over the plug valve and T-fitting. A line for helium supply is placed under the shroud, as well as the helium detector. The shroud is sealed in place with bentonite that has been hydrated with distilled water. Helium is then introduced into the shroud and allowed to equilibrate for five minutes prior to sampling. Helium concentrations will be recorded every minute during the equilibration time and purge time, and every 30 seconds during sampling. The concentration in the shroud will be kept above 30%, and efforts will be made to keep within 10% of the target value.

Vapor Purge

After the sampling train passes the shut in pressure test, and the helium atmosphere has had 5 minutes to equilibrate, the vapor probe or well can be purged. Antea Group uses a default 3 purge volumes for vapor wells that are five feet deep or less. One purge volume is calculated using the volume of air in the sand pack and un-hydrated bentonite seal, plus the sample train volume. For sub slab points, Antea Group used a two-liter purge[1]. During purging, the inline vacuum gauge will be monitored to assure that vacuum in the well or probe does not increase above 100 inches of water. Purging is conducted using the 6-Liter purge Summa canister, and the purge volume is considered complete once an appropriate vacuum drop is observed. Helium concentrations in the shroud and vacuum are recorded approximately every minute during purging.

Vapor Sampling

Once purging is complete, the purge Summa canister is closed and the sample Summa canister is opened, the time noted,

[1] Environmental Protection Agency (EPA), Standard Operating Procedure (SOP) for Installation of Sub-Slab Vapor Probes and Sampling Using EPA Method TO-15 to Support Vapor Intrusion Investigations.

and helium concentrations recorded every 30 seconds to a minute in a 1-Liter summa canister, and every 2 to 3 minutes in a 6-Liter Summa canister. Sampling is stopped when the vacuum gauge reads -5 inHg.

Rainfall/ Barometric Pressure Considerations

Vapor sampling will not take place in outdoor vapor wells within five days of a significant rainfall (1/2 inch over 24 hour period). Vapor sampling indoor or outdoor may not take place during the passage of a frontal system.

Blaine Tech Services' Groundwater Sampling Procedures

BLAINE TECH SERVICES, INC.
METHODS AND PROCEDURES
FOR THE ROUTINE MONITORING OF
GROUNDWATER WELLS

SAMPLING PROCEDURES OVERVIEW

SAFETY

All groundwater monitoring assignments performed for DELTA comply with safety guidelines, 29 CFR 1910.120 and SB-198 Injury and Illness Prevention Program (IIPP). All Field Technicians receive the full 40 hour 29CFR 1910.120 OSHA SARA HAZWOPER course, medical clearance and on-the-job training prior to commencing any work on any DELTA COP/ELT site.

INSPECTION AND GAUGING

Wells are inspected prior to evacuation and sampling. The condition of the wellhead is checked and noted according to a wellhead inspection checklist.

Standard measurements include the depth to water (DTW) and the total well depth (TD) obtained with industry standard electronic sounders which are graduated in increments of hundredths of a foot.

The water in each well is inspected for the presence of Immiscibles or sheen and when free product is suspected, it is confirmed using an electronic interface probe (e.g. MMC). No samples are collected from a well containing free product.

EVACUATION

Depth to water measurements are collected by our personnel prior to purging and minimum purge volumes are calculated anew for each well based on the height of the water column and the diameter of the well. Expected purge volumes are never less than three case volumes and are set at no less than four case volumes in some jurisdictions.
Well purging devices are selected on the basis of the well diameter and the total volume to be evacuated. In most cases the well will be purged using an electric submersible pump (i.e. Grundfos) suspended near (but not touching) the bottom of the well. Small volumes of purgewater are often removed by hand bailing with a disposable bailer.

PARAMETER STABILIZATION

Well purging completion standards include minimum purge volumes, but additionally require stabilization of specific groundwater parameters prior to sample collection. Typical groundwater parameters used to measure stability are electrical conductivity, pH, and temperature. Instrument readings are obtained at regular intervals during the evacuation process (no less

than once per case volume).

Stabilization standards for routine quarterly monitoring of fuel sites include the following: Temperature is considered to have stabilized when successive readings do not fluctuate more than +/- 1 degree Celsius. Electrical conductivity is considered stable when successive readings are within 10%. pH is considered to be stable when successive readings remain constant or vary no more than 0.2 of a pH unit.

DEWATERED WELLS

Normal evacuation removes no less than three case volumes of water from the well. However, less water may be removed in cases where the well dewaters and does not recharge.

Wells known to dewater are evacuated as early as possible during each site visit in order to allow for the greatest amount of recovering. Any well that does not recharge to 80% of its original volume will be sampled prior to the departure of our personnel from the site in order to eliminate the need of a return visit.

In jurisdictions where a certain percentage of recovery is included in the local completion standard, our personnel follow the regulatory expectation.

PURGEWATER CONTAINMENT

All non-hazardous purgewater evacuated from each groundwater monitoring well is captured and contained in on-board storage tanks on the Sampling Vehicle and/or special water hauling trailers. Effluent from the decontamination of reusable apparatus (sounders, electric pumps and hoses etc.), consisting of groundwater combined with deionized water and non-phosphate soap, is also captured and pumped into effluent tanks.

Non hazardous purgewater is transported under standard Bill of Lading or Non-Hazardous manifest to a Blaine Tech Services, Inc. facility before being transported to an approved disposal facility.

SAMPLE COLLECTION DEVICES

All samples are collected using disposable bailers.

SAMPLE CONTAINERS

Sample material is decanted directly from the sampling bailer into sample containers provided by the laboratory which will analyze the samples. The type of sample container, material of construction, method of closure and filling requirements are specific to the intended analysis. Chemicals needed to preserve the sample material are commonly placed inside the sample containers by the laboratory or glassware vendor prior to delivery of the bottle to our personnel. The laboratory sets the number of replicate containers.

TRIP BLANKS

Upon request, a Trip Blank is carried to each site and is kept inside the cooler for the duration of the sampling event. It is turned over to the laboratory for analysis with the samples from that site.

DUPLICATES

Upon request, one Duplicate sample is collected at each site. It is up to the Field Technician to choose the well at which the Duplicate is collected. Typically, a duplicate is collected from one of the most contaminated wells. The Duplicate sample is labeled DUP thus rendering the sample blind.

SAMPLE STORAGE

All sample containers are promptly placed in food grade ice chests for storage in the field and transport (direct or via our facility) to the analytical laboratory that will perform the intended analytical procedures. These ice chests contain quantities of restaurant grade ice as a refrigerant material. The samples are maintained in either an ice chest or a refrigerator until relinquished into the custody of the laboratory or laboratory courier.

DOCUMENTATION CONVENTIONS

Each and every sample container has a label affixed to it. In most cases these labels are generated by our office personnel and are partially preprinted. Labels can also be hand written by our field personnel. The site is identified with the store number and site address, as is the particular groundwater well from which the sample is drawn (e.g. MW-1, MW-2, S-1 etc.). The time at which the sample was collected and the initials of the person collecting the sample are handwritten onto the label.

Chain of Custody records are created using client specific preprinted forms following USEPA specifications.

Bill of Lading records are contemporaneous records created in the field at the site where the non-hazardous purgewater is generated. Field Technicians use preprinted Bill of Lading forms.

DECONTAMINATION

All equipment is brought to the site in clean and serviceable condition and is cleaned after use in each well and before subsequent use in any other well. Equipment is decontaminated before leaving the site.

The primary decontamination device is a commercial steam cleaner. The steam cleaner is de-tuned to function as a hot pressure washer which is then operated with high quality deionized water which is produced at our facility and stored onboard our sampling vehicle. Cleaning is facilitated by the use of proprietary fixtures and devices included in the patented workstation that is incorporated in each sampling vehicle. The steam cleaner is used to decon reels, pumps

and bailers.

Any sensitive equipment or parts (i.e. Dissolved Oxygen sensor membrane, sounder etc.) that cannot be washed using the hot high pressure water, will be sprayed with a non-phosphate soap and deionized water solution and rinsed with deionized water.

EXAMPLE: The sounder is cleaned between wells using the non-phosphate soap and deionized water solution followed by deionized water rinses. The sounder is then washed with the steam cleaner between sites or as necessitated by use in a particularly contaminated well.

DISSOLVED OXYGEN READINGS

All Dissolved Oxygen readings are taken using YSI meters (e.g. YSI Model 550 meter). These meters are equipped with membrane probe that enables them to collect accurate in-situ readings.

The probe and reel is decontaminated between wells as described above. The meter is calibrated as per the instructions in the operating manual. The probe is lowered into the water column allowed to stabilize before use.

OXYIDATON REDUCTION POTENTIAL READINGS

All readings are obtained with either Corning or Myron-L meters (e.g. Corning ORP-65 or a Myron-L Ultrameter GP). The meter is cleaned between wells as described above. The meter is calibrated at the start of each day according to the instruction manual. In use the probe is placed in a cup of freshly obtained monitoring well water and allowed to stabilize.

Blaine Tech Services, Inc.
Standard Operating Procedure

LOW-FLOW SAMPLING

Rediflo2

1. Calibrate YSI Flow Cell as per manufacturer's specifications. Thoroughly rinse probe and cup between parameters. Calibration order as follows:

    A. pH (use 3-point calibration of 7, 4, 10)
    B. Oxygen Reduction Potential (ORP)
    C. Specific Conductance
    D. Dissolved Oxygen (DO) (calibrate simulating 100% oxygen saturation)

2. Thoroughly decontaminate pump and reel.
3. Remove dedicated PE tubing from the well or start with new PE tubing cut to the required length.
4. Attach the PE tubing to the Rediflo2 Pump.
5. Gently lower the Rediflo2 pump and PE tubing into the well, placing the Rediflo2 Pump intake at the center of the wetted screened interval. Take care to minimize disturbance to the water column.
6. Direct effluent line into YSI 556 Flow Cell.
7. Set Rediflo2 Pump speed at 100 - 500 ml/min.
8. Collect water quality parameter measurements for temperature, pH, conductivity, turbidity, DO and ORP every 3-5 minutes.
9. Monitor drawdown during purging with electronic water level meter. Record water level with each parameter measurement. MAXIMUM DRAWDOWN IS 0.33 FEET.
10. Collect parameter measurements until stability is achieved. Stability is defined as three consecutive measurements where:

Temp	± 1° Celsius
pH	± 0.1
Conductivity	± 3%
Turbidity	± 10% NTU
DO	± 0.3 mg/l
ORP	± 10 Mv

11. Disconnect effluent line from YSI 556 Flow Cell.
12. Sample through effluent line while maintaining constant flow rate.
13. Remove Rediflo2 Pump and PE tubing from well.
14. Detach and reinstall dedicated PE tubing in well.

Blaine Tech Services, Inc.
Standard Operating Procedure

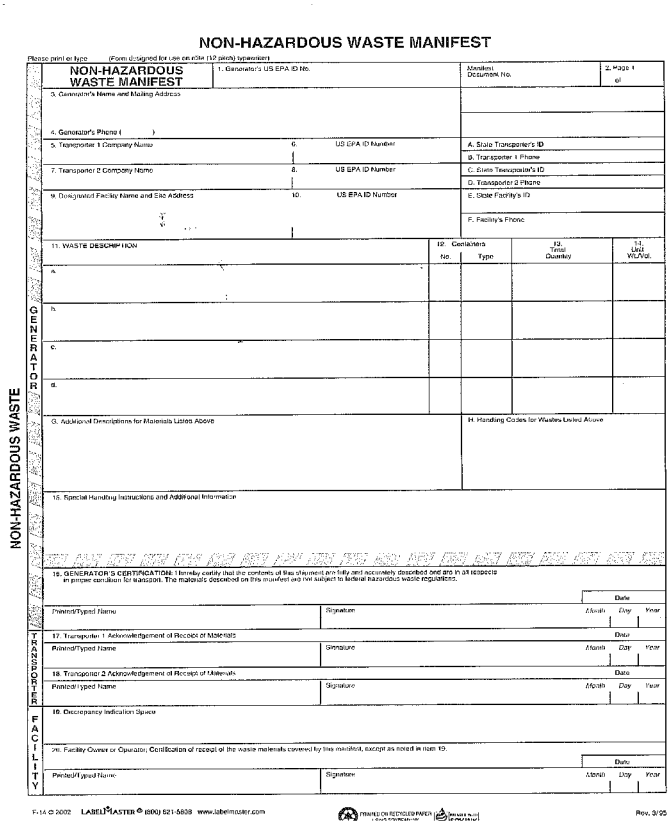
Purge Water Handling Procedure

Purpose

Control of non-hazardous purge water disposal. This procedure outlines the handling and disposing of non-hazardous purge water for the DELTA/COP portfolio.

Procedure

1) All purge and rinsate water will be contained in onboard truck tanks or trailers. Water may be commingled with other sites in the same portfolio of DELTA/COP sites.



2) A Non-Hazardous Waste manifest will be generated prior to leaving site.

3) All water will be offloaded into a commingled DELTA/COP tank at BLAINE facility.

4) Water will then be offloaded from the DELTA/COP tank and the BLAINE facility and transported to a disposal facility.

   For Southern California sites water will be disposed at Crosby and Overton in Wilmington, CA.
   For Northern California water will be disposed at Seaport Environmental in Redwood City, CA.

Example Manifest:

Validated Certified Laboratory Analytical Report—Groundwater Monitoring

Report Number : 90483
Date : 03/05/2015

Laboratory Results

Nadine Periat
Antea Group
1155 North 1st Street, Suite 201
San Jose, CA 95112

Subject : 20 Water Samples
Project Name : 256390
Project Number :

Dear Ms. Periat,

Chemical analysis of the samples referenced above has been completed. Summaries of the data are contained on the following pages. Sample(s) were received under documented chain-of-custody. US EPA protocols for sample storage and preservation were followed. Testing procedures comply with the TNI 2009 standards.
Laboratory results relate only to the samples tested. This report may be freely reproduced in full, but may only be reproduced in part with the express permission of Pace Analytical Services, Inc.
Pace Analytical Services, Inc. is certified by the State of California under the Environmental Laboratory Accreditation Program (ELAP), lab number 08263CA.
If you have any questions regarding procedures or results, please call me at 530-297-4800.

Sincerely,

Troy G. Turpen

Third Quarter 2017
Semi-Annual Monitoring Report

76 Service Station No. 6390
402 South Delaware Street, San Mateo, CA
San Mateo County Groundwater Protection Program LOP Case No. 110069

1.0 INTRODUCTION

Antea®Group has prepared this *Third Quarter 2017 Semi-Annual Monitoring Report* to document the groundwater monitoring and sampling event performed on August 4, 2017 for 76 Service Station No. 6390 at 402 South Delaware Street in San Mateo, California (**Figure 1**). A summary of the site location and history is presented as **Appendix A**. The site layout is depicted on **Figure 2**. Monitoring well and soil boring information is summarized in **Table 1.**

2.0 SECOND AND THIRD QUARTER 2017

2.1 Work Performed in the Second and Third Quarter 2017

1. Antea Group submitted the *First Quarter 2017 Semi-Annual Monitoring Report* on May 12, 2017.
2. Antea Group submitted a *Closure Request* on August 3, 2017.
3. Blaine Tech Services Inc. (Blaine Tech) performed the first quarter 2017 gauging and sampling event on August 4, 2017.

2.2 Work Proposed for the Fourth Quarter 2017 and First Quarter 2018

1. Antea Group will submit the *Third Quarter 2017 Semi-Annual Monitoring Report* (contained herein) to the San Mateo County Groundwater Protection Program (GPP).
2. Blaine Tech will perform the first quarter 2018 monitoring and sampling event pending case closure.

2.3 Current Project Status

Table A: Project Summary

Current phase of project:	Semi-annual and annual groundwater monitoring / No active remediation
Monitoring well gauging schedule:	Semi-annual (1st & 3rd Quarters): MW-6, MW-10R, MW-18, MW-21, MW-22, MW-25 Annual (1st Quarter): MW-4, MW-7, MW-8, MW-9, MW-12B, MW-13B, MW-14B, MW-15B, MW-17B, MW-19, MW-20, MW-23, MW-24
Monitoring well sampling schedule:	Semi-annual (1st & 3rd quarters): MW-6, MW-10R, MW-18, MW-21, MW-22, MW-25 Annual (1st Quarter only) MW-4, MW-7, MW-8, MW-9, MW-12B, ME-13B, MW-14B, MW-15B, MW-17B, MW-19, MW-20, MW-23, MW-24
Local receptors:	Four Irrigation wells 1,000 feet – the closest wells are approximately 675 feet NE and 775 feet NNW of the site

2.4 Regulatory Correspondence

In a letter dated August 21, 2017, available on GeoTracker, the GPP denied the case closure request due to procedures mentioned in the *First Quarter 2017 Semi-Annual Monitoring Report*. The GPP indicated in the letter that a peristaltic pump

is not suitable for collecting groundwater samples for analysis of Volatile Organic Compounds (VOCs). However, the California State Water Resources Control Board (SWRCB) *Leaking Underground Fuel Tank Guidance Manual September 2012 (Revised December 2015)* includes the peristaltic pump in a list of acceptable sample collection equipment.

The GPP also indicated a letter should be issued if there is a disagreement of the direction of the work. Blaine Tech collected the third quarter 2017 samples, on August 4, 2017, prior to the August 21, 2017 letter from the GPP, using an electric submersible with new, disposable polyethylene (PE) tubing for each sampled well in accordance with their Standard Operating Procedures for low-flow sampling provided as **Appendix B** prior to receiving the letter from the GPP. Antea Group validated the data collected during the third quarter 2017 monitoring event. For future sampling, Antea Group has adjusted the scope to use a bladder pump instead of a peristaltic pump and will schedule Blaine Tech to sample in first quarter 2018.

2.5 Groundwater Monitoring

During the third quarter 2017 monitoring and sampling event, Blaine tech gauged 19 wells and sampled 6 wells per their standard protocol (**Appendix B**) and the semi-annual sampling schedule**.** Copies of Blaine Tech's field data sheets are included as **Appendix C.** The table below summarizes the recent gauging and sampling event.

Table B: Summary of Monitoring and Sampling Events

Well gauging and sampling dates:	August 4, 2017
Wells gauged:	MW-4, MW-6, MW-7, MW-8, MW-9, MW-10R, MW-12B, MW-13B, MW-14B, MW-15B, MW-17B, MW-18, MW-19, MW-20, MW-21, MW-22, MW-23, MW-24, MW-25
Wells sampled:	MW-6, MW-10R, MW-18, MW-21, MW-22, MW-25
Purge method:	Low-flow methods via bladder pump
Sample collection method:	Bladder Pump with disposable tubing
Groundwater parameters measured (**Appendix C**):	Temperature, pH, Conductivity, Turbidity, and Dissolved Oxygen (DO)
Wells with measurable LNAPL:	None

LNAPL – Light non aqueous phase liquid

2.5.1 Groundwater Flow Gradient and Directional Trends

Groundwater flow direction during the third quarter 2017 was variable, but generally to the east at a gradient of approximately 0.003 foot per foot (ft/ft). A groundwater elevation contour map based on data collected during the third quarter 2017 monitoring event is depicted on **Figure 3**.

2.5.2 Groundwater Quality Data

Blaine Tech submitted the groundwater samples collected during the third quarter 2017 under chain of custody protocol to California Environmental Laboratory Accreditation Program (ELAP) certified (Certification No. 2944) Eurofins CalScience, Inc. (Calscience). Antea Group requested the following analyses:

- Gasoline Range Organics (carbon range C_6-C_{12}) by Environmental Protection Agency (EPA) Test Method 8260B;
- Benzene, Toluene, Ethylbenzene, and Xylenes (BTEX) by EPA Test Method 8260B;

- Fuel oxygenates and lead scavengers: methyl tertiary butyl ether (MTBE), tertiary butyl ether (TBA), diisopropyl ether (DIPE), ethyl tertiary butyl ether (ETBE), tertiary amyl methyl ether (TAME), ethanol, ethylene dibromide (EDB), and 1,2-dichloroethane (1,2-DCA) by EPA Test Method 8260B, and;
- Naphthalene by EPA Test Method 8260B.

Groundwater analytical results are presented in **Table 2** (current) and **Table 3** (historical). Laboratory analytical reports are included in **Appendix D**.

2.5.3 Groundwater Contaminant Trends

Using third quarter 2017 groundwater analytical results for selected wells, Antea Group contoured the estimated extents of dissolved phase GRO, benzene, and MTBE on **Figures 4, 5, and 6**, respectively. The dissolved phase plumes generally center near wells MW-6, MW-10R, and MW-18, and concentrations reported for the third quarter 2017 samples are consistent with historical data. No analytes of concern have been reported in samples collected from monitoring well MW-25, which has been historically downgradient of MW-21.

Time-series graphs depicting groundwater elevations, GRO, benzene, and MTBE concentrations over time for wells MW-6, MW-10R, MW-18, MW-21, and MW-22 are presented as **Appendix E**. Overall, contaminant concentrations appear to be relatively stable or have a non-discernable trend in the selected wells.

2.5.4 Waste Disposal Summary

Blaine Tech generated wastewater during the August 4, 2017 event through well purging/sampling and equipment cleaning. Blaine Tech transported the wastewater to their bulk facility in San Jose, California, and after the batching process, they will transport the wastewater to Seaport Environmental in Redwood City, California for disposal. The waste manifest was not available at the time of report submittal; however, they will be included in a future report.

2.5.5 Quality Assurance / Quality Control (QA/QC)

Antea Group's QA/QC measures included a detailed QA/QC data validation check of the Calscience results. Antea Group's data validation forms are included in **Appendix D**. A summary of the QA/QC is provided in the table below:

Table C: QA/QC Summary Third Quarter 2017

August 4, 2017 sampling event	
Laboratory QA/QC Performed:	Yes (validated by Antea Group)
Laboratory Data Qualifiers:	Yes
Are the data valid for their intended purpose?	Yes, the data are valid

Based on a review of the laboratory analytical report, including their QA/QC procedures and those implemented by Antea Group, we conclude that the laboratory data obtained during the third quarter 2017 groundwater sampling event is valid and usable for its intended purpose.

3.0 SUMMARY

Based on the third quarter 2017, groundwater data, Antea Group concludes the following:

- The highest dissolved-phase petroleum hydrocarbon concentrations were generally reported in MW-6, MW-10R, and MW-18 adjacent to, and historically downgradient from the underground storage tanks (USTs).
- The contaminant plumes are well delineated.
- Petroleum hydrocarbon concentrations are generally stable or show no discernible trend.

Data from the third quarter 2017 monitoring and sampling event continue to support a case for closure under the Low Threat Closure Policy. Per the August 21, 2017 letter from the GPP, Antea Group will amend the existing groundwater monitoring program to gauge and sample all monitoring wells using a submersible electric pump or bladder pump for the first quarter 2018 monitoring event.

4.0 REMARKS

The findings contained in this report represent Antea Group's professional opinions based upon the currently available information and are arrived at in accordance with currently acceptable professional standards. For any reports cited that were not generated by Antea USA, Inc., the data from those reports are used "as is" and is assumed to be accurate. Antea USA, Inc does not guarantee the accuracy of this data for the referenced work performed nor the inferences or conclusions stated in these reports. This report is based upon a specific scope of work requested by the client. The Contract between Antea Group and its client outlines the scope of work, and only those tasks specifically authorized by that contract or outlined in this report were performed. This report is intended only for the use of Antea Group's Client and anyone else specifically listed on this report. Antea Group will not and cannot be liable for unauthorized reliance by any other third party. Other than as contained in this paragraph, Antea Group makes no express or implied warranty as to the contents of this report.

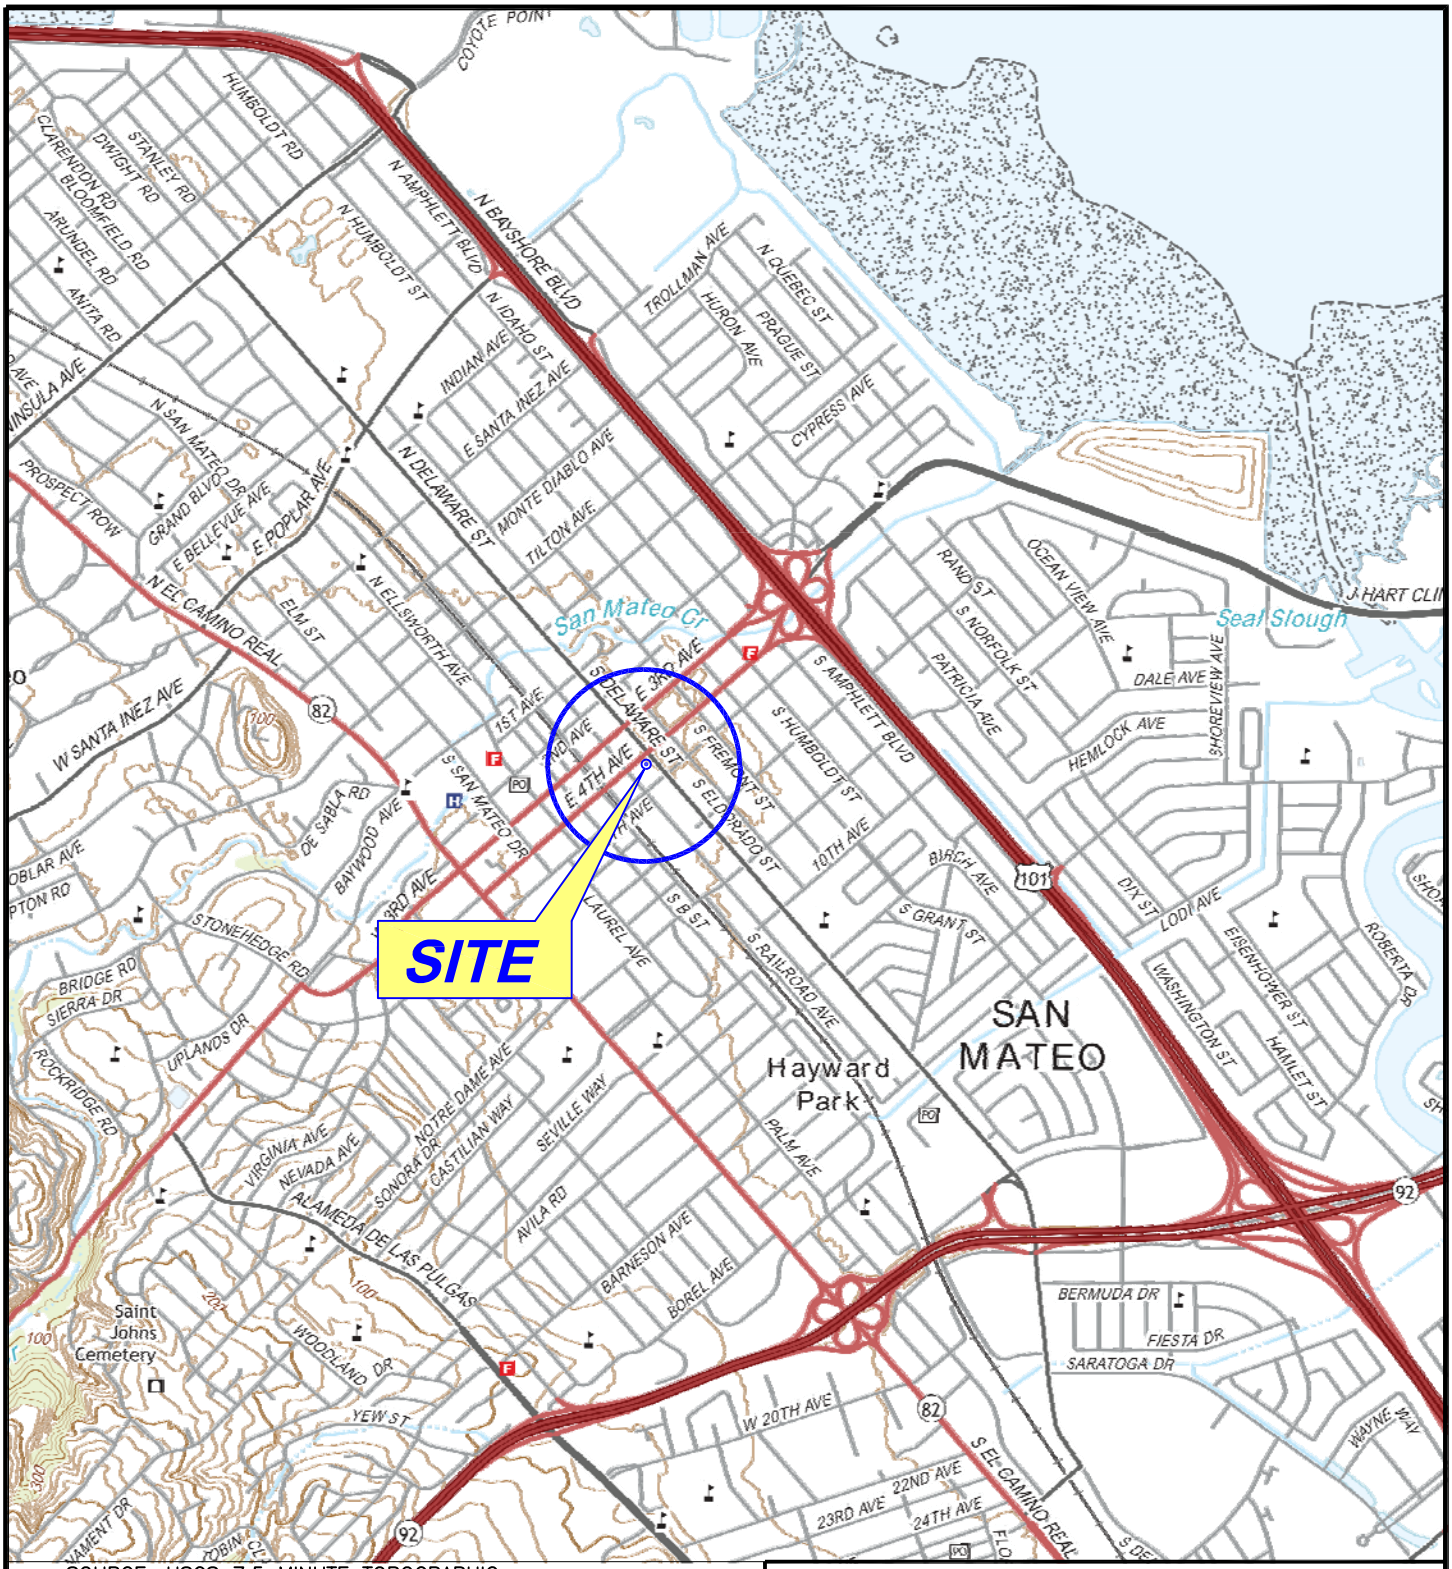
♦	The elevations were surveyed relative to mean sea level, per the City of San Mateo Benchmark #33-2 (elevation = 17.65 feet amsl)
†	TOC elevations were surveyed by Morrow Surveying on August 13, 2005 to the NAVD 88 datum by GPS observations.
††	TOC elevations were surveyed by Morrow Surveying on January 16, 2007 to the NAVD 88 datum by GPS observations.
†††	TOC elevations were surveyed by Mid Coast Engineers on August 18, 2008 to the NAVD 88 datum by GPS observations.
††††	TOC elevation was surveyed by Mid Coast Engineers on June 6, 2011 to the NAVD 88 datum by GPS observations.
†††††	TOC elevation was surveyed by Mid Coast Engineers on May 25, 2012 to the NAVD 88 datum by GPS observations.
†††††††	TOC elevation was surveyed by Morrow Surveying on May 16, 2013 to the NAVD 88 datum by GPS observations.
†††††††	TOC elevation was surveyed by Morrow Surveying on July 1, 2013 to the NAVD 88 datum by GPS observations.
††††††††	TOC elevation was surveyed by Morrow Surveying on February 6, 2015 to the NAVD 88 datum by GPS observations.

1	Analyzed by EPA Method 5030/8015M between 6/15/94 and 8/10/99, on 8/9/00, on 11/8/00, and between 2/13/02 and 2/18/03; by DHS LUFT between 11/9/99 and 5/18/00; on 2/14/01, and on 8/15/01; by EPA Method 8260B between 8/21/03 and the present.
2	Analyzed by EPA Method 5030/8020 between 6/15/94 and 8/10/99, on 8/9/00, and on 11/8/00; by DHS LUFT between 11/9/99 and 5/18/00, and on 2/14/01; by EPA Method 8021B between 2/13/02 and 2/18/03; by EPA Method 8260B between 8/21/03 and the present.
3	Analyzed by EPA Method 8020M between 3/8/96 and 8/10/99, on 8/9/00, and on 11/8/00; by DHS LUFT between 11/9/99 and 5/18/00, and on 2/14/01; by EPA Method 8021B between 2/13/02 and 2/18/03; by EPA Method 8260B between 8/21/03 and the present.
4	Analyzed by EPA Method 8260B.
5	Analyzed by EPA Method 8270C.

a	The presence of MTBE was potentially identified at reportable levels.
b	The presence of MTBE was identified at a level equal to or above the taste and odor threshold of 40 µg/L.
c	The hydrocarbons detected appeared to be gasoline and a non-gasoline mixture.
d	Chromatograph pattern: unidentified hydrocarbons C6-C12
e	Chromatograph pattern: weathered gasoline: C6-C12
f	Chromatograph pattern: discrete peaks C8-C12
g	Chromatograph pattern: discrete peaks
h	Sample was additionally run under EPA Method 8260B. MTBE was detected at 1,140 µg/L. All other analytes were non-detect.
i	Single analyte peak(s) were present in the requested fuel quantitation range. Fuel hydrocarbon pattern was not present.
j	The concentration reported reflect(s) individual or discrete unidentified peaks not matching a typical fuel pattern.
k	Reporting limits (PQL or MDL) were raised due to the high level of analyte present in the sample ("D4")
l	Detection limit raised due to sample dilution
m	Estimated value
n	Chromatogram not typical of gasoline.
o	The BC laboratory report indicated that reported concentration of 200 µg/L TPPH was due only to the presence of 90 µg/L PCE, 15 µg/L trichloroethane, and 9.8 µg/L cis-1,2-DCA; therefore, SECOR has represented the results for TPPH in this laboratory report as non-detect.
p	TPPH was positive due to PCE present in the sample.
q	PCE, TCE, and/or 1,2-DCE were subtracted from the gasoline range TPPH, or GRO.
r	Sample hold time was exceeded.
s	Not enough sample to re-run for PCE.
t	First run did not pass, sample had to be diluted due to not enough sample. Only one voa submitted to lab.
u	Depth to GW was collected on 9/28/2007 and sample was collected on 8/30/2007
v	Sample also analyzed for TPH-diesel (reported at a concentration of 28,000, with the chromatogram reporting a diesel and non-diesel mixture (<C16, >C22)
w	Result was positive due to PCE and TCE present in the sample.
x	Data from re-sampling event on 3/30/2010.
y	"L2" = Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results for this analyte in associated samples may be biased low.
z	"M0" = Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory reporting limits.
aa	"T4" = Result reported for hydrocarbons within the method-specific range that do not match pattern of laboratory standard.
bb	"1n" = The GRO result for this sample did not match the pattern of the laboratory standard for gasoline, likely due to the presence of PCE in the sample
cc	Primary compounds not found in typical gasoline
dd	"M1" = The matrix spike exceeded the laboratory's QC limits. The batch was accepted based on acceptable recovery from the laboratory control sample.
ee	samples also tested for full VOCs, refer to laboratory analytical report for full list of analytes and results.

TABLE 3
HISTORICAL GROUNDWATER GAUGING AND ANALYTICAL DATA
76 SERVICE STATION NO. 6390
402 SOUTH DELAWARE STREET
SAN MATEO, CALIFORNIA



Sample ID	As - Built Screen Interval (ft below TOC)	TOC Elevation (feet)	Date Sampled	Depth to GW (ft below TOC)	GWE (feet)	GWE Change (feet)	NAPL Thickness (feet)	Sheen	GRO [1] (µg/L)	BTEX [2]				MTBE [3] (µg/L)	TBA [4] (µg/L)	TAME [4] (µg/L)	1,2-DCA [4] (µg/L)	DIPE [4] (µg/L)	ETBE [4] (µg/L)	Ethanol [4] (µg/L)	EDB [4] (µg/L)	Naphthalene [5] (µg/L)
										Benzene (µg/L)	Toluene (µg/L)	Ethylbenzene (µg/L)	Xylenes (µg/L)									

ff Sample also analyzed for organic lead (result was 'non-detect')
gg Groundwater sample collected may represent casing water trapped in the well bottom.
S5 Surrogate recovery was outside control limits due to matrix interferences (not confirmed by re-analysis).
hh The method reporting limit for ethanol has been increased due to the presence of an interfering compound.
ii Repeat analysis of GRO yielded inconsistent results. The concentrations appear to vary between the bottles. The highest valid result is reported.
jj Repeat analysis for TBA yielded inconsistent results. The concentrations appear to vary between the bottles. The highest valid result is reported.
kk original GRO testing indicated that the primary compounds were not found in typical gasoline. These values were recalculated under the 'Gasoline Hydrocarbon' parameter, calculated by adding up the chromatographic peaks between hexane and dodecan (C6 to C12), subtracting the non-gasoline compounds (primarily dichloroethene, Trichloroethene, and tetrachloroethene), and comparing against a gasoline calibration curve.

Analytical data prepared by Sequoia Analytical between 6/15/94 and 2/18/04; by Severn Trent Laboratories between 8/21/03 and 3/01/06; by BC Laboratories between 8/02/06 and 7/30/09, and by Pace Analytical / Kiff Analytical between 1/18/10 and the present.

Appendix A

Summary of Previous Environmental Investigations

A-1 REGULATORY INTERACTION CHRONOLOGY

June 1992, An Accident/Incident Investigation Report was prepared detailing the June 3, 1992 failed routine leak test results. An inspection of the underground storage tank (UST) used to store super unleaded gasoline revealed the presence of a 14-inch crack in the sidewall of the UST (UNOCAL, 1992).

On September 10, 1992, KEI submitted an Underground Storage Tank Unauthorized Release (Leak)/Contamination Site Report (KEI, 1992b).

June 2009, In response to a September 8, 2008 assessment and sensitive receptor report, the San Mateo County Groundwater Protection Program (GPP) issued a letter dated June 25, 2009 requesting a work plan to assess the origin of the Tetrachloroethene (PCE) in water samples from monitoring wells MW-12B and MW-13B and soil samples collected during the 1992 UST replacement activities. The GPP also indicates that the inhalation risk associated with the PCE appears to be warranted.

July 2009, the GPP issued a letter dated July 27, 2009 discussing the State Water Resources Control Board (SWRCB) Resolution 2009-042 requiring the reduction in the frequency of groundwater monitoring.

August 2010, the GPP issued a letter dated August 9, 2010 responding to the submission of an assessment work plan dated December 31, 2009. The GPP asserted that the work plan did not provide a scope of work that adequately assessed the origin of the PCE.

November 2010, the GPP issued a letter dated November 22, 2010 indicating the future correspondences will be directed to Chevron Corporation and ConocoPhillips will receive a courtesy copy.

February 2011, the GPP issued a letter dated February 8, 2011 responding to Antea Group's intention not to include the analysis of PCE during future monitoring events. The GPP confirmed that PCE should be included in the ongoing monitoring program. The letter also provides comments on an October 29, 2010 assessment work plan that stated, "It has not been established the PCE originated from the 76 station". The letter further stated "the 0.0064 mg/kg PCE concentration reported in soil Sample WO-1 at 8 fbg does not demonstrate the former waste oil UST leaked PCE" and that the soil sample was "within the reported interval of groundwater fluctuation; there, it is possible the PCE in this sample originated from the PCE-affected groundwater migrating from an upgradient source".

November 2011, the GPP issued a letter dated November 22, 2011 responding to an assessment report dated August 10, 2011 and an "unsolicited" work plan dated August 9, 2011. In the letter, the GPP confirmed that the "results of the investigation indicate a PCE source exists upgradient of the site. However, we cannot establish

whether the former waste oil UST at the Unocal site contributed to the PCE plume". The letter further indicates, "We cannot establish if the first groundwater in SB-1, SB-3, and SB-4 contains greater PCE concentrations which may eliminate Unocal as a potential PCE source". As it relates to the completion of the vertical assessment, the letter states, "It appears the vertical extent of gasoline-affected soil and fuel impact to deeper groundwater has been adequately assessed"; however "the lateral extent of fuel hydrocarbons in first groundwater has not been assessed east of southeast of MW-6 and SB-7". The letter further indicates, "Remediation may not be necessary if the gasoline release is the only driver for the Unocal site and the fuel impact does not contain NAPL, is limited to under the street, is stable, does not pose a significant risk to hum health and environment, and will degrade to RWQCB water quality objectives within a reasonable time".

January 2013, the GPP issued a letter dated January 29, 2013 responding to an assessment report dated July 6, 2012 and an assessment work plan dated September 7, 2012. The GPP stated, "It appears activities at the subject site have contributed to the neighborhood PCE plume in concentrations exceeding water quality objectives". The GPP also requested that the scope of work in the assessment work plan include sub-slab vapor probes in the building at 521 and 603 East 5th Avenue instead of the proposed subsurface vapor wells.

January 2014, the GPP issued a letter dated January 8, 2014 responding to an assessment report dated July 17, 2013 and an "unsolicited" assessment work plan dated October 12, 2013. The GPP stated, "We consider the source of the PCE problematic and do not concur with conclusion in the report that the PCE solely originated from an upgradient source. Although the PCE in the MW-23 groundwater sample indicates some of the PCE likely originated from an upgradient source and the soil sampling results from MW-22 do not support a PCE release from the waste oil tank, the PCE concentrations nevertheless increase at the subject site (e.g. were <12 ug/l in the May 2011 grab groundwater samples from upgradient Borings SB-3 and SB-4) and the only vadose zone soil sample reported to contain PCE was collected from the waste oil tank excavation. GPP staff will postpone a decision on further PCE corrective action pending our review of the upcoming subsurface vapor sampling report". The assessment work scope of work that included the installation of two off-site monitoring wells down gradient of existing monitoring well MW-21 was not approved.

October 2014, the GPP issued a letter dated October 29, 2014 responding to a subsurface vapor report dated May 29, 2014 and a PCE source evaluation report dated October 8, 2014. The GPP concluded from the PCE source assessment report, "it appears more likely the PCE contamination originated from Wardrobe Cleaners. Therefore, at this time, GPP staff will not require the responsible party for the fuel release at the subject site to perform additional investigation of the PCE release". The GPP concluded from subsurface vapor report that "the GPP staff concur the PCE concentrations reported in sub-slab vapor samples SS-1 and SS-2 indicate a potential PCE inhalation risk to the occupants of the building at 521 East 5th Avenue. Additional corrective action will be necessary to address this issue. However, as previously stated, we will not at this time require the responsible party for the fuel release at the subject site to perform this work". The letter further stated, "The

report recommends removing the sub-slab vapor probes. We cannot approve this request at this time because of the required additional sampling. Please note, even when subsurface vapor sampling for gasoline compounds is no longer necessary, it may be prudent to leave the probes in-place and transfer their ownership to the property owner and eventually the responsible party for assessment of the PCE impact."

October 2014, the GPP issued a letter dated October 30, 2014 to representatives of Wardrobe Cleaners located at 335 4th Avenue, San Mateo. The letter stated that "The company investigating this release (AnteaGroup) has collected sufficient information to indicate the source of the Tetrachloroethene (PCE) they discovered in their soil and groundwater samples may have originated from Wardrobe Cleaners" and concluded that "GPP staff are requesting you to voluntarily sample soil and groundwater in the vicinity of Wardrobe Cleaners to determine if the cleaners released PCE to soil and groundwater".

July 2016, the GPP issued letters dated July 26, 2016 to representatives of the following businesses:

- Family Cleaners located at 412 East 3rd Avenue
- New A-1 Cleaners located at 17 E. 4th Avenue
- Former Quality Cleaners located at 508 East 3rd Avenue

The letters stated, "The Company investigating this release (Antea Group) has collected sufficient information to indicate the source of the Tetrachloroethene (PCE) and breakdown products they discovered in soil and groundwater samples may have originated from a site located upgradient from them".

A-2 ENVIRONMENTAL REMEDIAL ACTION CHRONOLOGY

August 1992, Kaprealian Engineering, Inc. (KEI) observed the removal of two 12,000-gallon underground storage tanks (USTs) used to store fuel, one 550-gallon steel waste oil UST, and the associated product piping and dispensers. Upon removal, KEI observed a crack in the sidewall of the super unleaded gasoline tank, coincident with the location of a tank backfill monitoring well, and two 3/16-inch diameter holes in the waste oil tank. KEI observed obvious petroleum hydrocarbon contamination in the gasoline UST cavity including free product. The eastern side of the gasoline UST cavity was over-excavated to approximately 22 feet deep over an area approximately 30 feet by 27 feet to remove as much of the impacted soil as possible (approximately 660 cubic yards). In addition, approximately 5,800 gallons of subsurface water (observed at 21-feet bgs) and product were pumped from the gasoline UST cavity (KEI, 1992a). A subsequent report summarizing the stockpile sampling completed in preparation for transport and disposal indicated that 250 cubic yards of soil was transported to Mountain View Landfill and 650 cubic yards of soil was transported to Red Bluff, California for treatment and disposal, or a total of 800 cubic yards (KEI, 1992c). Based on 1.5 tons per cubic yard, an estimated total of soil transported to an off-site facility is 1,200 tons.

January 1996, GeoStrategies (GSI) observed the excavation and removal of a 150-gallon capacity oil/water separator (GSI, 1996). GSI collected a confirmation soil sample (OWS-S-4.5) from underneath the oil/water

separator at a depth of 4.5 feet bgs and submitted it for analysis. The available documentation does not indicate the amount of soil removed during the decommissioning activities. The soil sample was analyzed for total petroleum as gasoline (TPHg) and volatile organic compounds benzene, toluene, ethylbenzene, and xylenes (BTEX) by Environmental Protection Agency (EPA) methods 8015/8020, total petroleum hydrocarbons as diesel (TPHd) by EPA Method 8015/3550, oil and grease (O&G) by Standard Method 5520 D/E&F, and chlorinated volatile organic compounds (cVOCs) by EPA Method 8010. The metals cadmium, chromium, nickel, lead, and zinc were analyzed by EPA Method 6010/200.7. The results from the analytical laboratory were as follows:

- TPHg – Not detected in concentrations above laboratory reporting limits.
- BTEX – benzene and Ethylbenzene were not detected in concentrations above laboratory reporting limits; toluene and xylenes were detected at 0.006 milligrams per kilogram (mg/kg) and 0.009 mg/kg, respectively.
- TPHd – 1.5 mg/kg.
- O&G - Not detected in concentrations above laboratory reporting limits.
- CVOCs - Not detected in concentrations above laboratory reporting limits.
- Metals – cadmium was not detected in concentrations above laboratory reporting limits, while chromium, nickel, lead, and zinc were detected at 160 mg/kg, 99 mg/kg, 12 mg/kg, and 69 mg/kg, respectively.

A-3 ENVIRONMENTAL INVESTIGATIONS CHRONOLOGY

For a summary of boring/well completion information, please refer to **Table 1**.

KEI collected nine (9) soil samples (A1, A2, B1, B2, SW1, SW1(2.5), SW2, SW2(2.5), and SW-3) and one (1) subsurface water sample (W1) from the UST excavation. KEI also collected one (1) oil sample (WO1) from the bottom of the waste oil UST excavation, six (6) subsurface soil samples (P1, P2, P3, P4, P5, and P6) from the bottom of the product piping trenches, and three (3) subsurface soil samples from beneath the dispensers (D1, D2, and D3).

May 1994, KEI installed three monitoring wells (MW-1, MW-2, and MW-3) at the site (KEI, 1994).

March 1995, KEI installed two off-site monitoring wells MW-4 and MW-5 in the footprint of the sidewalk of South Delaware Street opposite the site (KEI, 1995).

February 1996, KEI supervised the advancement of three Geoprobe® borings (SP1, SP2, and SP4) to 13 feet bgs downgradient and collected subsurface water samples. The laboratory results from the subsurface water samples collected from locations SP-1 and SP-2 were below laboratory reporting limits; however at location SP4 total petroleum hydrocarbons as gasoline (TPHg), benzene, Ethylbenzene, and xylenes were detected at 450 micrograms per liter (µg/L), 71 µg/L, 6.7 µg/L, and 17 µg/L, respectively (KEI, 1996).

December 2006/January 2007, SECOR International, Inc. (SECOR) supervised the advancement of direct push borings SP-5 through SP-8, and the installation of soil vapor wells VP-1 through VP-3, soil vapor probe SUBSLAB (SECOR, 2007). In addition, SECOR also supervised the abandonment of four (4) existing monitoring wells MW-1 through MW-4 and MW-5 and the installation of four (4) monitoring wells MW-6 through MW-9. A summary of the construction of these monitoring wells is provided in **Table 1**. Thirty-four (34) subsurface soil samples were submitted for laboratory analysis collected from the borings converted into monitoring well the monitoring wells as well as borings SP-5 through SP-8. The laboratory results from the sub-slab vapor sample did not indicate concentrations of constituents of concern above laboratory reporting limits.

July/August 2008, Stantec Consulting Company (Stantec) supervised the installation of shallow monitoring wells MW-10 and MW-11 [screen interval between 5 to 15 feet below ground surface (bgs)], and deep monitoring wells MW-12B, MW-13B, MW-14B, and MW-15B (screen interval between 17 to 31 feet bgs. Stantec collected both soil and subsurface water samples from the new wells (Stantec, 2008). For a summary of well completion information, please refer to **Table 1**.

December 2009, Delta Consultants prepared an investigation work plan dated December 31, 2009 to assess the PCE contamination in groundwater beneath the site vicinity (Delta, 2009).

August 2010, the GPP issued a letter dated August 9, 2010 responding to the submission of the December 31, 2009 assessment work plan. The GPP asserted that the work plan did not provide a scope of work that adequately assessed the origin of the PCE.

October, 2010, Antea Group issued a work plan to the GPP entitled *Potential Tetrachloroethene (PCE) Source Evaluation Revised Work Plan* dated October 29, 2010.

February 2011, the GPP issued a letter dated February 8, 2011 responding to the submission of the October 29, 2010 assessment work plan. The GPP approved the portions of the scope of work outlined in the work plan.

May/June 2011, Antea Group (formerly Delta Consultants) supervised the installation of monitoring well MW-17B, and the advancement of six (6) soil borings SB-1 and SB-3 through SB-7 (Antea Group, 2011). For a summary of well completion information, please refer to **Table 1**.

April/May 2012, Antea Group supervised the installation of soil borings SB-8 and SB-9, temporary well TW-1, and monitoring wells MW-18 and MW-19. Antea Group also supervised the destruction and replacement of Monitoring Well MW-10 with Monitoring Well MW-10R (Antea Group, 2012).

March 2013, Antea Group supervised the installation of monitoring wells MW-20 and MW-21 for additional definition of the shallow groundwater plume. Antea Group also supervised the advancement of soil boring SB-11 and the destruction of monitoring well MW-11 (Antea Group, 2013).

June/July 2013, Antea Group supervised installation of monitoring wells MW-22 through MW-24 to assess potential contribution of PCE from the former waste oil UST (MW-22), to assess PCE concentrations upgradient of the site (MW-23), and to better define the extent of the dissolved phase plume (MW-24, installed adjacent to boring SB-11). Antea Group also supervised the advancement of soil boring SB-10 to assess onsite shallow soil conditions near the former fuel USTs (Antea Group, 2013).

August 2013 and January/February 2014, Antea Group installed and sampled off-site sub-slab soil vapor point locations SS-1 through SS-4 using Vapor Pin™ to assess soil vapor conditions beneath the residential and commercial properties adjacent to and down-gradient of the site (Antea Group, 2014). Antea Group collected vapor samples in August 2013 (warm season samples) and January/February 2014 (cold season samples).

October 2014, Antea Group issued a document entitled PCE Source Evaluation Report dated October 8, 2014. This report summarized the results from the various past assessment activities with the goal of ascertaining if the former on-site waste UST removed in 1992 was a potential source of the PCE detected in subsurface water samples collected on- and off-site. The report concluded that the source of the PCE was from an off-site source (Antea Group, 2014). Based on the October 29, 2014 GPP letter, the source of the PCE likely originated from the Wardrobe Cleaners who received formal notification in a GPP October 30, 2014 letter requesting action. This letter was follow-up by three additional GPP letters dated July 26, 2016 to Family Cleaners located at 412 East 3rd Avenue, New A-1 Cleaners located at 17 E. 4th Avenue, and Former Quality Cleaners located at 508 East 3rd Avenue.

January 2015, Antea Group supervised the installation of Monitoring Well MW-25 and collected additional vapor sampling from sub-slab points SS-2 and SS-3 Antea Group, 2015).

A-4 PAST SENSITIVE RECEPTOR EVALAUTIONS

In June 1996, Pacific Environmental Group, Inc. (PEG) reported the results of a water supply well survey. PEG reviewed California Department of Water Resources (DWR) records to identify active and inactive water supply wells within a ¼-mile radius of the site. Based on the information included in the PEG report, there was one irrigation (location "D") identified over 2,000 south of the site (PEG, 1996).

September 2008, Stantec completed a sensitive receptor survey (SRS) within a ½-mile radius of the site as part of the investigation. Stantec reviewed DWR files, contacted the City of San Mateo and the local water purveyor California Water Service Company (Cal Water), completed a parcel survey within a 500-foot radius of the site, and

performed a field canvas. Stantec identified three irrigation wells within ½-mile of the site. Stantec also identified one surface water body (San Mateo Creek) approximately 1,488 feet north of the site (Stantec, 2008).

Blaine Tech Services' Standard Operating Procedures

BLAINE TECH SERVICES, INC.
METHODS AND PROCEDURES
FOR THE ROUTINE MONITORING OF
GROUNDWATER WELLS

SAMPLING PROCEDURES OVERVIEW

SAFETY

All groundwater monitoring assignments performed for DELTA comply with safety guidelines, 29 CFR 1910.120 and SB-198 Injury and Illness Prevention Program (IIPP). All Field Technicians receive the full 40 hour 29CFR 1910.120 OSHA SARA HAZWOPER course, medical clearance and on-the-job training prior to commencing any work on any DELTA COP/ELT site.

INSPECTION AND GAUGING

Wells are inspected prior to evacuation and sampling. The condition of the wellhead is checked and noted according to a wellhead inspection checklist.

Standard measurements include the depth to water (DTW) and the total well depth (TD) obtained with industry standard electronic sounders which are graduated in increments of hundredths of a foot.

The water in each well is inspected for the presence of Immiscibles or sheen and when free product is suspected, it is confirmed using an electronic interface probe (e.g. MMC). No samples are collected from a well containing free product.

EVACUATION

Depth to water measurements are collected by our personnel prior to purging and minimum purge volumes are calculated anew for each well based on the height of the water column and the diameter of the well. Expected purge volumes are never less than three case volumes and are set at no less than four case volumes in some jurisdictions.
Well purging devices are selected on the basis of the well diameter and the total volume to be evacuated. In most cases the well will be purged using an electric submersible pump (i.e. Grundfos) suspended near (but not touching) the bottom of the well. Small volumes of purgewater are often removed by hand bailing with a disposable bailer.

PARAMETER STABILIZATION

Well purging completion standards include minimum purge volumes, but additionally require stabilization of specific groundwater parameters prior to sample collection. Typical groundwater parameters used to measure stability are electrical conductivity, pH, and temperature. Instrument readings are obtained at regular intervals during the evacuation process (no less

than once per case volume).

Stabilization standards for routine quarterly monitoring of fuel sites include the following: Temperature is considered to have stabilized when successive readings do not fluctuate more than +/- 1 degree Celsius. Electrical conductivity is considered stable when successive readings are within 10%. pH is considered to be stable when successive readings remain constant or vary no more than 0.2 of a pH unit.

DEWATERED WELLS

Normal evacuation removes no less than three case volumes of water from the well. However, less water may be removed in cases where the well dewaters and does not recharge.

Wells known to dewater are evacuated as early as possible during each site visit in order to allow for the greatest amount of recovering. Any well that does not recharge to 80% of its original volume will be sampled prior to the departure of our personnel from the site in order to eliminate the need of a return visit.

In jurisdictions where a certain percentage of recovery is included in the local completion standard, our personnel follow the regulatory expectation.

PURGEWATER CONTAINMENT

All non-hazardous purgewater evacuated from each groundwater monitoring well is captured and contained in on-board storage tanks on the Sampling Vehicle and/or special water hauling trailers. Effluent from the decontamination of reusable apparatus (sounders, electric pumps and hoses etc.), consisting of groundwater combined with deionized water and non-phosphate soap, is also captured and pumped into effluent tanks.

Non hazardous purgewater is transported under standard Bill of Lading or Non-Hazardous manifest to a Blaine Tech Services, Inc. facility before being transported to an approved disposal facility.

SAMPLE COLLECTION DEVICES

All samples are collected using disposable bailers.

SAMPLE CONTAINERS

Sample material is decanted directly from the sampling bailer into sample containers provided by the laboratory which will analyze the samples. The type of sample container, material of construction, method of closure and filling requirements are specific to the intended analysis. Chemicals needed to preserve the sample material are commonly placed inside the sample containers by the laboratory or glassware vendor prior to delivery of the bottle to our personnel. The laboratory sets the number of replicate containers.

TRIP BLANKS

Upon request, a Trip Blank is carried to each site and is kept inside the cooler for the duration of the sampling event. It is turned over to the laboratory for analysis with the samples from that site.

DUPLICATES

Upon request, one Duplicate sample is collected at each site. It is up to the Field Technician to choose the well at which the Duplicate is collected. Typically, a duplicate is collected from one of the most contaminated wells. The Duplicate sample is labeled DUP thus rendering the sample blind.

SAMPLE STORAGE

All sample containers are promptly placed in food grade ice chests for storage in the field and transport (direct or via our facility) to the analytical laboratory that will perform the intended analytical procedures. These ice chests contain quantities of restaurant grade ice as a refrigerant material. The samples are maintained in either an ice chest or a refrigerator until relinquished into the custody of the laboratory or laboratory courier.

DOCUMENTATION CONVENTIONS

Each and every sample container has a label affixed to it. In most cases these labels are generated by our office personnel and are partially preprinted. Labels can also be hand written by our field personnel. The site is identified with the store number and site address, as is the particular groundwater well from which the sample is drawn (e.g. MW-1, MW-2, S-1 etc.). The time at which the sample was collected and the initials of the person collecting the sample are handwritten onto the label.

Chain of Custody records are created using client specific preprinted forms following USEPA specifications.

Bill of Lading records are contemporaneous records created in the field at the site where the non-hazardous purgewater is generated. Field Technicians use preprinted Bill of Lading forms.

DECONTAMINATION

All equipment is brought to the site in clean and serviceable condition and is cleaned after use in each well and before subsequent use in any other well. Equipment is decontaminated before leaving the site.

The primary decontamination device is a commercial steam cleaner. The steam cleaner is de-tuned to function as a hot pressure washer which is then operated with high quality deionized water which is produced at our facility and stored onboard our sampling vehicle. Cleaning is facilitated by the use of proprietary fixtures and devices included in the patented workstation that is incorporated in each sampling vehicle. The steam cleaner is used to decon reels, pumps

and bailers.

Any sensitive equipment or parts (i.e. Dissolved Oxygen sensor membrane, sounder etc.) that cannot be washed using the hot high pressure water, will be sprayed with a non-phosphate soap and deionized water solution and rinsed with deionized water.

EXAMPLE: The sounder is cleaned between wells using the non-phosphate soap and deionized water solution followed by deionized water rinses. The sounder is then washed with the steam cleaner between sites or as necessitated by use in a particularly contaminated well.

DISSOLVED OXYGEN READINGS

All Dissolved Oxygen readings are taken using YSI meters (e.g. YSI Model 550 meter). These meters are equipped with membrane probe that enables them to collect accurate in-situ readings.

The probe and reel is decontaminated between wells as described above. The meter is calibrated as per the instructions in the operating manual. The probe is lowered into the water column allowed to stabilize before use.

OXYIDATON REDUCTION POTENTIAL READINGS

All readings are obtained with either Corning or Myron-L meters (e.g. Corning ORP-65 or a Myron-L Ultrameter GP). The meter is cleaned between wells as described above. The meter is calibrated at the start of each day according to the instruction manual. In use the probe is placed in a cup of freshly obtained monitoring well water and allowed to stabilize.

Blaine Tech Services, Inc.
Standard Operating Procedure

LOW-FLOW SAMPLING

Rediflo2

1. Calibrate YSI Flow Cell as per manufacturer's specifications. Thoroughly rinse probe and cup between parameters. Calibration order as follows:

    A. pH (use 3-point calibration of 7, 4, 10)
    B. Oxygen Reduction Potential (ORP)
    C. Specific Conductance
    D. Dissolved Oxygen (DO) (calibrate simulating 100% oxygen saturation)

2. Thoroughly decontaminate pump and reel.
3. Remove dedicated PE tubing from the well or start with new PE tubing cut to the required length.
4. Attach the PE tubing to the Rediflo2 Pump.
5. Gently lower the Rediflo2 pump and PE tubing into the well, placing the Rediflo2 Pump intake at the center of the wetted screened interval. Take care to minimize disturbance to the water column.
6. Direct effluent line into YSI 556 Flow Cell.
7. Set Rediflo2 Pump speed at 100 - 500 ml/min.
8. Collect water quality parameter measurements for temperature, pH, conductivity, turbidity, DO and ORP every 3-5 minutes.
9. Monitor drawdown during purging with electronic water level meter. Record water level with each parameter measurement. MAXIMUM DRAWDOWN IS 0.33 FEET.
10. Collect parameter measurements until stability is achieved. Stability is defined as three consecutive measurements where:

Temp	± 1° Celsius
pH	± 0.1
Conductivity	± 3%
Turbidity	± 10% NTU
DO	± 0.3 mg/l
ORP	± 10 Mv

11. Disconnect effluent line from YSI 556 Flow Cell.
12. Sample through effluent line while maintaining constant flow rate.
13. Remove Rediflo2 Pump and PE tubing from well.
14. Detach and reinstall dedicated PE tubing in well.

Blaine Tech Services, Inc.
Standard Operating Procedure

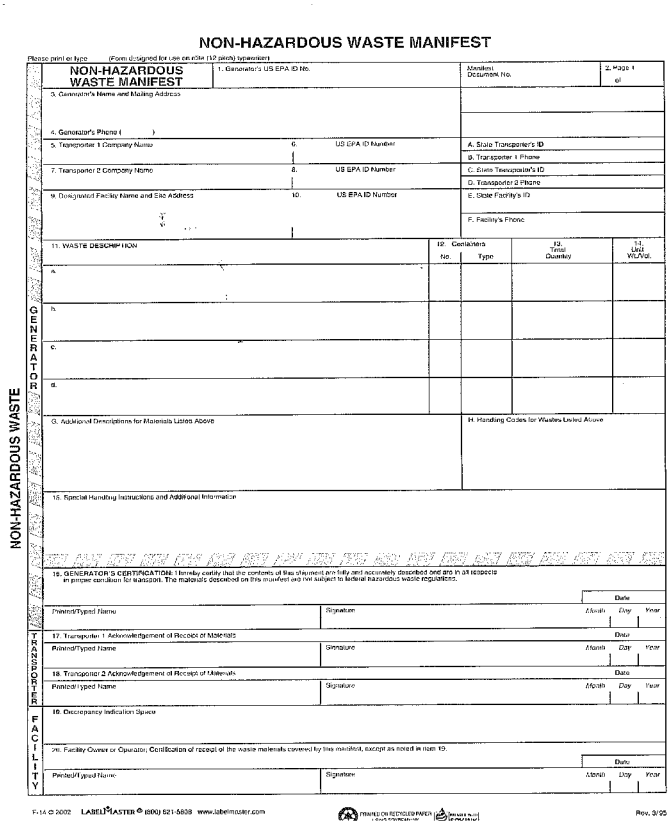
Purge Water Handling Procedure

Purpose

Control of non-hazardous purge water disposal. This procedure outlines the handling and disposing of non-hazardous purge water for the DELTA/COP portfolio.

Procedure

1) All purge and rinsate water will be contained in onboard truck tanks or trailers. Water may be commingled with other sites in the same portfolio of DELTA/COP sites.



2) A Non-Hazardous Waste manifest will be generated prior to leaving site.

3) All water will be offloaded into a commingled DELTA/COP tank at BLAINE facility.

4) Water will then be offloaded from the DELTA/COP tank and the BLAINE facility and transported to a disposal facility.

   For Southern California sites water will be disposed at Crosby and Overton in Wilmington, CA.
   For Northern California water will be disposed at Seaport Environmental in Redwood City, CA.

Example Manifest:

ANTEA COP/ELT BILL OF LADING

SOURCE RECORD **BILL OF LADING**
FOR NON-HAZARDOUS PURGEWATER RECOVERED FROM GROUNDWATER WELLS AT ANTEA COP/ELT FACILITIES IN THE STATE OF CALIFORNIA. THE NON-HAZARDOUS PURGE- WATER WHICH HAS BEEN RECOVERED FROM GROUND- WATER WELLS IS COLLECTED BY THE CONTRACTOR, MADE UP INTO LOADS OF APPROPRIATE SIZE AND HAULED BY BLAINE TECH SERVICES TO THEIR FACILITY IN SAN JOSE AND SACRAMENTO, CALIFORNIA.

The contractor performing this work is BLAINE TECH SERVICES, INC. (BTS), 20360 1680 Rogers Ave, San Jose (phone [310] 885-4455x103). Blaine Tech Services, Inc. is authorized by ANTEA COP/ELT to recover, collect, apportion into loads, and haul the Non-Hazardous Well Purgewater that is drawn from wells at the ANTEA COP/ELT facility indicated below and to deliver that purgewater to BTS. Transport routing of the Non-Hazardous Well Purgewater may be direct from one ANTEA COP/ELT facility to BTS; from one ANTEA COP/ELT facility to BTS via another ANTEA COP/ELT facility; or any combination thereof. The Non-Hazardous Well Purgewater is and remains the property of ANTEA COP/ELT..

This **Source Record BILL OF LADING** was initiated to cover the recovery of Non-Hazardous Well Purgewater from wells at the ANTEA COP/ELT facility described below:

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 17-08-0608 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 08/08/17. They were assigned to Work Order 17-08-0608.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Glossary of Terms and Qualifiers

Work Order: 17-08-0608 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

SUBJECT: UNOCAL 76 STATION #6390 AT 402 SOUTH DELAWARE STREET, SAN MATEO, CALIFORNIA

Dear Mr. Hunter:

AnteaGroup (Antea) uploaded to the State GeoTracker (GeoTracker) database a groundwater monitoring report dated May 12, 2017, and an unsolicited case closure request dated August 3, 2017. The following comments are based on San Mateo County Groundwater Protection Program (GPP) staff review of these reports and the project file.

Groundwater Monitoring Report

Item #4 in the GPP staff email dated August 25, 2016 (comments on May 2016 groundwater monitoring report) directed the registered professional to not use a peristaltic pump to collect future groundwater samples for the analysis of volatile organic compounds (VOCs) and reiterated this directive in Item #1 of our email dated March 13, 2017 (comments on November 2016 monitoring report). However, Section 2.4 of the May 2017 monitoring report indicates a peristaltic pump was again used to collect groundwater samples for VOC analysis (the First Quarter 2017 samples). The registered professional states the California LUFT manual supports using a peristaltic pump to collect groundwater samples for VOC analysis, and therefore, did not direct Blain Tech to re-sample the wells as we directed in our March 2017 email. GPP staff do not consider this the standard of care expected for the following reasons:

- The LUFT manual was an open-sourced (Wiki-type) document, not a document peer reviewed by the scientific research community. Moreover, all of the technical guidance documents we are aware of for groundwater sampling stipulate a peristaltic pump should not be used for the collection of groundwater samples for VOC analysis (e.g. USEPA Region 9 Field Sampling Document #1220; Appendix A of 2008 DTSC Guidance Manual for Groundwater Investigation). Even the reference cited in the LUFT Manual (Puls and Barcelona, 1996) states "a peristaltic pump can cause degassing resulting in alteration of pH, alkalinity and some volatile loss"; and

- GPP staff have previously informed CEMC representatives that if they disagree with a GPP staff directive, then they should promptly issue a letter demonstrating why the work we directed is not warranted. No such response was issued.

Given the foregoing, GPP staff consider the monitoring data collected during the first and third quarter of 2016 and the first quarter of 2017 as potentially unrepresentative. Our letter dated August 19, 2015, indicated the subject site may satisfy the State Low-Threat UST Case Closure Policy (LTCP) if the groundwater monitoring results over this period were similar to historical results. Unfortunately, we cannot accept the results reported over this period of time because the data are potentially unrepresentative (i.e. do not satisfy the data quality objectives). Therefore, the following work is required:

- **Immediately** gauge and sample the groundwater in all monitoring wells using a suitable sampling device; and

- Upload to GeoTracker by **November 21, 2017**, all electronic files required by California Code of Regulations Title 23, Division 3, Chapter 30, including a report detailing and justifying the methods, findings, conclusions, and recommendations of the investigation. Ensure the groundwater sampling results table is footnoted as previously required in our March 2017 email.

GPP staff cannot recommend the UST Cleanup Fund reimburse the costs associated with the May 2017 groundwater monitoring event because the work was not performed in accordance with our directives. Please note, we may require additional groundwater monitoring depending on the results of the above required work.

Unsolicited Case Closure Request

Item #2 in our email dated March 13, 2017, did not consider it necessary to prepare the case closure request recommended in the November 2016 monitoring report because GPP staff indicated case closure under the LTCP appeared appropriate. GPP staff were only waiting on the results of the additional groundwater monitoring events required on page 2 of our August 2015 letter (final impediment to case closure). Preparing a comprehensive case closure document evaluating all exposure pathways does not appear cost-effective when the agency was only waiting on these results. Therefore, **GPP staff cannot recommend the UST Cleanup Fund reimburse the costs associated with the preparation of the August 2017 closure request.**

With respect to the case closure request, GPP staff cannot support case closure at this time for the reasons stated at the top of this page (i.e. potentially unrepresentative verification groundwater samples). We will re-evaluate our decision when we review the groundwater monitoring report due by November 21, 2017. Please note, our decision to deny case closure is subject to appeal to the State Water Resources Control Board (SWRCB), pursuant to Section 25296.40(a)(1) of the Health and Safety Code (Thompson-Richter Underground Storage Tank Reform Act - Senate Bill 562). Please

contact the SWRCB Underground Storage Tank Program at (916) 341-5752 for information regarding the appeal process if you desire to appeal our decision.

Please contact me at (650) 372-6292 or at dmilano@smcgov.org if you have any questions.

Closure Request

Low-Threat Closure Request
76 Service Station No 6390
402 South Delaware Street, San Mateo, California
San Mateo County LOP Case No. 110069

1.0 INTRODUCTION

The purpose of this submittal is to document the status of the assessment and remediation efforts completed at the active gasoline service station site located at 402 South Delaware Street in San Mateo, California (the Site) with the goal of obtaining regulatory closure for San Mateo County Groundwater Protection Program (GPP) Case Number 110069. Please refer to **Figures 1** and **2A** for the location information. It is our goal to provide the GPP with sufficient information to support an argument for site closure. The following sections provide a summary of assessment and remedial activities completed at the Site. The information presented in **Sections 2.0** through **6.0** is used in **Section 7.0** to support the arguments for regulatory closure consistent with the 2012 California State Water Resources Control Board (SWRCB) *Low-Threat Underground Storage Tank Case Closure Policy, Resolution No. 2012-0016* (LTC Policy).

2.0 BACKGROUND INFORMATION

This section provides a site description, case background information, and regional and site-specific geology and hydrogeology.

2.1 Site Description

The Site is currently an active service station with a fuel dispensing system and a structure used for retail sales and automobile maintenance located on the southern corner at the intersection of East Fourth Avenue and South Delaware Street in the city and county of San Mateo, California (**Appendix A** - Assessor Parcel Number 034-186-110). The fueling infrastructure consists of two (2) double-walled steel-fiberglass clad underground storage tanks (USTs) with capacities of approximately 12,000 gallons each, one (1) double-walled steel-fiberglass clad waste oil UST with a capacity of approximately 520 gallons, three pump islands each with two dispensers, and associated underground double-walled product conveyance piping (**Figure 2B**). The USTs and associated conveyance piping was installed in 1992. Please refer to **Appendix B** for more details on the facility.

2.2 Past Fuel System Modifications

The following provides a summary of available information related to past fuel systems up-grades for the Site.

August 1992 - Kaprealian Engineering, Inc. (KEI) observed the removal of two 12,000-gallon capacity gasoline USTs, one 550-gallon capacity waste oil UST, dispensers from three product islands, and associated product conveyance piping (KEI, 1992a). Due to obvious petroleum hydrocarbon contamination in the UST cavities, KEI submitted an Underground Storage Tank Unauthorized Release (Leak)/Contamination Site Report On September 10, 1992 (KEI, 1992b). The removed fueling infrastructure was replaced with the facilities currently at the site.

January 1996 - GeoStrategies (GSI) observed the excavation and removal of a 150-gallon capacity oil/water separator during reconstruction of the station building (GSI, 1996).

2.3 Assessment and Remediation Chronology

The background information presented herein is based on documents previously submitted by Antea Group and past engineering consulting companies. Below is a summary of completed environmental activities related to GPP Case Number 110069. This includes a summary of past regulatory interactions, past remedial/removal actions, past assessment/investigations, and past sensitive receptor evaluations.

2.3.1 Regulatory Interaction Chronology

June 1992, An Accident/Incident Investigation Report was prepared detailing the June 3, 1992 failed routine leak test results. An inspection of the UST used to store super unleaded gasoline revealed the presence of a 14-inch crack in the sidewall of the UST (UNOCAL, 1992).

On September 10, 1992, KEI submitted an Underground Storage Tank Unauthorized Release (Leak)/Contamination Site Report (KEI, 1992b).

June 2009, in response to an assessment and sensitive receptor report dated September 8, 2008, the GPP issued a letter on June 25, 2009 directing a work plan be submitted for assessing the origin of the Tetrachloroethene (PCE) reported in water samples from wells MW-12B and MW-13B and in soil samples collected during the 1992 waste oil UST replacement. The GPP also indicates that the inhalation risk associated with the PCE appears warranted.

July 2009, the GPP issued a letter dated July 27, 2009 discussing the SWRCB Resolution 2009-042 requiring the reduction in the frequency of groundwater monitoring.

August 2010, the GPP issued a letter dated August 9, 2010 responding to the submission of an assessment work plan dated December 31, 2009. The GPP asserted that the work plan did not provide a scope of work that adequately assessed the origin of the PCE.

November 2010, the GPP issued a letter dated November 22, 2010 indicating future correspondence will be directed to Chevron Corporation and ConocoPhillips will receive a courtesy copy.

February 2011, the GPP issued a letter dated February 8, 2011 responding to Antea Group's intention not to include the analysis of PCE during future monitoring events. The GPP confirmed that PCE should be included in the ongoing monitoring program. The letter also provides comments on an October 29, 2010 assessment work plan that states, "it has not been established the PCE originated from the 76 station". The letter further states, "the 0.0064 mg/kg PCE concentration reported in soil Sample WO-1 at 8 fbg does not demonstrate the former waste oil UST leaked PCE" and that the soil sample was "within the reported interval of groundwater fluctuation; therefore, it is possible the PCE in this sample originated from the PCE-affected groundwater migrating from an upgradient source".

November 2011, the GPP issued a letter dated November 22, 2011 responding to an assessment report dated August 10, 2011 and an "unsolicited" work plan dated August 9, 2011. In the letter, the GPP confirmed that the "results of the investigation indicate a PCE source exists upgradient of the site. However, we cannot establish whether the former waste oil UST at the Unocal site contributed to the PCE plume". The letter further indicates, "we cannot establish if the first groundwater in SB-1, SB-3, and SB-4 contains greater PCE concentrations which may eliminate Unocal as a potential PCE source". As it relates to the completion of the vertical assessment, the letter states, "It appears the vertical extent of gasoline-affected soil and fuel impact to deeper groundwater has been adequately assessed", however "the lateral extent of fuel hydrocarbons in first groundwater has not been assessed east or southeast of MW-6 and SB-7". The letter further indicates, "Remediation may not be necessary if the gasoline release is the only driver for the Unocal site and the fuel impact does not contain NAPL, is limited to under the street, is stable, does not pose a significant risk to hum health and environment, and will degrade to RWQCB water quality objectives within a reasonable time".

January 2013, the GPP issued a letter dated January 29, 2013 responding to an assessment report dated July 6, 2012 and an assessment work plan dated September 7, 2012. The GPP stated, "It appears activities at the subject site have contributed to the neighborhood PCE plume in concentrations exceeding water quality objectives". The GPP also requested that the scope of work in the assessment work plan include sub-slab vapor probes in the building at 521 and 603 East 5th Avenue instead of the proposed subsurface vapor wells.

January 2014, the GPP issued a letter dated January 8, 2014 responding to an assessment report dated July 17, 2013 and an "unsolicited" assessment work plan dated October 12, 2013. The GPP stated, "We consider the source of the PCE problematic and do not concur with conclusion in the report that the PCE solely originated from an upgradient source. Although the PCE in the MW-23 groundwater sample indicates some of the PCE likely originated from an upgradient source and the soil sampling results from MW-22 do not support a PCE release from the waste oil tank, the PCE concentrations nevertheless increase at the subject site (e.g. were <12 µg/l in the May 2011 grab groundwater samples from upgradient Borings SB-3 and SB-4) and the only vadose zone soil sample reported to contain PCE was collected from the waste oil tank excavation. GPP staff will postpone a decision on further PCE corrective action pending our review of the upcoming subsurface vapor sampling report". The assessment scope of work that included the installation of two off-site monitoring wells downgradient of existing monitoring well MW-21 was not approved.

October 2014, the GPP issued a letter dated October 29, 2014 responding to a subsurface vapor report dated May 29, 2014 and a PCE source evaluation report dated October 8, 2014. The GPP concluded from the PCE source assessment report "it appears more likely the PCE contamination originated from Wardrobe Cleaners. Therefore, at this time, GPP staff will not require the responsible party for the fuel release at the subject site to perform additional investigation of the PCE release". The GPP concluded from subsurface vapor report that "the GPP staff concur the PCE concentrations reported

in sub-slab vapor samples SS-1 and SS-2 indicate a potential PCE inhalation risk to the occupants of the building at 521 East 5th Avenue. Additional corrective action will be necessary to address this issue. However, as previously stated, we will not at this time require the responsible party for the fuel release at the subject site to perform this work". The letter further stated, "The report recommends removing the sub-slab vapor probes. We cannot approve this request at this time because of the required additional sampling. Please note, even when subsurface vapor sampling for gasoline compounds is no longer necessary, it may be prudent to leave the probes in-place and transfer their ownership to the property owner and eventually the responsible party for assessment of the PCE impact."

October 2014, the GPP issued a letter dated October 30, 2014 to representatives of Wardrobe Cleaners located at 335 4th Avenue, San Mateo. The letter stated, "The company investigating this release (Antea Group) has collected sufficient information to indicate the source of the Tetrachloroethene (PCE) they discovered in their soil and groundwater samples may have originated from Wardrobe Cleaners" and concluded that "GPP staff are requesting you to voluntarily sample soil and groundwater in the vicinity of Wardrobe Cleaners to determine if the cleaners released PCE to soil and groundwater".

July 2016, the GPP issued letters dated July 26, 2016 to representatives of the following businesses:

- Family Cleaners located at 412 East 3rd Avenue
- New A-1 Cleaners located at 17 E. 4th Avenue
- Former Quality Cleaners located at 508 East 3rd Avenue

The letters stated, "The Company investigating this release (Antea Group) has collected sufficient information to indicate the source of the Tetrachloroethene (PCE) and breakdown products they discovered in soil and groundwater samples may have originated from a site located upgradient from them".

2.3.2 Environmental Investigations Chronology

August 1992, KEI observed the removal of two 12,000-gallon USTs used to store fuel, one 550-gallon steel waste oil UST, and the associated product piping and dispensers. Upon removal, KEI observed a crack in the sidewall of the super unleaded gasoline tank, coincident with the location of a tank backfill monitoring well, and two 3/16-inch diameter holes in the waste oil tank. KEI observed obvious petroleum hydrocarbon contamination in the gasoline UST cavity including free product. The eastern side of the gasoline UST cavity was over-excavated to approximately 22 feet deep over an area approximately 30 feet by 27 feet to remove as much of the impacted soil as possible (approximately 660 cubic yards). In addition, approximately 5,800 gallons of subsurface water (observed at a depth of approximately 21-feet) and product were pumped from the gasoline UST cavity (KEI, 1992a). A subsequent report summarizing the stockpile sampling completed in preparation for transport and disposal indicated that 250 cubic yards of soil was transported to Mountain View Landfill and 650 cubic yards of soil was transported to Red Bluff,

California for treatment and disposal, or a total of 800 cubic yards (KEI, 1992c). Based on 1.5 tons per cubic yard, an estimated total of soil transported to an off-site facility is 1,200 tons.

January 1996, GSI observed the excavation and removal of a 150-gallon capacity oil/water separator (GSI, 1996). GSI collected a confirmation soil sample (OWS-S-4.5) from underneath the oil/water separator at a depth of 4.5 feet below ground surface (bgs) and submitted it for analysis. The available documentation does not indicate the amount of soil removed during the decommissioning activities. The soil sample was analyzed for the following:

- Total petroleum hydrocarbons as gasoline (TPHg) and volatile organic compounds benzene, toluene, ethylbenzene, and xylenes (BTEX) by Environmental Protection Agency (EPA) methods 8015/8020,
- Total petroleum hydrocarbons as diesel (TPHd) by EPA Method 8015/3550,
- Oil and grease (O&G) by Standard Method 5520 D/E&F,
- Chlorinated volatile organic compounds (cVOCs) by EPA Method 8010, and
- Metals, cadmium, chromium, nickel, lead, and zinc by EPA Method 6010/200.7.

The results from the analytical laboratory were as follows:

- TPHg – Not detected in concentrations above laboratory reporting limits.
- BTEX – benzene and ethylbenzene were not detected in concentrations above laboratory reporting limits; toluene and xylenes were detected at 0.006 milligrams per kilogram (mg/kg) and 0.009 mg/kg, respectively.
- TPHd – 1.5 mg/kg.
- O&G - Not detected in concentrations above laboratory reporting limits.
- cVOCs - Not detected in concentrations above laboratory reporting limits.
- Metals – cadmium was not detected in concentrations above laboratory reporting limits, while chromium, nickel, lead, and zinc were detected at 160 mg/kg, 99 mg/kg, 12 mg/kg, and 69 mg/kg, respectively.

2.3.3 Environmental Remedial Action Chronology

For a summary of boring/well completion information, please refer to **Table 1** and **Appendix C**. For a summary of past subsurface water laboratory and gauging results, please refer to **Tables 2, 3, and 4**. For a summary of past subsurface soil and soil gas laboratory results, please refer to **Tables 5, 6, and 7.**

KEI collected nine (9) soil samples (A1, A2, B1, B2, SW1, SW1 (2.5), SW2, SW2 (2.5), and SW-3) and one (1) subsurface water sample (W1) from the UST excavation. KEI also collected one (1) sample (WO1) from the bottom of the waste oil UST excavation, six (6) subsurface soil samples (P1, P2, P3, P4, P5, and P6) from the bottom of the product piping trenches, and three (3) subsurface soil samples from beneath the dispensers (D1, D2, and D3). Please refer to **Tables 2, 5, and 6** and **Figures 2A and 2B** for laboratory results and location of the samples.

May 1994, KEI installed three monitoring wells (MW-1, MW-2, and MW-3) at the site (KEI, 1994). Please refer to **Tables 2, 5, and 6** for past laboratory results from subsurface water and soil samples, and **Figures 2A and 2B** for the locations.

March 1995, KEI installed two off-site monitoring wells MW-4 and MW-5 in the footprint of the sidewalk of South Delaware Street opposite the site (KEI, 1995). Please refer to **Tables 2, 5, and 6** for past laboratory results from subsurface water and soil samples, and **Figures 2A and 2B** for the locations.

February 1996, KEI supervised the advancement of three Geoprobe® borings (SP1, SP2, and SP4) to 13 feet bgs downgradient and collected subsurface water samples. Please refer to **Figure 2A** for the locations of the borings. The laboratory results from the subsurface water samples collected from locations SP-1 and SP-2 were below laboratory reporting limits; however at location SP4 TPHg, benzene, ethylbenzene, and xylenes were detected at 450 micrograms per liter (µg/L), 71 µg/L, 6.7 µg/L, and 17 µg/L, respectively (KEI, 1996).

December 2006/January 2007, SECOR International, Inc. (SECOR) supervised the advancement of direct push borings SP-5 through SP-8, and the installation of soil vapor wells VP-1 through VP-3, soil vapor probe SUBSLAB (SECOR, 2007). In addition, SECOR also supervised the abandonment of four (4) existing monitoring wells MW-1 through MW-4 and MW-5 and the installation of four (4) monitoring wells MW-6 through MW-9. Please refer to **Figures 2A and 2B** for location information. A summary of the construction of these monitoring wells is provided in **Table 1**. Thirty-four (34) subsurface soil samples were submitted for laboratory analysis collected from the borings converted into monitoring well the monitoring wells as well as borings SP-5 through SP-8. Subsurface water samples were also collected from these locations as well, the laboratory results of which are provided in **Table 2**. A summary of laboratory results are provided in **Table 7** (vapor) and **Tables 5 and 6** (soil). The laboratory results from the sub-slab vapor sample did not indicate concentrations of constituents of concern above laboratory reporting limits.

July/August 2008, Stantec Consulting Company (Stantec) supervised the installation of monitoring wells MW-10 and MW-11 (screen interval 5 to 15 feet bgs), and monitoring wells MW-12B, MW-13B, MW-14B, and MW-15B (screen interval 17 to 31 feet bgs). Stantec collected both soil and subsurface water samples from the new wells (Stantec, 2008). For a summary of well completion information, please refer to **Table 1** and **Appendix C**. For a summary of subsurface soil laboratory results, please refer to **Tables 5 and 6**. Subsurface water laboratory results are summarized in **Table 2**. Please refer to **Figures 2A and 2B** for location information.

December 2009, Delta Consultants prepared an investigation work plan dated December 31, 2009 to assess the PCE contamination in groundwater beneath the site vicinity (Delta, 2009).

August 2010, the GPP issued a letter dated August 9, 2010 responding to the submission of the December 31, 2009 assessment work plan. The GPP asserted that the work plan did not provide a scope of work that adequately assessed the origin of the PCE.

October 2010, Antea Group (formerly Delta Consultants) issued a work plan to the GPP entitled *Potential Tetrachloroethene (PCE) Source Evaluation Revised Work Plan* dated October 29, 2010.

February 2011, the GPP issued a letter dated February 8, 2011 responding to the submission of the October 29, 2010 assessment work plan. The GPP approved the portions of the scope of work outlined in the work plan.

May/June 2011, Antea Group supervised the installation of monitoring well MW-17B, and the advancement of six (6) soil borings SB-1 and SB-3 through SB-7 (Antea Group, 2011). For a summary of well completion information, please refer to **Table 1** and **Appendix C**. For a summary of subsurface soil laboratory results, please refer to **Tables 5 and 6,** and subsurface water laboratory results are summarized in **Table 2**. Please refer to **Figure 2B** for location information.

April/May 2012, Antea Group supervised the installation of soil borings SB-8 and SB-9, temporary well TW-1, and monitoring wells MW-18 and MW-19. Antea Group also supervised the destruction and replacement of Monitoring Well MW-10 with Monitoring Well MW-10R (Antea Group, 2012). Please refer to **Figures 2A and 2B** for location information. For a summary of well completion information, please refer to **Table 1** and **Appendix C**. For a summary of subsurface soil laboratory results, please refer to **Tables 5 and 6**. Subsurface water laboratory results are summarized in **Table 2**.

March 2013, Antea Group supervised the installation of monitoring wells MW-20 and MW-21 for additional definition of the shallow groundwater plume. Antea Group also supervised the advancement of soil boring SB-11 and the destruction of monitoring well MW-11 (Antea Group, 2013). Please refer to **Figures 2A and 2B** for location information. For a summary of well completion information, please refer to **Table 1** and **Appendix C**. For a summary of subsurface soil laboratory results, please refer to **Tables 5 and 6** and subsurface water laboratory results are summarized in **Table 2**.

June/July 2013, Antea Group supervised installation of monitoring wells MW-22 through MW-24 to assess potential contribution of PCE from the former waste oil UST (MW-22), to assess PCE concentrations upgradient of the site (MW-23), and to better define the extent of the dissolved phase plume (MW-24, installed adjacent to boring SB-11). Antea Group also supervised the advancement of soil boring SB-10 to assess onsite shallow soil conditions near the former fuel USTs (Antea Group, 2013). Please refer to **Figures 2A and 2B** for location information. For a summary of well completion information, please refer to **Table 1** and **Appendix C**. For a summary of subsurface soil laboratory results, please refer to **Tables 5 and 6,** and subsurface water laboratory results are summarized in **Table 2**.

August 2013 and January/February 2014, Antea Group installed and sampled off-site sub-slab, vapor point locations SS-1 through SS-4 using Vapor Pin™ to assess soil vapor conditions beneath the residential and commercial properties adjacent to and downgradient of the site (Antea Group, 2014). Antea Group collected vapor samples in August 2013 (warm season samples) and January/February 2014 (cold season samples). Please refer to **Figure 2A** for the location of the sampling points and **Table 7** for a summary of the laboratory results.

October 2014, Antea Group issued a document entitled *PCE Source Evaluation Report* dated October 8, 2014. This report summarized the results from the various past assessment activities with the goal of ascertaining if the former on-site waste UST removed in 1992 was a potential source of the PCE detected in subsurface water samples collected on- and off-site. The report concluded that the source of the PCE was from an off-site source (Antea Group, 2014). Based on the October 29, 2014 GPP letter, the source of the PCE likely originated from the Wardrobe Cleaners who received formal notification in a GPP October 30, 2014 letter requesting action. This letter was follow-up by three additional GPP letters dated July 26, 2016 to Family Cleaners located at 412 East 3rd Avenue, New A-1 Cleaners located at 17 E. 4th Avenue, and Former Quality Cleaners located at 508 East 3rd Avenue.

January 2015, Antea Group supervised the installation of Monitoring Well MW-25 and collected additional vapor sampling from sub-slab points SS-2 and SS-3 Antea Group, 2015). Please refer to **Figure 2A** for the location of the newly installed monitoring well and vapor sampling points. **Tables 2 and 7** provide a summary of the laboratory results for subsurface water and vapor samples.

2.3.4 Past Sensitive Receptor Evaluations

In June 1996, Pacific Environmental Group, Inc. (PEG) reported the results of a water supply well survey. PEG reviewed California Department of Water Resources (DWR) records to identify active and inactive water supply wells within a ¼-mile radius of the site. Based on the information included in the PEG report, there was one irrigation (location "D") identified over 2,000 feet south of the site (PEG, 1996).

September 2008, Stantec completed a sensitive receptor survey (SRS) within a ½-mile radius of the site as part of the investigation. Stantec reviewed DWR files, contacted the City of San Mateo and the local water purveyor California Water Service Company (Cal Water), completed a parcel survey within a 500-foot radius of the site, and performed a field canvas. Stantec identified three irrigation wells within ½-mile of the site. Stantec also identified one surface water body (San Mateo Creek) approximately 1,488 feet north of the site (Stantec, 2008).

2.4 Local Geologic and Hydrogeological Conditions

This section of the document provides a summary of the local geologic and hydrogeological conditions.

The City of San Mateo lies amid hills and flatlands along the shore of San Francisco Bay on the northeast side of the Santa Cruz Mountains, separated geologically and topographically from the range by the San Andreas Fault. The western hills are part of an extensive uplifted surface carved by San Mateo Creek into the alluvial fan on which the Site is located (San Mateo, 2009). The property lies near the end of the alluvial fan, approximately 1-mile southwest of San Francisco Bay at an elevation of approximately 20 feet above the North American Vertical Datum of 1988 (NAVD88). Soil boring and well details are summarized in **Table 1**. Boring logs are provided as **Appendix C**. Cross sections are shown on **Figures 3A** and **3B**.

The geologic map *Geology of the Onshore Part of San Mateo County, California: A Digital Database*, derived from United States Geological Survey Open-File Report 98-137, indicates the Site resides on Holocene alluvial fan and fluvial deposits (Brabb et al, 1998). The map explanation page provides a description of the alluvial fan deposits as medium dense to dense gravely sand or sandy gravel typically grading upward to sandy or silty clay.

In general, an alluvial fan is a "fan-shaped" geomorphic structure of detrital sediments deposited by surface water runoff at the base of a highland structure where there is an abrupt change in slope (Reineck, H.E. and Singh I.B., 1980). Alluvial fan sediments consist of intricately interlayered debris-flow and water-laid deposits. Individual depositional units are generally lenticular to irregular in shape and may be relatively continuous along the radial section, but have limited extent in cross-section. Grain sorting and size, and sediment bed thickness varies across the fan from the top to the base of the fan structure and reflects the mode of deposition. Maximum grain size and bed thickness decrease toward the base of the fan structure.

According to *California's Groundwater, Bulletin 118* from the California Department of Water Resources (CDWR), the Site lies within the San Mateo Plain Sub-basin of the Santa Clara Valley Groundwater Basin (CDWR, 2003). The sub-basin occupies a northwest-trending structural trough, bounded by San Francisco Bay to the east, San Francisquito Creek to the south, the Santa Cruz Mountains to the west, and the Westside Basin to the north. Water bearing formations in the sub-basin include the Plio-Pliestocene Santa Clara Formation and Quaternary alluvial deposits.

Surface water bodies near the Site include the following:

- San Mateo Creek (approximately 1,300 feet north of the Site
- Leslie Creek (approximately 0.85 mile southeast of the Site)
- San Francisco Bay (approximately 1 mile northeast of the Site)
- Seal Slough (approximately 1.5 miles east-northeast of the Site)

2.5 Site Specific Geologic and Hydrogeological Conditions

This section of the document provides a summary of the site-specific geologic and hydrogeological conditions. Antea Group compiled the information from previous reports developed by Antea Group and predecessor consultants that have worked on and around the Site.

The site-specific stratigraphic interpretation is based on the boring logs and cross sections with consideration to the regional depositional environment. Beneath the site, sandy silt/clay become inter-bedded with continuous to semi-continuous layers of silty/clayey sands and silty/clayey gravels to the maximum explored depth of 40 feet below ground surface (bgs). The cross sections effectively illustrate the heterogeneous system of debris and stream deposits consistent with a typical alluvial fan as described in **Section 2.4.1**. Cross Section A – A' is oriented along the radial slope of the alluvial fan in the predominant direction of groundwater flow and cross section B – B' is oriented across the radial slope of the alluvial fan cross gradient to groundwater flow. The cross sections illustrate the interlayered deposition and grain size and sorting variability typical of an alluvial fan (**Figures 3A** and **3B)**.

A previous consultant divided saturated soil to a depth of 31 feet beneath the Site into two zones defined by well screen intervals. Antea Group graphed groundwater elevations over time for the 20 active Site monitoring wells to evaluate the relative behavior of groundwater in the two zones (**Appendix D**). With few exceptions, groundwater elevations were similar and changed consistently over time in the Site wells indicating a single water-bearing unit beneath the Site.

The average depth to water for all Site wells as of the third quarter of 2016, including destroyed wells, is 15.16 feet below the top of well casings (BTOC). Historical gauging data is included in **Table 2**. Groundwater flow is predominantly to the east at an average gradient of 0.003 foot per foot (ft/ft). A subsurface water, flow direction Rose diagram and a gradient table are included as **Appendix E**.

3.0 SUMMARY OF REMEDIATION ACTIVITIES

This section of the document provides summary of remedial activities at the Site along with the estimated amount of material removed from the subsurface.

3.1 Removal Action Summary

The following table provides a summary of the product, soil, subsurface water, and vapor mass removed from the Site during past field activities.

Activity	Product (gallons)	Soil (tons)	Water (gallons)	Vapor Mass (pounds)	Reference
1992 UST and Dispenser Island Decommissioning Activities	NA	1,200	5,800	NA	KEI, 1992a,c
1996 Oil/Water Separator	NA	NA	NA	NA	GSI, 1996
Estimated Totals	**0**	**1,200**	**5,800**	**0**	

Notes:

Conversion from cubic yards to tons, assumes 1.5 tons per cubic yard.

3.2 Unsaturated Zone Remedy

This section provides a summary of the remedy implemented at the Site to address the residual impacts from the release of fuel hydrocarbons on the subsurface soil situated within the unsaturated zone beneath the Site.

3.2.1 1992 UST and Dispenser Island Decommissioning Activities

In August 1992, KEI observed the removal of two 12,000-gallon USTs used to store fuel, one 550-gallon steel waste oil UST, and the associated product piping and dispensers. Upon removal, KEI observed a crack in the sidewall of the super unleaded gasoline tank, coincident with the location of a tank backfill monitoring well, and two 3/16-inch diameter holes in the waste oil tank. KEI observed obvious petroleum hydrocarbon contamination in the gasoline UST cavity including free product. The eastern side of the gasoline UST cavity was over-excavated to approximately 22 feet deep over an area approximately 30 feet by 27 feet to remove as much of the impacted soil

as possible (approximately 660 cubic yards). In addition, approximately 5,800 gallons of subsurface water (observed at 21-feet bgs) and product were pumped from the gasoline UST cavity (KEI, 1992a). A subsequent report summarizing the stockpile sampling completed in preparation for transport and disposal indicated that 250 cubic yards of soil was transported to Mountain View Landfill and 650 cubic yards of soil was transported to Red Bluff, California for treatment and disposal, or a total of 800 cubic yards (KEI, 1992c). Based on 1.5 tons per cubic yard, an estimated total of soil transported to an off-site facility is 1,200 tons.

3.2.2 1996 Oil/Water Separator

In January 1996, GSI observed the excavation and removal of a 150-gallon capacity oil/water separator (GSI, 1996). GSI collected a confirmation soil sample (OWS-S-4.5) from underneath the oil/water separator at a depth of 4.5 feet bgs and submitted it for analysis. The available documentation does not indicate the amount of soil removed during the decommissioning activities. GSI requested analysis of the soil sample for TPHg and BTEX by EPA methods 8015/8020. GSI also requested analysis for TPHd by EPA Method 8015/3550, O&G by Standard Method 5520 D/E&F, and cVOCs by EPA Method 8010. The laboratory analyzed for metals cadmium, chromium, nickel, lead, and zinc using EPA Method 6010/200.7. The results from the analytical laboratory were as follows:

- TPHg – Not detected in concentrations above laboratory reporting limits.
- BTEX – benzene and ethylbenzene were not detected in concentrations above laboratory reporting limits; toluene and xylenes were detected at 0.006 mg/kg and 0.009 mg/kg, respectively.
- TPHd – 1.5 mg/kg.
- O&G - Not detected in concentrations above laboratory reporting limits.
- cVOCs - Not detected in concentrations above laboratory reporting limits.
- Metals – cadmium was not detected in concentrations above laboratory reporting limits, while chromium, nickel, lead, and zinc were detected at 160 mg/kg, 99 mg/kg, 12 mg/kg, and 69 mg/kg, respectively.

4.0 SENSITIVE RECEPTOR SURVEY

The following section provides information on water production wells and surface bodies of water that have been identified by Antea Group as sensitive receptors within a ½-mile (2,640 feet) radius of the Site. Antea Group requested Well Completion Reports from the CDWR, ordered *Offsite Receptor* and *GeoCheck®* reports from Environmental Data Resources, Inc. (EDR), and reviewed sensitive receptor survey results for other active cases in close proximity to the Site on GeoTracker. The following section provides a summary of the results.

4.1 Surface Bodies of Water

The closest surface body of water is San Mateo Creek, located cross gradient of the Site source area approximately 1,300 feet north of the Site trending east to west. Please refer to **Figure 4** for the location of this surface feature.

4.2 Water Production Wells

Antea Group reviewed historical sensitive receptor data for both the subject Site and nearby sites, Well Completion Reports from the CDWR, updated GeoCheck® and Offsite Receptor reports from Environmental Data Resources, Inc. (**Appendix F**), and the Groundwater Ambient Monitoring and Assessment Program (GAMA) information on the GeoTracker website to identify water production wells within 1,000-feet of the Site. Antea Group identified four private irrigation wells within the prescribed radius. Please refer to **Figure 4** for the well details and locations.

Potentially, the closest private irrigation well is approximately 675 feet northeast of the Site at 728 East Fourth Avenue (RRM, 2006). According to the February 15, 2006 *Site Conceptual Model and Corrective Action Evaluation* for the Former Wickland Oil Regal Service Station at 706 East Fourth Avenue, consultant RRM, Inc. (RRM) learned of the well from the San Mateo County Health Services Agency and verified the well in the field. On March 3, 2017, Antea Group personnel visited the residence to verify the status of the well. Unfortunately, the resident(s) were not home at the time of the visit and did not respond to the status inquiry letter left at the door.

RRM identified two additional wells east-northeast (downgradient) of the Site at 516 South Fremont Street and 521 South Fremont Street approximately 700 feet and 925 feet from the Site, respectively (RRM, 2006). Neither RRM nor Antea Group could verify the well at 516 South Fremont Street. During the March 3, 2017 visit, the current tenant, Missy Schepis, stated she was unaware of a well on the property. According to RRM, Inc., the well at 521 South Fremont Street was sampled in 2003 for TPHg, BTEX, and methyl tertiary butyl ether (MTBE) with all results non-detect, and was actively being used in 2006. During the March 2017 visit, a caretaker answered the door and informed Antea Group the owner was unavailable and an attorney managed the property. Antea Group personnel left a status inquiry letter for the attorney but did not receive a response.

Stantec identified one well in their May 4, 2009 *Additional Assessment and Sensitive Receptor Survey Report* prepared for Former 76 Service Station No. 4178 at 615 East Third Avenue (Stantec, 2009). The well is located approximately 775 feet north-northwest of the Site at 216 South El Dorado Street. The property owner returned the status inquiry letter left at the door by Antea Group on March 3, 2017 and reported the well is still on the property, but not operational. The returned survey letter is included as **Appendix G**.

A Well Completion Report from the CDWR provided information for one well at 800 South Claremont Street (**Appendix H**). During the March 2017 visit, Antea Group learned the Raiser Organization currently occupies the property and obtained a phone number for an employee likely to have information about the well. Antea Group subsequently called Ellen Roy and learned the well is still at the property and actively used for irrigation.

4.3 Public Receptors

The EDR report identified 188 public receptors within the 1-mile search radius. The receptors identified included Day Care Centers, Schools, and Hospitals (or medical facilities). The sensitive receptors situated within ¼-mile of the Site include:

- The Sutter Visiting Nurse Association & Hospice or Visiting Nurse Association of San Mateo County identified under Hospitals; (EDR Identification Nos: A1 through A4, **Appendix F**)
- Daycare facility Kindercourt; (EDR Identification Nos: B5 and B6, **Appendix F**)
- Daycare facility Intercommunal Survival School; (EDR Identification No: 7, **Appendix F**)
- Daycare facility Project Intermission; (EDR Identification No: 8, **Appendix F**)

5.0 DISTRIBUTION OF CONSTITUENTS OF CONCERN

This section of the document provides a summary of the subsurface soil and water conditions beneath the Site over time following the remediation efforts previously described in Section 4.0.

5.1 Identification of Past Fuel Release Sources

This section summarizes the laboratory data for both the unsaturated and saturated zone at or near the release of the fuel hydrocarbons into the subsurface beneath the Site. Based on available documentation, the primary release occurred in the area of the current USTs.

Pre-1992 subsurface soil laboratory data is not available, so evaluation of fuel hydrocarbons in soil is limited to data collected during and between the 1992 and 1996 decommissioning and remodeling efforts (Sections 4.2.1 and 4.2.2). The maximum reported concentrations of constituents of concern (COCs), fuel hydrocarbons in the gasoline carbon range including benzene and ethylbenzene, in subsurface soil samples collected in 1992 through 1996 are summarized in the following table. A detailed summary of laboratory results is provided in **Table 5** and on **Figure5A**.

Area of Concern	Sample Location	Sample Depth (feet)	COC and Maximum Results (mg/kg)
Former/Current UST Location	B2	18	GRO – 5,000; Benzene – 47; Ethylbenzene - 120

Notes:
GRO – gasoline range organics reported as TPH-g

The impact on the saturated zone resulting from the release of fuel hydrocarbons is demonstrated by the laboratory results for subsurface water samples obtained from the UST excavation (W1) and monitoring well MW-2 situated adjacent to the source area referenced above. Please refer **Figure 2A** for the location of the monitoring well and to **Table 2** for a summary of laboratory results. The initial GRO, benzene, and MTBE concentrations detected in the water samples collected from the referenced locations are summarized in following table:

Area of Concern	Well ID	COC and Maximum Results (µg/L)
Former/Current UST Location	W1	GRO – 50,000; Benzene – 11,000; MTBE – NA
	MW-2	GRO – 89,000; Benzene – 9,700; MTBE – 3,500

Notes:
NA – Not analyzed

5.2 Post UST Removal Subsurface Soil Conditions

The only remedies applied at the Site are the 1992 and 1996 decommissioning and remodeling efforts (Sections 4.2.1 and 4.2.2). Please refer to **Figure 5B** for a summary of available GRO, benzene, ethylbenzene, and naphthalene laboratory results for soil collected between 2006 and 2008 and to **Figure 5C** for a summary of results for soil collected between 2011 and 2013. **Figure 6** provides the laboratory results for benzene, ethylbenzene, and naphthalene detected in soil samples collected between the surface and 10 feet bgs. A complete summary of soil data is provided in **Tables 5 and 6**.

5.3 Post UST Removal Subsurface Water Conditions

This section provides a summary of the current water quality and COC plume stability status in the saturated zone.

The monitoring well network currently defines the lateral extent of the dissolved phase, petroleum hydrocarbon plume associated with the Site to Water Quality Objectives (WQOs). Since 2013, the laboratory results for benzene in subsurface water from all Site wells have been below the LTC Policy threshold of 3,000 µg/L. Benzene concentrations reported for subsurface water samples from Site wells in 2016 were also below 1,000 µg/L except for the samples from well MW-6, which had reported benzene concentrations of 1,500 µg/L in the sample collected on January 27, 2016 and 1,200 µg/L in the sample collected on July 14, 2016. The laboratory results for MTBE in subsurface water from Site wells have been below the LTC Policy threshold of 1,000 µg/L since 2014. **Figures 7A and 7B** illustrate the lateral extent of dissolved phase benzene and MTBE in subsurface water samples collected from the monitoring wells associated with the ongoing monitoring program since 2013 and 2014, respectively.

To evaluate the current status of the COC saturated zone plume stability, the data collected during the on-going monitoring programs is evaluated using time-series graphs, the Mann Kendall statistical testing methodology, and comparing the past maximum dissolved-phase concentrations of the COCs (benzene and MTBE) to the monitoring results summarized below for first and third quarter 2016. The goal is to provide documentation to support that the residual dissolved-phase plume is stable and/or decreasing in its concentration trend overtime.

Constituent	Number of Locations	Range of Concentrations Reported (µg/L)
Benzene	18 (Q116) and 6 (Q316)	<0.50 to 1,500
MTBE	18 (Q116) and 6 (Q316)	<1.0 to 170

Note:
< – Not detected at a concentration above the indicated laboratory reporting limit

For a complete summary of results, refer to **Table 2**.

5.3.1 Time Series Evaluation

Graphs showing changes to groundwater elevation, and MTBE and benzene concentrations over time for wells MW-4, MW-6, MW-7, MW-8, MW-10R, MW-12B, MW-13B, MW-14B, MW-15B, MW-17B, MW-18, MW-19, MW-20, and MW-21 are included as **Appendix I**. These graphs show stable or reducing concentration trends for the dissolved-phase constituents within the last 10 years.

5.3.2 Mann Kendall (MK) Test

Additional evidence for the presence of a stable or decreasing concentration trend in the saturated zone is demonstrated by the use of the MK test. Antea Group used the laboratory results for water samples collected from wells MW-6, MW-10R, MW-13B, MW-18, and MW-21 during the ongoing subsurface water monitoring program in the MK analysis. The data used in the MK analysis focused on benzene and MTBE. In the cases where the laboratory result was below the laboratory detection limit for a given constituent, a zero value was used in the MK analysis.

The MK test is a non-parametric analysis that compares the relative magnitudes of data in a temporal order (USEPA, 2000). This statistical testing methodology is particularly useful in analyzing subsurface water sample data since it does not need to conform to a particular distribution or sampling frequency past sampling data values are evaluated as an ordered time series and each monitoring data value is compared to each subsequent data values (Gilbert, R.O., 1987). The initial value of the MK statistic (S) is assumed zero (0) with no trend. If a data value from a later time period is higher than a data value from an earlier time period, "S" is incremented by one (1). If the data value from a later time period is lower than a data value sampled earlier, "S" is decremented by one (1). The net result of each increment and decrement yields the final value of Mann-Kendall statistic (S). A positive value of "S" is an indicator of an increasing trend, and a negative value indicates a decreasing trend. Intermediate values of "S" indicate the null hypothesis or baseline condition and the absence of a trend, or a "stable" result. Lastly, a probability level, referred to as the confidence factor (CF), is applied to the final value of "S" to statistically quantify the significance of the trend by computing the probability associated with the sample size (USEPA, 2000).

The results of the MK test indicate that the saturated zone, petroleum hydrocarbon plume as represented by benzene and MTBE is stable and/or decreasing in concentration over time. The MK Test results are included as **Appendix J**.

5.3.3 COC Concentration Reduction Evaluation

The final method to demonstrate the reduction of constituent concentrations for the Site is provided on **Table 3**. The table compares the maximum concentrations of benzene and MTBE detected during the on-going subsurface water monitoring program at the Site beginning in 1994 to the most recent data obtained for each monitoring well. Based on these comparisons, the average site-wide reduction in benzene and MTBE concentrations is an estimated 87.4%.

6.0 UPGRADIENT PCE PLUME

The following sections present background information and data on the PCE and degradation compounds, trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), trans-1,2-dichloroethene (trans-1,2-DCE), and vinyl chloride, that are co-mingled with the Site's petroleum hydrocarbon plume. The importance of the PCE plume is that it has degraded groundwater to "poor quality", exaggerates the extent of petroleum hydrocarbons both upgradient and vertically southeast and southwest of the Site, and presents a vapor intrusion risk to structures adjacent to the Site on the southeast.

6.1 Background

In third quarter 2006, SECOR International Inc. (SECOR) requested a review of the chromatograms for the groundwater samples collected from wells MW-1, MW-4, and MW-5 noted as atypical for gasoline (SECOR, 2006). The laboratory concluded the reported compound was PCE and not gasoline related. SECOR added PCE to the analytical suite for the periodic groundwater sampling events. In their February 28, 2007 *Offsite Assessment Report*, SECOR recommended an investigation to determine the source of the PCE (SECOR, 2007). Based on elevated PCE concentrations subsequently reported in downgradient wells MW-12B and MW-13B, and PCE in soil from the bottom of the waste oil, tank cavity in 1992, the GPP concurred with the need for an investigation in their letter dated June 25, 2009 (GPP, 2009). Delta Consultants (currently Antea Group) assumed management of the Site in September 2009 and subsequently performed the following investigative activities.

- Analyzed additional soil and groundwater samples for PCE, TCE, cis-1,2-DCE, trans-1,2-DCE, and vinyl chloride.
- Evaluated soil gas samples collected onsite and at 521 and 603 East 5th Avenue for PCE.
- Identified and assessed former and existing uses for the parcels bordering the Site.

6.2 PCE in Soil

PCE was first reported at a concentration of 0.0064 mg/kg in soil sample WO1 collected in 1992 from the bottom of the waste oil, tank cavity at approximately 8 feet bgs. All soil samples collected since 2011 with reported PCE and "daughter" product concentrations including the confirmation samples from SB-8 advanced near the location of WO1, have been from the saturated zone. The shallowest sample with a reported detection of PCE was from SB-6 at 15 feet bgs. The laboratory only reported PCE in the SB-8 samples collected at 23.5 feet and 27.5 feet bgs with a maximum concentration of 0.013 mg/kg. The "daughter" products were not reported in the samples.

6.3 PCE in Groundwater

Laboratories reported concentrations of PCE and chlorinated solvent degradation products in groundwater samples from all active site wells except MW-25 and borings SP-7, SB-1, SB-3 through SB-9, SB-11, and TW-1. Please refer to **Table 4** for a summary of historic PCE, TCE, cis-1,2-DCE, trans-1,2-DCE, and vinyl chloride in groundwater.

With the exceptions of the singular concentrations of benzene (first quarter 2008), and ethylbenzene, xylenes, and naphthalene (second quarter 2012) in samples from MW-7, only PCE, chlorinated solvent degradation products, and GRO have been reported in wells MW-23, MW-7, and MW-15B located southwest and southeast of the Site USTs (**Table 2** and **Table 4**). Laboratories qualified the GRO results in 10 of the 15 samples from MW-7, seven of the 11 samples from MW-15B, and three of the 6 samples from MW-23 as having chromatograms atypical of gasoline, primary compounds not found in typical gasoline, or the presence of PCE and its daughter products.

6.4 PCE in Vapor

In 2013, 2014, and 2015, Antea Group collected soil gas samples from onsite vapor wells VP-1 and VP-3 and offsite sub-slab probes SS-1 through SS-4. Please refer to **Table 7** for a summary of historic soil gas concentrations. Reported concentrations of gasoline related compounds were below the LTC Policy thresholds and the February 2016 (version 3) SFBRWQCB Environmental Screening Levels (ESLs) in all samples. Only PCE concentrations exceeded the ESL with a maximum concentration of 2,200 micrograms per cubic meter (µg/m3) reported in a sub-slab sample from SS-1 located at 521 East Fifth Avenue, which borders the Site on the southeast.

6.5 Upgradient Source

Antea Group identified five current or former dry cleaning facilities upgradient of the Site (Antea Group, 2014).

- Family Cleaners at 412 East Third Avenue, approximately 550 feet west-northwest of Site
- Wardrobe Cleaners at 335 East Fourth Avenue, approximately 560 feet west-southwest of the Site
- Blue Ribbon Cleaners at 306 East Fifth Avenue, approximately 800 feet southwest of the Site
- San Mateo Cleaners at 507 South B Street, approximately 850 feet southwest of the Site
- Bluesky Cleaners at 200 East Second Avenue, approximately 1,300 feet west of Site

Based on relatively consistent PCE concentrations in upgradient and downgradient Site wells and the layout and flow direction of sanitary sewer lines, the GPP concurred in their letter dated October 29, 2014 that the PCE in groundwater beneath the Site and vicinity likely originated from Wardrobe Cleaners upgradient (GPP, 2014). The GPP also stated they would not require the responsible party for the fuel release at the Site to perform additional investigation of the PCE release.

In September 2003, the Department of Toxic Substances Control (DTSC) completed a Site Screening Form for Wardrobe Cleaners. On the form, the DTSC notes dry cleaning operations began at the site in 1995. However, an old newspaper page from the San Mateo Times indicates Wardrobe Cleaners began operation on the corner at

333 East Fourth Street in 1954. In the 2003 summary, the DTSC confirmed the original construction at the site (completed and occupied by 1939) included bare dirt floors, and that the floor slab was only completed within the 20 years prior to 2003. Based on their screening, the DTSC recommended a Preliminary Endangerment Assessment to identify a potential release. On April 15, 2005, the DTSC issued a No Action Determination for the site.

6.6 Current PCE Status

On July 26, 2016, the GPP issued letters to three dry cleaners requesting information about their solvent use in relation to the PCE and breakdown products beneath the Site and immediate vicinity.

- Former Quality Cleaners at 508 East Third Avenue (GPP, 2016a)
- Family Cleaners at 412 East Third Avenue (GPP, 2016b)
- New A-1 Cleaners at 17 East Fourth Avenue (GPP, 2016c)

The GPP indicated in the letters that the PCE and breakdown product concentrations in soil and groundwater collected from Wardrobe Cleaners and the property at 330 South Claremont Street did not definitively identify either site as the origin of the solvent contamination.

7.0 CONCEPTUAL SITE MODEL

The Conceptual Site Model (CSM) of the Site and surrounding area (stratigraphy, hydrogeology, contaminant source, nature, and extent) has been described in historical documents and previous sections and subsections of this document: (Sections 2.0, 3.0, and 5.0). The soil borings and monitoring well details (**Table 1**), boring logs (**Appendix C**), and cross sections (**Figures 3A** and **3B**) provided most of the data used for the interpretation of the CSM.

The cross-sections developed from the boring logs in **Appendix C** illustrate the heterogeneity of the soil, which has resulted in vertically connected, semi-continuous water bearing horizons. Fuel hydrocarbons released from the former gasoline USTs has migrated east in groundwater flowing through coarser grained sediments consistent with the braided stream system of an alluvial fan. Data and trend analyses discussed in **Section 5.0** indicate the plume has reached its maximum extent and is stable to decreasing.

8.0 LTC POLICY STATUS SUMMARY

As previously referenced, the SWRCB promulgated Resolution No. 2012-0016, also referred to as the LTC Policy, to assist responsible parties in evaluating if a given candidate site qualifies for a low-risk closure designation. A review of the Site in reference to the LTC Policy criteria indicates the following:

8.1 General Criteria

The following provides a summary of the status of the 11 criterions general LTC criteria based on the information presented in previous sections of this document.

8.1.1 Public Water Supply

California Water Service Company (CWSC) supplies drinking water to the City of San Mateo. According to the 2011 *Urban Water Management Plan*, CWSC purchases all water for the City of San Mateo from the San Francisco Public Utilities Commission (CWSC, 2011). In accordance with SWRCB Resolution No. 88-63 (as revised by Resolution No. 2006-0008) entitled *Sources of Drinking Water,* the San Francisco Bay Regional Water Quality Control Board (SFBRWQCB) designates the water in the San Mateo Plain Sub-basin as having existing beneficial uses. The existing uses listed in their 2015 *San Francisco Bay Basin (Region 2) Water Quality Control Plan (Basin Plan)* include municipal, domestic, and industrial process and service supply (SFBRWQCB, 2015). The plan lists agricultural supply as a potential beneficial use.

Resolution No. 88-63 states "All surface and ground waters of the State are considered to be suitable, or potentially suitable, for municipal or domestic water supply and should be designated by the Regional Boards…" followed by a list of exceptions. Exemption 1.b. indicates surface or groundwater should not be considered a drinking water source if "There is contamination, either by natural processes or human activity (unrelated to a specific pollution incident), that cannot reasonably be treated for domestic use using either Best Management Practices or best economically achievable treatment practices…."

The presence of the PCE could define subsurface water in the Site area as "poor quality" under Resolution No. 88-63. In addition, installing new groundwater production wells in the future is unlikely due to the limited capacity of the water-bearing material making viable production well installations economically infeasible (CWSC, 2011).

8.1.2 Unauthorized Release Consists Only of Petroleum Hydrocarbons

Permitted storage at the site only consists of gasoline, waste oil, and relatively small quantities of chemicals used in the automobile service facility.

8.1.3 Unauthorized Release Has Been Stopped

As outlined in **Section 2.2**, ConocoPhillips removed and replaced the entire fueling system in 1992 including the USTs, dispensers, and piping.

8.1.4 Free Product Removal

Free product was only present in the gasoline UST cavity in 1992 (KEI, 1992). Approximately 5,800 gallons of product and water were removed from the tank cavity. Free product has not been reported in any of the monitoring wells or borings for the Site (**Table 2**).

8.1.5 Conceptual Site Model

The CSM of the Site and surrounding area (stratigraphy, hydrogeology, contaminant source, nature, and extent) has been described in historical documents and previous sections and subsections of this document (Sections 2.0, 3.0, and 5.0).

8.1.6 Secondary Source Removal

During removal of the fueling infrastructure in August 1992, the eastern end of the gasoline UST cavity bordering South Delaware Street was over-excavated. Approximately 900 cubic yards of soil were removed from the site (KEI, 1992c). In addition, approximately 5,800 gallons of groundwater and product were pumped from the gasoline UST cavity.

8.1.7 MTBE in Soil and Groundwater

Both soil and groundwater have been tested for MTBE and the results were reported in accordance with the Health and Safety Code section 25296.15. Results of the soil and groundwater testing were reported in the associated site assessment reports, the periodic monitoring and sampling reports uploaded to the California State Water Resources Control Board Geotracker database.

8.1.8 Nuisance Does Not Exist at the Site

A nuisance, as defined by Water Code Section 13050-13051 meets each of the following criteria:

- Is injurious to health, or is indecent or offensive to the senses, or an obstruction to the free use of property, so as to interfere with the comfortable enjoyment of life or property;
- Affects at the same time an entire community or neighborhood, or any considerable number of persons, although the extent of the annoyance or damage inflicted upon individuals may be unequal, and;
- Occurs during, or because of, the treatment or disposal of wastes.

No nuisance conditions exist at the Site.

8.2 Media-Specific Criteria

8.2.1 Groundwater

Antea Group considers the Site to meet Class 2 of groundwater-specific criteria in the LTC Policy for the following reasons:

- Fuel hydrocarbon constituent concentrations are defined by the existing well network to WQOs and demonstrate stable to decreasing trends (SWRCB, 2012).
- Based on the data collected in third quarter 2016, the maximum estimated lateral extents of dissolved-phase GRO and dissolved-phase benzene measured from the primary source area are approximately 350 feet and 245 feet, respectively (**Figures 8 and 9**). Since 2014, only subsurface water samples from wells MW-6, MW-13B, and MW-18 located onsite near the source area have consistently reported MTBE

at concentrations greater than the laboratory reporting limits (**Figure 7B**). Benzene has the greatest toxicity of the soluble fuel hydrocarbon constituents, and the maximum estimated plume length associated with the site is less than the Class 2 criteria of 250 feet. The maximum estimated GRO/TPHg plume length is greater than 250 feet; however, the length is less than the 90th percentile plume length of 413 feet determined by Shih et.al. in their 2004, peer-reviewed study of plume lengths at 500 California UST sites used to establish the LTC criteria as described in the *Technical Justification for Groundwater Media-Specific Criteria* (SWRCB, 2102b). The 2012 Technical Justification also notes that the LTC Policy does not set criteria for GRO/TPHg, which represents dissolved hydrocarbons that pose little risk to human health or groundwater quality (SWRCB, 2012b).

- No free product is present in the wells associated with the Site (**Table 2**).
- Although private irrigation wells are located within 1,000 feet of the estimated plume boundary, no municipal water supply wells or surface bodies of water are located within 1,000 feet (**Section 4.0**). Furthermore, the studies cited in the 2012 Technical Justification including the study by Shih et.al. indicate "…a total separation distance from the source area to the receptor of about 500 feet should be protective for 90% of plumes from UST sites…" The closest potential irrigation well to the site is approximately 675 feet from the source area. The Class 2 receptor distance represents "…an additional 400% plume length safety factor…" In addition, the limited capacity of the water-bearing materials in the Site area makes viable water production wells unlikely and the presence of the PCE (**Section 6.0**) makes groundwater in the area "poor quality" under Resolution No. 88-63 (SWRCB, 1988).
- The dissolved-phase benzene and MTBE concentrations reported in the wells of the monitoring network are less than the LTC Policy thresholds for Class 2. The dissolved-phase benzene concentrations reported in all the wells of the monitoring network have been less than 3,000 µg/L since at least 2013. The dissolved-phase MTBE concentrations in the wells of the monitoring network have been less than 1,000 µg/L since 2014 (**Table 2 and Figures 7A and 7B**).

8.2.2 Petroleum Vapor Intrusion to Indoor Air

The exception for an active commercial petroleum fueling facility applies to the Site. The primary vapor risk in the site vicinity is from the chlorinated solvents (**Section 6.0**). **Table 7** provides a summary of soil vapor data collected for the Site.

8.2.3 Direct Contact and Outdoor Air Exposure

Under the LTC Policy, assessment of Direct Contact/Outdoor Air Exposure risk within the footprint of the Site is based on the residual impact of benzene, ethylbenzene, and naphthalene in subsurface soil between the ground surface and 10 feet bgs. Since the Site is an active, commercial fuel dispensing facility, Antea Group evaluated the Site using the Commercial/Industrial and Utility Worker's scenarios. The LTC Policy criteria are summarized the following table:

COC	Commercial/Industrial Scenario		Utility Worker Scenario
	Surface to 5-feet bgs	5 to 10 feet bgs	Surface to 10-feet bgs
Benzene	8.2 mg/kg	12 mg/kg	14 mg/kg
Ethylbenzene	89 mg/kg	134 mg/kg	314 mg/kg
Naphthalene	45 mg/kg	45 mg/kg	219 mg/kg

Figure 6 shows all soil samples collected for the Site between the surface and 10 feet bgs. Only two locations (MW-3 and MW-2) produced soil with analytical results above the laboratory reporting limits for the LTC Policy constituents of concern. In both locations, the results were below the LTC Policy maximum allowable concentrations for the Commercial/Industrial and Utility Worker's scenarios. **Tables 5 and 6** provide a tabular summary of the laboratory results from subsurface soil investigations completed at the Site.

Additionally, Antea Group performed a statistical evaluation to evaluate the likelihood of encountering the three constituents of concern at concentrations exceeding the LTC Policy thresholds in future Commercial/Industrial and Utility Worker scenarios. Antea Group entered the laboratory data for soil collected between the surface and 10 feet bgs into Minitab statistical software Version 17.3.1 to calculate average exposure concentrations within the Site boundaries (March, 2016). Typically in performing this type of analysis, a 95 percent upper confidence level (95% UCL) average concentration is routinely used in risk assessments in California, and is recommended in the 2012 Leaking Underground Storage Tank (LUFT) Guidance Manual (SWRCB, 2012). The following key elements were calculated using statistical analysis:

- The mean concentration for Benzene is 0.004790 mg/kg with a standard deviation of 0.001760 mg/kg.
- The mean concentration for Ethylbenzene is 0.004830 mg/kg with a standard deviation of 0.001941 mg/kg.
- The mean concentration for Naphthalene is 0.005000 mg/kg with a standard deviation of 0.000000 mg/kg.

The following key elements were calculated using the Kaplan-Meier (KM) method:

- The mean concentration for Benzene is 0.00479 mg/kg with a standard error of 0.002489 mg/kg.
- The mean concentration for Ethyl-benzene is 0.00483 mg/kg with a standard error of 0.002745 mg/kg.
- The mean concentration for Naphthalene is 0.005 mg/kg with a standard error of 0.000 mg/kg.

The 95% UCL was calculated using the mean and standard deviation values for each COC. Note that the 95% UCL concentration is a value that has a 5% probability of exceedance. This means that there is 95% confidence that the true distribution of the sampling data has a population mean less than or equal to the calculated UCL. The Minitab software calculated the UCL using the Kaplan-Meier statistical method and suggested use of the following 95% UCL values:

- Benzene - 0.0051994 mg/kg
- Ethylbenzene - 0.0052815 mg/kg
- Naphthalene - 0.005 mg/kg

Below are summary tables that compare the 95% UCL concentrations to the LTC concentrations for soil.

BENZENE	Feet Below Grade	LTC Conc. (mg/kg)	Max Concentration (mg/kg)	95% UCL Concentration (mg/kg)	Meets LTC Criteria
Commercial/Industrial	0-5	8.2	N/A	N/A	Yes
	5-10	12	48.00	0.0051994	
Utility Worker	0-10	14	48.00	0.0051994	

ETHYLBENZENE	Feet Below Grade	LTC Conc. (mg/kg)	Max Conc. (mg/kg)	95% UCL Concentration (mg/kg)	Meets LTC Criteria
Commercial/Industrial	0-5	89	ND	N/A	Yes
	5-10	134	180.0	0.0052815	
Utility Worker	0-10	314	180.0	0.0052815	

NAPHTHALENE	Feet Below Grade	LTC Conc. (mg/kg)	Max Conc. (mg/kg)	95% UCL Concentration (mg/kg)	Meets LTC Criteria
Commercial/Industrial	0-5	45	ND	N/A	Yes
	5-10	45	53.00	0.005	
Utility Worker	0-10	219	53.00	0.005	

The statistical analysis of the subsurface soil samples (**Figure 6**) indicates it is unlikely that benzene, ethylbenzene, or naphthalene would be encountered above the LTC Policy thresholds for the Commercial/Industrial and Utility Worker scenarios during future subsurface activities at the Site.

Appendix K contains the Minitab worksheets and the data table used for the calculations.

9.0 CLOSURE REQUEST DISCUSSION

A summary of the Site conditions relative to the LTC Policy is presented below.

General Criteria

The site meets each of the eleven criterions for the GPP to consider the Site for closure of active Case Number 110069.

Media-Specific Criteria

Groundwater: The site meets the criteria for definition, stability, and decreasing in areal extent (Section 5.3). The following describes site-specific subsurface water conditions for the aspects covered in the LTC Policy.

- The maximum estimated lateral extent of the dissolved-phase benzene plume, which has the greatest toxicity of the soluble fuel hydrocarbon constituents and presents the highest risk to human health and groundwater quality is less than 250 feet in length (**Figure 9**).
- No free product is present in the wells of the monitoring network (**Table 2**). All free product was removed during the 1992 UST excavation.
- No municipal water supply wells or surface bodies of water are located within 1,000 feet of the maximum extent of the plume (**Section 4.0**). No private irrigation wells are located within 500 feet of the source area, which should be an adequate protective distance for 90% of plumes from UST sites (**Section 8.2.1**). In addition, the limited capacity of the water-bearing materials in the Site area makes viable water production wells unlikely and the presence of the PCE (**Section 6.0**) makes groundwater in the area "poor quality" under Resolution No. 88 63 (SWRCB, 1988).
- Dissolved-phase benzene and MTBE concentrations in the wells of the monitoring network are less than 3,000 µg/L and 1,000 µg/L, respectively (**Table 2**).

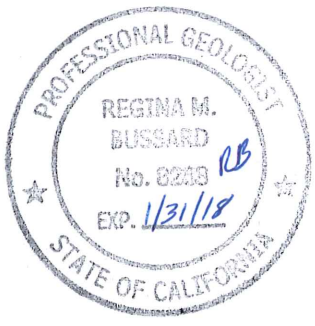
Due to the proximity of potential receptors, Site conditions do not exactly match Class 2 of the groundwater-specific criterial in the LTC Policy; however, the conditions allow an adequate safety factor for 90% of plumes from UST sites. Consequently, Antea Group's believe conditions also warrant the Site be considered under Criterion 5 as a low threat to human health and safety as well as the environment.

Petroleum Vapor Intrusion to Indoor Air: The exception for an active commercial petroleum fueling facility applies to the Site.

Direct Contact and Outdoor Air Exposure: The site meets the LTC Policy MSC Table 1 DC&OAE limits as summarized in **Section 8.2.3**.

10.0 RECOMMENDATION

Considering the above, Antea Group believes current site conditions adequately meet the LTC Policy requirements posing a low threat to human health and safety and to the environment, and recommends regulatory closure for (GPP Case Number 110069).



11.0 REMARKS

The findings contained in this report represent Antea Group's professional opinions based upon the currently available information and are arrived at in accordance with currently acceptable professional standards. For any reports cited that were not generated by Antea USA, Inc., the data from those reports are used "as is" and is assumed to be accurate. Antea USA, Inc. does not guarantee the accuracy of this data for the referenced work performed nor the inferences or conclusions stated in these reports. This report is based upon a specific scope of work requested by the client. The Contract between Antea Group and its client outlines the scope of work, and only those tasks specifically authorized by that contract or outlined in this report were performed. This report is intended only for the use of Antea Group's Client and anyone else specifically listed on this report. Antea Group will not and cannot be liable for unauthorized reliance by any other third party. Other than as contained in this paragraph, Antea Group makes no express or implied warranty as to the contents of this report.

If you have any questions regarding this document or need any additional information about the Site, please do not hesitate to contact William Patzelt at (916) 369-6481.

Sincerely,

William Patzelt, P.G.
Project Manager
Antea Group

NG	Not Gauged	NM	Not Measured	TAME	Tertiary-amyl methyl ether		

◊	The elevations were surveyed relative to mean sea level, per the City of San Mateo Benchmark #33-2 (elevation = 17.65 feet amsl)
†	TOC elevations were surveyed by Morrow Surveying on August 13, 2005 to the NAVD 88 datum by GPS observations.
††	TOC elevations were surveyed by Morrow Surveying on January 16, 2007 to the NAVD 88 datum by GPS observations.
†††	TOC elevations were surveyed by Mid Coast Engineers on August 18, 2008 to the NAVD 88 datum by GPS observations.
††††	TOC elevation was surveyed by Mid Coast Engineers on June 6, 2011 to the NAVD 88 datum by GPS observations.
†††††	TOC elevation was surveyed by Mid Coast Engineers on May 25, 2012 to the NAVD 88 datum by GPS observations.
††††††	TOC elevation was surveyed by Morrow Surveying on May 16, 2013 to the NAVD 88 datum by GPS observations.
†††††††	TOC elevation was surveyed by Morrow Surveying on July 1, 2013 to the NAVD 88 datum by GPS observations.
†††††††††	TOC elevation was surveyed by Morrow Surveying on February 6, 2015 to the NAVD 88 datum by GPS observations.

1	Analyzed by EPA Method 5030/8015M between 6/15/94 and 8/10/99, on 8/9/00, on 11/8/00, and between 2/13/02 and 2/18/03; by DHS LUFT between 11/9/99 and 5/18/00; on 2/14/01, and on 8/15/01; by EPA Method 8260B between 8/21/03 and the present.
2	Analyzed by EPA Method 5030/8020 between 6/15/94 and 8/10/99, on 8/9/00, and on 11/8/00; by DHS LUFT between 11/9/99 and 5/18/00, and on 2/14/01; by EPA Method 8021B between 2/13/02 and 2/18/03; by EPA Method 8260B between 8/21/03 and the present.
3	Analyzed by EPA Method 8020M between 3/8/96 and 8/10/99, on 8/9/00, and on 11/8/00; by DHS LUFT between 11/9/99 and 5/18/00, and on 2/14/01; by EPA Method 8021B between 2/13/02 and 2/18/03; by EPA Method 8260B between 8/21/03 and the present.
4	Analyzed by EPA Method 8260B.
5	Analyzed by EPA Method 8270C.

a	The presence of MTBE was potentially identified at reportable levels.
b	The presence of MTBE was identified at a level equal to or above the taste and odor threshold of 40 µg/L.
c	The hydrocarbons detected appeared to be gasoline and a non-gasoline mixture.
d	Chromatograph pattern: unidentified hydrocarbons C6-C12
e	Chromatograph pattern: weathered gasoline: C6-C12
f	Chromatograph pattern: discrete peaks C8-C12
g	Chromatograph pattern: discrete peaks
h	Sample was additionally run under EPA Method 8260B. MTBE was detected at 1,140 µg/L. All other analytes were non-detect.
i	Single analyte peak(s) were present in the requested fuel quantitation range. Fuel hydrocarbon pattern was not present.
j	The concentration reported reflect(s) individual or discrete unidentified peaks not matching a typical fuel pattern.
k	Reporting limits (PQL or MDL) were raised due to the high level of analyte present in the sample ("D4")
l	Detection limit raised due to sample dilution
m	Estimated value
n	Chromatogram not typical of gasoline.
o	The BC laboratory report indicated that reported concentration of 200 µg/L TPPH was due only to the presence of 90 µg/L PCE, 15 µg/L trichloroethane, and 9.8 µg/L cis-1,2-DCA; therefore, SECOR has represented the results for TPPH in this laboratory report as non-detect.
p	TPPH was positive due to PCE present in the sample.
q	PCE, TCE, and/or 1,2-DCE were subtracted from the gasoline range TPPH, or GRO.
r	Sample hold time was exceeded.
s	Not enough sample to re-run for PCE.
t	First run did not pass, sample had to be diluted due to not enough sample. Only one voa submitted to lab.
u	Depth to GW was collected on 9/28/2007 and sample was collected on 8/30/2007
v	Sample also analyzed for TPH-diesel (reported at a concentration of 28,000, with the chromatogram reporting a diesel and non-diesel mixture (<C16, >C22)
w	Result was positive due to PCE and TCE present in the sample.
x	Data from re-sampling event on 3/30/2010.
y	"L2" = Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results for this analyte in associated samples may be biased low.
z	"M0" = Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory reporting limits.
aa	"T4" = Result reported for hydrocarbons within the method-specific range that do not match pattern of laboratory standard.
bb	"1n" = The GRO result for this sample did not match the pattern of the laboratory standard for gasoline, likely due to the presence of PCE in the sample
cc	Primary compounds not found in typical gasoline
dd	"M1" = The matrix spike exceeded the laboratory's QC limits. The batch was accepted based on acceptable recovery from the laboratory control sample.
ee	samples also tested for full VOCs, refer to laboratory analytical report for full list of analytes and results.
ff	Sample also analyzed for organic lead (result was 'non-detect')
gg	Groundwater sample collected may represent casing water trapped in the well bottom.
S5	Surrogate recovery was outside control limits due to matrix interferences (not confirmed by re-analysis).
hh	The method reporting limit for ethanol has been increased due to the presence of an interfering compound.
ii	Repeat analysis of GRO yielded inconsistent results. The concentrations appear to vary between the bottles. The highest valid result is reported.
jj	Repeat analysis for TBA yielded inconsistent results. The concentrations appear to vary between the bottles. The highest valid result is reported.
kk	Original GRO testing indicated that the primary compounds were not found in typical gasoline. These values were recalculated under the 'Gasoline Hydrocarbon' parameter, calculated by adding up the chromatographic peaks between hexane and dodecan (C6 to C12), subtracting the non-gasoline compounds (primarily dichloroethene, Trichloroethene, and tetrachloroethene), and comparing against a gasoline calibration curve.

California Maximum Contaminant Limit (MCL):		**5.0**	**5.0**	**6.0**	**10**	**0.50**

Notes:

<	Not detected at or above the indicated laboratory reporting limit
--	Not analyzed/applicable/measured
	Results in bold exceed applicable action limits
	Italicized reporting limits exceed applicable action limits
µg/L	Micrograms per liter
PCE	Tetrachloroethylene
TCE	Trichloroethylene
DCE	Dichloroethene
VC	Vinyl chloride
EPA	U.S. Environmental Protection Agency
1	Analyzed by EPA Method 8260B.
a	Reporting limits (PQL or MDL) were raised due to the high level of analyte present in the sample ("D4")
b	Sample hold time was exceeded.
c	Data from re-sampling event on 3/30/2010.
d	"L2" = Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results for this analyte in associated samples may be biased low.
e	Groundwater sample collected may represent casing water trapped in the well bottom.
f	"M1" = The matrix spike exceeded the laboratory's QC limits. The batch was accepted based on acceptable recovery from the laboratory control sample.
S	Surrogate recovery was outside control limits due to matrix interferences (not confirmed by re-analysis).

Analytical Notes:
Results in bold exceed applicable action limits
-- - No information available
< = Not detected at or above the indicated laboratory reporting limit
mg/kg - milligrams/kilograms
1 Analyzed by EPA method 3550/8015M
2 Analyzed by Standard Method 5520 E&F (Gravimetric)
3 Analyzed by EPA Method 5030/8015 M between 8/1992 and 1/1996; by EPA Method 8260 between 12/2006 and the present
4 Analyzed by EPA Method 8020 between 8/1992 and 1/1996; by EPA Method 8260 between 12/2006 and the present
5 Analyzed by EPA Method 8260B
* Sample may not be representative of in-situ conditions because the boring was air knifed to a depth of 5 feet prior to sampling
b Chromatograph pattern: Deisel and non-deisel mixture (<C14; >C22).
d The Continuing Calibration Verification (CCV) recovery was not within established control limits.

DIPE Di-isopropyl ether
EDB Ethylene dibromide
EPA Environmental Protection Agency
ETBE Ethyl tertiary butyl ether
MTBE Methyl tertiary butyl ether
PQL Practical Quantitation Limit
TAME Tert-amyl methyl ether
TBA Tertiary butyl alcohol
TOG Total oil and grease
TPH-DRO Total petroleum hydrocarbons as diesel range organics
TPH-GRO Total petroleum hydrocarbons as gasonline range organics
1,2-DCA 1,2-Dichloroethane

TABLE 5
SUMMARY OF SOIL ANALYTICAL DATA
76 SERVICE STATION NO. 6390
402 SOUTH DELAWARE STREET
SAN MATEO, CA 94402

Sample I.D.	Date	Sample Depth (feet)	TPH-DRO[1] (mg/kg)	TOG[2] (mg/kg)	TPH-GRO[3] (mg/kg)	Benzene[4] (mg/kg)	Toluene[4] (mg/kg)	Ethylbenzene[4] (mg/kg)	Xylenes[4] (mg/kg)	1,2-DCA[5] (mg/kg)	DIPE[5] (mg/kg)	EDB[5] (mg/kg)	ETBE[5] (mg/kg)	Ethanol[5] (mg/kg)	MTBE[5] (mg/kg)	TBA[5] (mg/kg)	Naphthalene[5] (mg/kg)

e The PQL's and MDL's was raised due to sample dilution

f Estimated Value (CLP Flags)

g Surrogate recovery outside control limits due to matrix interferences (not confirmed by re-analysis). Noted on toulene-d8 (S) and 4-Bromofluorobenzene (S).

Analytical Notes:
Results in bold exceed applicable action limits
-- - No information available
< = Not detected at or above the indicated laboratory reporting limit
mg/kg - milligrams/kilograms
6 Analyzed by EPA Method 8010 in 8/1992; 8260B.

EPA	Environmental Protection Agenc
PQL	Practical Quantitation Limit
PCE	Tetrachloroethulene
TCE	Trichloroethylene
cis-1,2-DCE	cis-1,2-dichloroethylene

TABLE 6
SUMMARY OF ADDITIONAL SOIL ANALYTICAL DATA
76 SERVICE STATION NO. 6390
402 SOUTH DELAWARE STREET
SAN MATEO, CA 94402

Sample I.D.	Date	Sample Depth (feet)	PCE[6] (mg/kg)	TCE[6] (mg/kg)	cis-1,2-DCE[6] (mg/kg)	Chloroform[6] (mg/kg)	Vinyl chloride[6] (mg/kg)	Cadmium[7] (mg/kg)	Chromium[7] (mg/kg)	Nickel[7] (mg/kg)	Lead[7] (mg/kg)	Zinc[7] (mg/kg)

7 Analyzed by EPA Method 6000/7000.
* Sample may not be representative of in-situ conditions because the boring was air knifed to a depth of 5 feet prior to sampling
c Sample was analyzed for HVOCs by EPA Method 8010. All HVOCs were reported as non-detect.
g Surrogate recovery outside control limits due to matrix interferences (not confirmed by re-analysis). Noted on toulene-d8 (S) and 4-Bromofluorobenzene (S).
h Analyte recovery in the laboratory control sample (LCS) was below QC limits. Result may be biased low.
i Result confirmed by second analysis.

µg/L	Microgram per cubic liter	1,2- DCA	1,2- Dichloroethane	TBA	Tertiary butyl alcohol	MTBE	Methyl tertiary butyl ether		
*	Field Duplicate Sample	EDB	Ethylene dibromide	EPA	Environmental Protection Agency	PCE	Tetrachloroethene		

VOC analyses: 2007 Samples analyzed by TO-14A, 8/2013 and 1/2014 samples analyzed by TO-15, 2/2014 samples analyzed by TO-15 SIM
SS-1 through SS-4 are subslab vapor points.
Shallow gas screening levels taken from SF Bay RWQCB Table E-2
Sub-slab screening levels based on a 0.05 attenuation factor to indoor air.
Indoor Air Screening Level: Environmental Screening Level for Indoor Air Quality established by the San Francisco Regional Water Quality Control Board, Decemeber 2013
Carbon dioxide and methane atmospheric levels taken from http://cdiac.ornl.gov/pns/current_ghg.html
Oxygen and helium atmospheric levels taken from http://nssdc.gsfc.nasa.gov/planetary/factsheet/earthfact.html
Samples collected from SS-1, SS-2 and SS-3 on 1/14/14 are believed to have been compromised from outside contaminant source, data not used in interpretation.

EXPLANATION

- APPROXIMATE PROPERTY BOUNDARY
- FENCE
- APPROXIMATE EXTENT OF THE 1992 PRODUCT PIPING TRENCH
- MW-9 — GROUNDWATER MONITORING WELL MAXIMUM SCREEN DEPTH ≤ 21 ft. (76 STATION)
- MW-8(A) — SHALLOW GROUNDWATER MONITORING WELL (ARCO STATION)
- MW-2(E) — SHALLOW GROUNDWATER MONITORING WELL (ENDO AUTOMOTIVE)
- MW-4 — DEEP GROUNDWATER MONITORING WELL MAXIMUM SCREEN DEPTH > 21 ft
- S-1 MW-3 — DESTROYED GROUNDWATER MONITORING WELL (S = SHELL WELL)
- TW-1 — DESTROYED TEMPORARY MONITORING WELL
- SP-1 — SOIL BORING
- P4 — SOIL SAMPLE POINT
- W1 — WATER SAMPLE POINT
- VP-2 — SOIL VAPOR SAMPLING POINT
- SS-2 — SUB-SLAB VAPOR SAMPLING PROBE

NOTE: MW-4 IS SCREENED IN BOTH SHALLOW AND DEEP ZONES (7-27 ft/bgs)

STATE OF CALIFORNIA

KAPREALIAN ENGINEERING
INCORPORATED

MAJOR DIVISIONS	SYMBOLS		TYPICAL SOIL DESCRIPTIONS
GRAVELS (More than 1/2 of coarse fraction > No. 4 sieve size)	GW		Well graded gravels or gravel - sand mixtures, little or no fines
	GP		Poorly graded gravels or gravel - sand mixtures, little or no fines
	GM		Silty gravels, gravel - sand - silt mixtures
	GC		Clayey gravels, gravel - sand - clay mixtures
SANDS (More than 1/2 of coarse fraction < No. 4 sieve size)	SW		Well graded sands or gravelly sands, little or no fines
	SP		Poorly graded sands or gravelly sands, little or no fines
	SM		Silty sands, sand - silt mixtures
	SC		Clayey sands, sand - clay mixtures
SILTS & CLAYS LL < 50	ML		Inorganic silts and very fine sands, rock flour, silty or clayey fine sands or clayey silts with slight plasticity
	CL		Inorganic clays of low to medium plasticity, gravelly clays, sandy clays, silty clays, lean clays
	OL		Organic silts and organic silty clays of low plasticity
SILTS & CLAYS LL > 50	MH		Inorganic silts, micaceous or diatomaceous fine sandy or silty soils, elastic silts
	CH		Inorganic clays of high plasticity, fat clays
	OH		Organic clays of medium to high plasticity, organic silty clays, organic silts
HIGHLY ORGANIC SOILS	Pt		Peat and other highly organic soils

CLASSIFICATION CHART (Unified Soil Classification System)

BORING LOG

Project No. KEI-P92-0801	**Boring Diameter** 8.5" **Casing Diameter** 2"	**Logged By** JGG D.L. CEG/1633

Elevation:	22 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	37122-E3 SAN MATEO, CA
Version Date:	1999

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

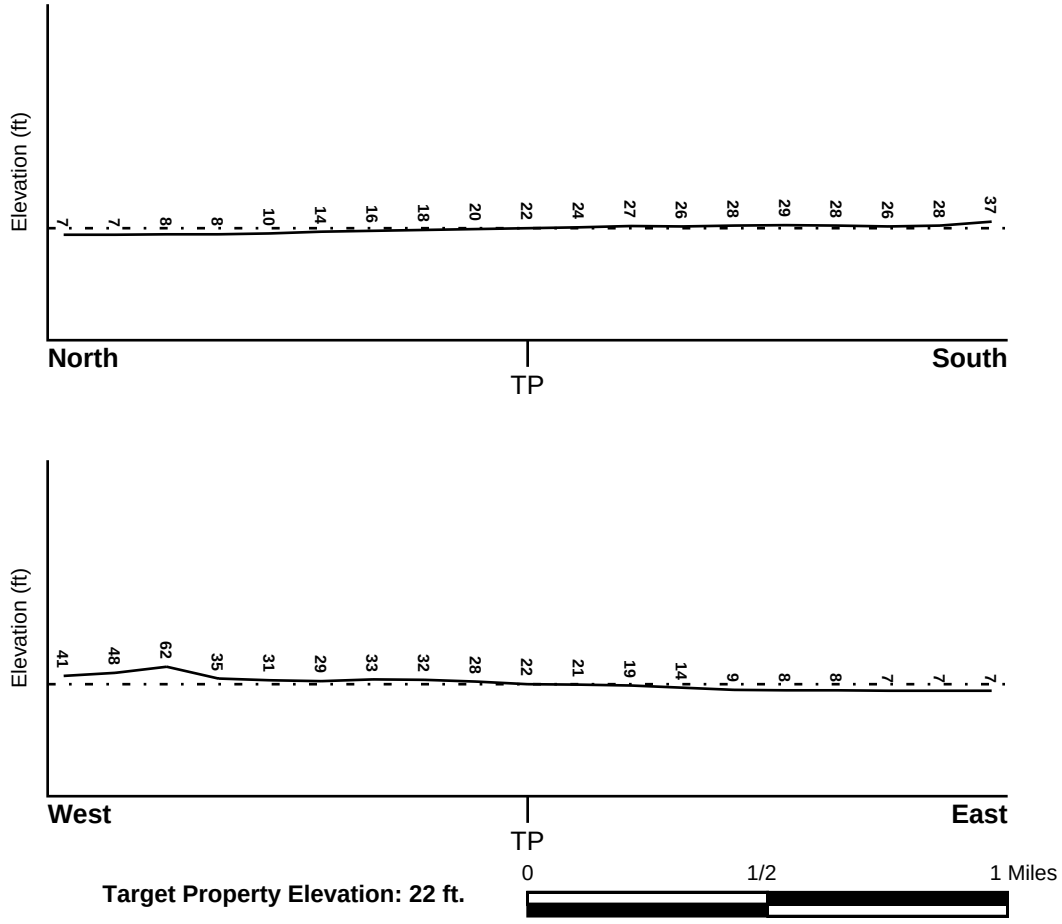
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ENE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 22 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
SAN MATEO, CA	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 0603280000B - FEMA Q3 Flood data

Additional Panels in search area: 0603200000B - FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
SAN MATEO	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: loam

Surficial Soil Types: loam

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: sandy clay loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish & Game
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779
Oil and Gas well locations in the state.

RADON

State Database: CA Radon
Source: Department of Health Services
Telephone: 916-324-2208
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

EXECUTIVE SUMMARY

A search of available records was conducted by Environmental Data Resources, Inc. (EDR). The EDR Offsite Receptor Report provides information which may be used to comply with the Clean Air Act Risk Management Program 112-R. *"The rule requires that you estimate in the RMP residential populations within the circle defined by the endpoint for your worst-case and alternative release scenarios (i.e., the center of the circle is the point of release and the radius is the distance to the endpoint). In addition, you must report in the RMP whether certain types of public receptors and environmental receptors are within the circles."*

The address of the subject property, for which the search was intended, is:

76 SERVICE STATION NO. 6390
402 SOUTH DELAWARE STREET
SAN MATEO, CA 94402

Distance Searched: 1.000 miles from subject property

RECEPTOR SUMMARY
An X indicates the presence of the receptor within the search radius.

Residential Population
Estimated population within search radius: 31563 persons.

RECORDS SEARCHED/DATA CURRENCY TRACKING

Census

Source: U.S. Census Bureau
Telephone: 301-763-4636
2010 U.S. Census data was used to estimate residential population following these EPA guidelines:
"Census data are presented by Census tract. If your circle covers only a portion of the tract, you should develop an estimate for that portion...Determine the population density per square mile (total population of the Census tract divided by the number of square miles in the tract) and apply that density figure to the number of square miles within your circle."

FED_LAND: Federal Lands

Source: USGS
Telephone: 888-275-8747
Federal lands data. Includes data from several Federal land management agencies, including Fish and Wildlife Service, Bureau of Land Management, National Park Service, and Forest Service. Includes National Parks, Forests, Monuments; . Wildlife Sanctuaries, Preserves, Refuges; Federal Wilderness Areas.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Well Status Inquiry Letter

Antea USA, Inc.
5910 Rice Creek Parkway, Suite 100
Shoreview, Minnesota 55126 USA
www.anteagroup.com

March 3, 2017

Binh Thai or current resident
216 South Eldorado Street
San Mateo, California 94402

SUBJECT: PROPERTY WELL EXISTENCE AND STATUS VERIFICATION

Dear Property Owner/Resident:

Antea®Group is an environmental consulting firm contracted to remediate and close the environmental release case for the 76-branded service station at 402 South Delaware Street in San Mateo, California located within 1,000 feet of your property. Through reports available on the State of California GeoTracker website (http://geotracker.waterboards.ca.gov/), Antea Group has information indicating there may be a water well on your property. As part of the process to make a case for closure with the State of California, Antea Group needs to verify the existence and use status of water wells within 1,000 feet of the referenced service station. This is a required part of the process and not an indication the historical release at the subject service station affected your property or water well.

The attached map shows the location of the service station in relation to your property. Please provide the information requested below in the space provided so we can demonstrate to the San Mateo County Groundwater Protection Program and the San Francisco Bay Regional Water Quality Control Board that Antea Group contacted for verification.

Please contact Allison Dagg at Antea Group at 408-652-7454 or allison.dagg@anteagroup.com if you have any quesitons or concerns regarding this questionnaire.

Questionnaire:

Property Information:
Street Address and Parcel: 216 South Eldorado Street **APN:** 034187030

Property Owner Information:
Name: Mr. Binh Thai
Address: 216 S Eldorado St.
City, State, Zip: San Mateo, CA 94401-3328
Telephone: 650 344 1024

Tenant Information (*if not Property Owner*):
Name: _____
Address: _____
City, State, Zip: _____
Telephone: _____

Is there a water well on the property? (please circle one): (Yes) No Unknown

Inogen Environmental Alliance

Back side too →

Did a well previously exist on the property? (please circle one): (Yes) No Unknown

If a well currently exists on the property:
Is the well currently being used? (please circle one): Yes (No)
How often?_____
How is the water used?_____

If a well previously existed on the property, was it removed or filled with cement? (please circle one):
Yes (No) Unknown

Please return this questionnaire in the enclosed self-addressed stamped envelope as soon as possible. Please include any comments you may have on the bottom of this page.

Sincerely,
Antea USA, Inc.

Additional Comments:
We would like to use the well water for our lawn and garden. Currently, the pump is not working but we plan on fixing that this spring/summer.

or Latitude ___ DEG. ___ MIN. ___ SEC. NORTH Longitude ___ DEG. ___ MIN. ___ SEC. WEST

LOCATION SKETCH

Illustrate or Describe Distance of Well from Landmarks such as Roads, Buildings, Fences, Rivers, etc.
PLEASE BE ACCURATE & COMPLETE.

ACTIVITY (✓)

X NEW WELL
MODIFICATION/REPAIR
___ Deepen
___ Other (Specify)
___ DESTROY *(Describe Procedures and Materials Under "GEOLOGIC LOG")*

PLANNED USE(S) (✓)

___ MONITORING
WATER SUPPLY
___ Domestic
___ Public
X Irrigation
___ Industrial
___ "TEST WELL"
___ CATHODIC PROTECTION
___ OTHER (Specify)

DRILLING METHOD Auger FLUID ___

WATER LEVEL & YIELD OF COMPLETED WELL

DEPTH OF STATIC WATER LEVEL 23 (Ft.) & DATE MEASURED 10/7/04
ESTIMATED YIELD* 40 (GPM) & TEST TYPE Pump
TEST LENGTH 4 (Hrs.) TOTAL DRAWDOWN 10 (Ft.)
** May not be representative of a well's long-term yield.*

CASING(S)

DEPTH FROM SURFACE Ft.	to Ft.	BORE-HOLE DIA. (Inches)	TYPE (✓) BLANK	SCREEN	CONDUCTOR	FILL PIPE	MATERIAL/GRADE	INTERNAL DIAMETER (Inches)	GAUGE OR WALL THICKNESS	SLOT SIZE IF ANY (Inches)
0	20	12	X				PVC	5"	F480	
20	120	12		X			PVC	5"	SDR26	.032
120	160	12	X				PVC	5"		
160	200	12		X			PVC	5"		.032

ANNULAR MATERIAL

DEPTH FROM SURFACE Ft.	to Ft.	TYPE CEMENT (✓)	BENTONITE (✓)	FILL (✓)	FILTER PACK (TYPE/SIZE)
0	20	X			
20	200				#3 Sand

ATTACHMENTS (✓)

___ Geologic Log
___ Well Construction Diagram
___ Geophysical Log(s)
___ Soil/Water Chemical Analyses
___ Other ___

ATTACH ADDITIONAL INFORMATION, IF IT EXISTS.

CERTIFICATION STATEMENT

I, the undersigned, certify that this report is complete and accurate to the best of my knowledge and belief.

NAME Garcia Well & Pump Co. (PERSON, FIRM, OR CORPORATION) (TYPED OR PRINTED)

SAN MATEO COUNTY GROUNDWATER PROTECTION PROGRAM
CASE CLOSURE MEMORANDUM

TO: File

FROM: Groundwater Protection Program (GGP) Staff

DATE: March 27, 2018

SUBJECT: SMCo. LUFT Case #110069 / RO534
APN: 034-186-110
UNOCAL STATION #6390
402 SOUTH. DELAWARE STREET
SAN MATEO, CA 94401

SITE DESCRIPTION

The subject site is located on the southern corner of the intersection of E. Fourth Avenue and South Delaware Street in San Mateo, California, approximately 2,000 feet southwest of Highway 101 (Figures 1 and 2). The site is currently a 76-branded service station. The product storage and dispensing facilities consist of two 12,000-underground gasoline storage tanks (USTs), one 550-gallon waste oil UST, three dispenser islands, and associated piping (Figure 2).

The property is owned by the Linda B. Spady Trust and leased by Platinum Energy. The parcels immediately west, northwest, north, and northeast of the site are used for commercial purposes. Those immediately east and south of the service station are used for residential purposes. An office complex is adjacent to the southeast edge of the site.

LOCAL AND REGIONAL HYDROGEOLOGY

The subject site is approximately 20 feet above North American Vertical Datum-1988. Drilling logs indicate the underlying soils consist of sand and gravel interbedded with silt and lesser amounts of clay to a depth of approximately 40 feet below grade (fbg; maximum depth drilled). Silt was generally reported within 5 feet of grade.

The site is in the San Mateo Plain sub-basin of the Santa Clara Valley groundwater basin according to the Water Quality Control Plan prepared by the Regional Water Quality Control Board (RWQCB). Groundwater in this sub-basin is designated beneficial for municipal and industrial uses and potentially beneficial for agricultural uses.

Monitoring well gauging data collected since 1994 indicate depth to groundwater has fluctuated between approximately 7 and 21 fbg (commonly approximately 11 to 17 fbg). Groundwater gradient direction has predominantly been reported toward the east. Two residential irrigation wells were reported between 700 and 1,000 feet north and northeast of the site and a September 2008 report identified numerous basements above the eastern limits of the gasoline plume. The nearest surface water body is San Mateo Creek approximately 1,200 feet north of the site.

FUEL RELEASE IDENTIFICATION

The super unleaded gasoline UST (southeastern fuel UST) failed a tank integrity test in June 1992. Two 12,000-gallon gasoline USTs and associated piping and one 550-gallon waste oil UST were subsequently replaced in August 1992. A crack was reported in the eastern end of the super unleaded UST and two holes were reported in the waste oil UST (the crack in the fuel UST was reportedly caused by subsurface drilling). Soil samples collected during UST and line replacement activities removal contained up to 5,000 mg/kg of TPH-gas and 47 mg/kg of benzene (Sample B2; refer to Figure 3 and Table 1). Therefore, GPP staff, in a letter dated August 11, 1992, named Unocal Corporation as the party responsible for assessing and remediating the unauthorized release to the extent necessary to protect human health, environment, and water quality.

Figures 2 through 6 show the location of investigative samples. The laboratory results from the analysis of soil, groundwater, and subsurface vapor samples are listed on Tables 1 through 3.

JUSTIFICATION FOR CASE CLOSURE

It appears the subject site satisfies the criteria specified in the State Water Resources Control Board's Low-Threat UST Case Closure Policy (LTCP).

General LTCP Criteria

a) **The unauthorized release is located within the service area of a public water system.**

   Yes. Public water is supplied by California Water Supply (Bayshore District)

b) **The unauthorized release consists only of petroleum.**

   Yes. The release consists of gasoline. The chlorinated solvent concentrations detected in soil and groundwater samples appears to have originated from an offsite source.

c) **The unauthorized ("primary") release from the UST system been stopped.**

   Yes. The product piping and the waste oil and gasoline USTs were replaced in 1992.

d) **Free product has been removed to the maximum extent practicable.**

   Yes. Free product was observed floating on groundwater within the fuel UST cavity during 1992 tank removal. Approximately 5,800 gallons of this groundwater/free product mixture was removed and the northeast half of the fuel UST cavity was excavated to approximately 22 fbg. These activities appear to have removed free product to extent practicable because product was not reported in subsequent monitoring wells.

e) **A conceptual site model that assesses the nature, extent, and mobility of the release been developed.**

   Yes. Gasoline released from the super unleaded gasoline UST directly impacted groundwater because the gasoline USTs were surrounded by permeable sand or pea gravel to a depth approximating the depth to groundwater. The removal and disposal of this

backfill during UST replacement activities removed most of the impact to unsaturated zone soil. Significant residual hydrocarbon impact remains within the smear zone immediately east and southeast of the fuel UST cavity and under South Delaware Street. The soil sampling results from the boring drilled for Monitoring Well MW-13B suggest the vertical extent of this residual impact is assessed and between approximately 13 and 24 fbg.

The lateral extent of TPH-gas in groundwater extends approximately 300 to 400 feet downgradient (east) of the fuel UST cavity and the dissolved-phase benzene plume extends 150 to 200 feet east of the fuel UST cavity based on the laboratory analysis of groundwater samples collected from the surrounding borings and wells (Figures 5 and 6; MTBE is no longer considered a substance of significant concern). The trend in the hydrocarbon concentrations reported in the groundwater samples suggests the gasoline plume is stable to shrinking.

The laboratory results from the analysis of the subsurface vapor samples collected from onsite vapor sampling wells VP-1 through VP-3 were below the threshold concentrations listed in Appendix 4 of the LTCP. The LTCP excludes operating service stations from vapor intrusion evaluation and the results from SV-1 do not suggest an unusual vapor condition.

The laboratory results from the analysis of the offsite vapor samples collected from sub-slab vapor sampling probes SS-1 through SS-4 were below current Environmental Screening Levels (ESLs) established by the RWQCB for gasoline constituents in sub-slab vapor. The dissolved-phase benzene concentrations reported in downgradient groundwater samples collected from MW-21 and MW-12B were below the threshold concentrations listed in Appendix 3 of the LTCP.

f) Secondary source been removed to the extent practicable.

Yes. Excavation of the northeast half of the gasoline UST cavity to approximately 22 fbg appears to have removed secondary source to the extent practicable.

g) Soil or groundwater been tested for MTBE and results reported in accordance with Health and Safety Code Section 25296.15.

Yes.

h) A nuisance condition, as defined by Water Code section 13050, does not exist.

No nuisance conditions were identified.

i) Any unique site attributes or site-specific conditions that demonstrably increase the risk associated with residual petroleum constituents.

No unique attributes were identified.

LTCP Media Specific Criteria - Groundwater

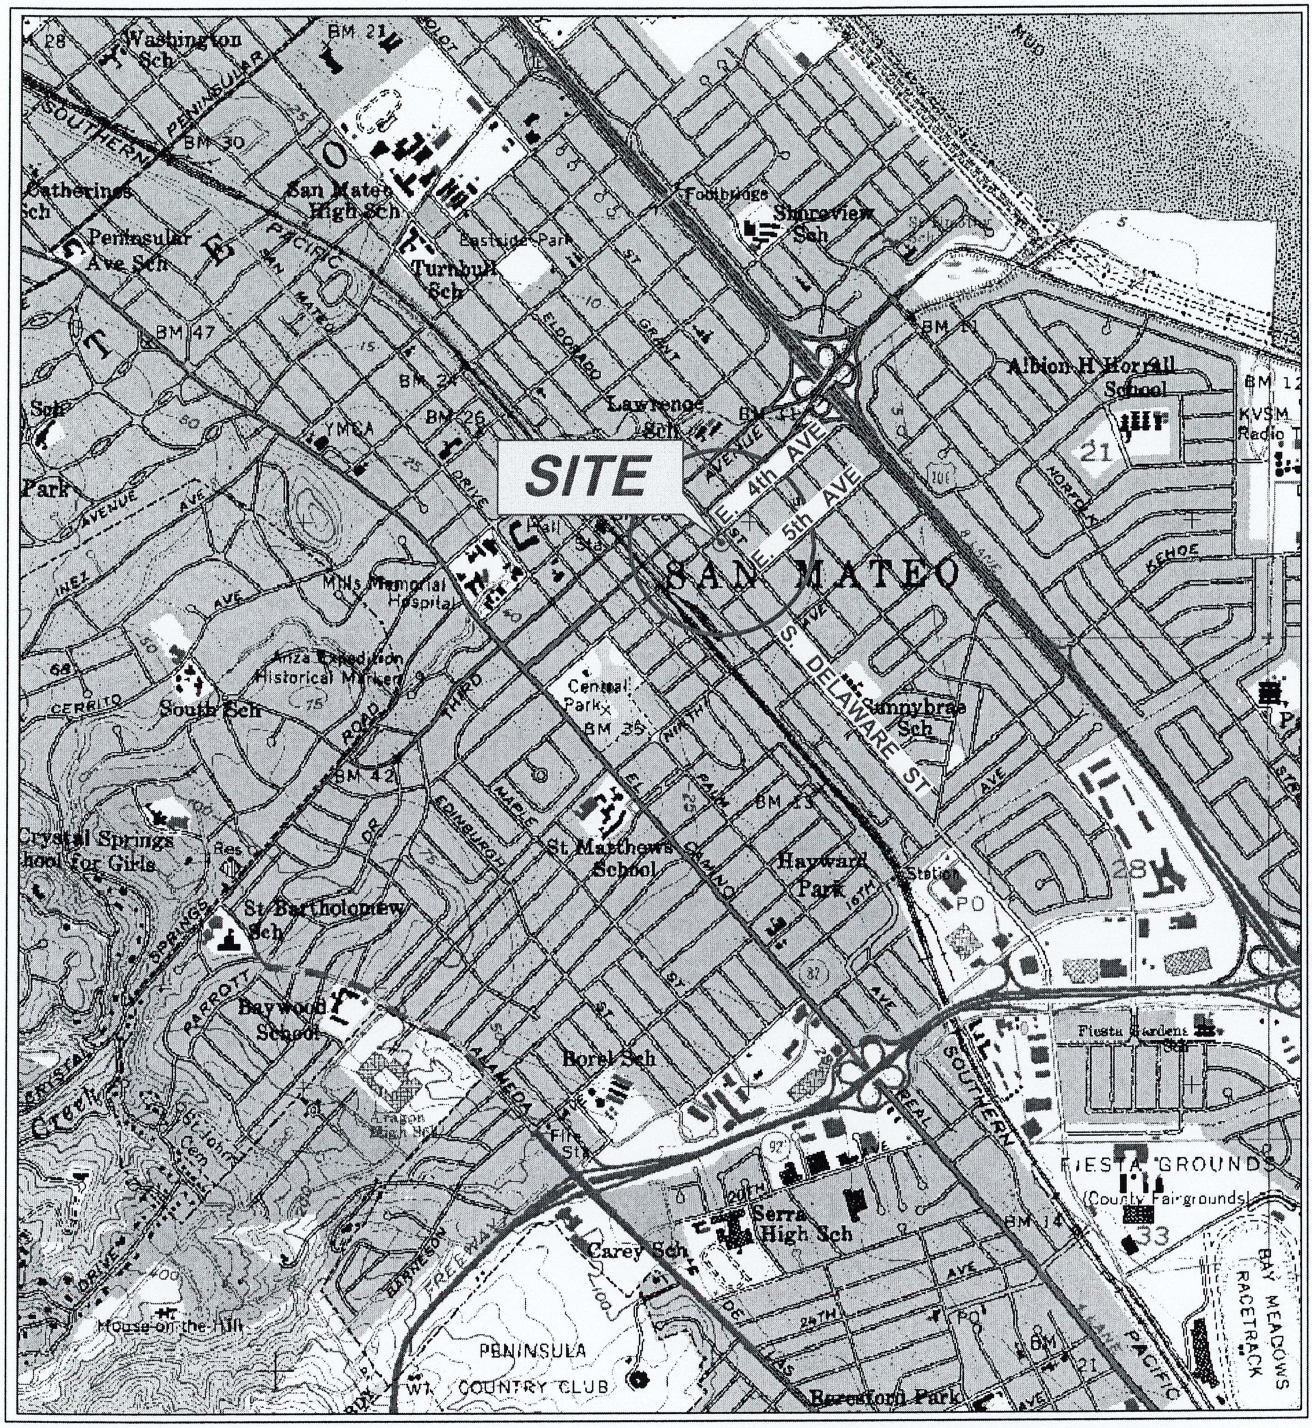
It appears the residual hydrocarbon plume extends approximately 300 to 400 feet from the source area. However, the groundwater conditions at the subject site do not satisfy the criteria for Class 4 of LTCP because the residual benzene concentrations in groundwater exceed 1,000 ug/l (MW-6 and potentially SB-7 and SB-9) and two residential irrigation wells were identified between 700 and 1,000 feet north and northeast of the site. That said, the lateral extent of the benzene exceedance in groundwater appears limited to the immediate vicinity of the fuel UST cavity, the dissolved-phase plume is stable and not directed toward the residential wells, and the residential wells do not likely generate a large cone of depression. Therefore, GPP consider groundwater conditions suitable for closure under Class 5 of the LTCP.

LTCP Media Specific Criteria – Petroleum Vapor Intrusion to Indoor Air

The LTCP does not consider it necessary to evaluate vapor intrusion risk at operating service stations unless unique conditions are identified. The subsurface vapor sampling results from wells VP-1 through VP-3 were below the threshold concentrations listed in of Appendix 4 of the LTCP and do not suggest a unique condition is present.

The benzene, ethylbenzene, and naphthalene concentrations reported in the sub-slab vapor samples collected from offsite SS-1 through SS-4 were below the ESLs established by the RWQCB for sub-slab vapor. In addition, the downgradient dissolved-phase benzene concentrations in the groundwater samples collected from MW-21 and MW-12B were below the threshold concentrations listed in Appendix 3 of the LTCP. Therefore, no significant vapor intrusion risk appears to exist to the occupants of the adjacent commercial building (SS-1 and SS-2) and downgradient residents (SS-3 and SS-4 and the residents with downgradient basements).

LTCP Media Specific Criteria – Direct Contact and Outdoor Air Exposure



No soil samples collected within 10 feet of ground surface and outside the limits of the fuel UST cavity contained benzene, ethylbenzene, or naphthalene in concentrations exceeding the commercial use direct contact and outdoor air thresholds listed on Table 1 of the LTCP. The soil backfill in the fuel UST cavity is not a concern because it was transported to a disposal facility.

RECOMMENDATIONS

Based on investigative findings and other information known to GPP staff, it appears LTCP criteria have been satisfied, residual dissolved-phase hydrocarbons will naturally degrade to RWQCB Water Quality Objectives within a reasonable time, and the waters of the State have not been significantly impacted. Therefore, all appropriate response actions appear complete and further investigation, remedial/removal actions, or monitoring of the release does not appear warranted.

1 Analyzed by EPA Method 3550/8015M
2 Analyzed by Standard Method 5520 E&F (Gravimetric)
3 Analyzed by EPA Method 5030/8015M between 8/1992 and 1/1996; by EPA Method 8260 between 12/2006 and the present.
4 Analyzed by EPA Method 8020 between 8/1992 and 1/1996; by EPA Method 8260 between 12/2006 and the present.
5 Analyzed by EPA Method 8260B
6 Analyzed by EPA Method 8010 in 8/1992; 8260B
7 Analyzed by EPA Method 6000/7000
* Sample may not be representative of in-situ conditions because the boring was air knifed to a depth of 5 feet prior to sampling
a Sample was analyzed for Halogenated Volatile Organic Hydrocarbons (HVOCs) by EPA Method 8010. Tetrachloroethene was detected at 6.4 parts per billion and converted to mg/kg. All remaining constituents analyzed by 8010 were non-detect
b Chromatograph pattern: Diesel and non-diesel mixture (<C14; >C22).
c Sample was analyzed for HVOCs by EPA Method 8010. All HVOCs were reported as non-detect.
d The Continuing Calibration Verification (CCV) recovery was not within established control limits.
e The PQL'S and MDL's was raised due to sample dilution.
f Estimated Value (CLP Flags)
g Surrogate recovery outside control limits due to matrix interferences (not confirmed by re-analysis). Noted on toluene-d8 (S) and 4-Bromofluorobenzene (S
h Analyte recovery in the laboratory control sample (LCS) was below QC limits. Result may be biased low
i Result confirmed by second analysis

--	Not analyzed/applicable/measured							GW	Groundwater			BTEX	Benzene, toluene, ethylbenzene, xylenes				PCE	Tetrachloroethylene				
CRWQCB	California Regional Water Quality Control Board							GWE	Groundwater Elevation			MTBE	Methyl tert-butyl ether				TCE	Trichloroethylene				
ESLs	Environmental Screening Levels							NAPL	Non-aqueous phase liquid			TBA	Tert-butyl alcohol									
EPA	U.S. Environmental Protection Agency							µg/L	micrograms per liter			TAME	Tert-amyl methyl ether									
QCTB & TB1	Trip blank samples for quality control							mg/L	milligrams per liter													
♦	The elevations were surveyed relative to mean sea level, per the City of San Mateo Benchmark #33-2 (elevation = 17.65 feet amsl)																					
†	TOC elevations were surveyed by Morrow Surveying on August 13, 2005 to the NAVD 88 datum by GPS observations.																					
††	TOC elevations were surveyed by Morrow Surveying on January 16, 2007 to the NAVD 88 datum by GPS observations.																					
†††	TOC elevations were surveyed by Mid Coast Engineers on August 18, 2008 to the NAVD 88 datum by GPS observations.																					
††††	TOC elevation was surveyed by Mid Coast Engineers on June 6, 2011 to the NAVD 88 datum by GPS observations.																					
†††††	TOC elevation was surveyed by Mid Coast Engineers on May 25, 2012 to the NAVD 88 datum by GPS observations.																					
††††††	TOC elevation was surveyed by Morrow Surveying on May 16, 2013 to the NAVD 88 datum by GPS observations.																					
†††††††	TOC elevation was surveyed by Morrow Surveying on July 1, 2013 to the NAVD 88 datum by GPS observations.																					
††††††††	TOC elevation was surveyed by Morrow Surveying on February 6, 2015 to the NAVD 88 datum by GPS observations.																					
1	Analyzed by EPA Method 5030/8015M between 6/15/94 and 8/10/99, on 8/9/00, on 11/8/00, and between 2/13/02 and 2/18/03; by DHS LUFT between 11/9/99 and 5/18/00; on 2/14/01, and on 8/15/01; by EPA Method 8260B between 8/21/03 and the present.																					
2	Analyzed by EPA Method 5030/8020 between 6/15/94 and 8/10/99, on 8/9/00, and on 11/8/00; by DHS LUFT between 11/9/99 and 5/18/00, and on 2/14/01; by EPA Method 8021B between 2/13/02 and 2/18/03; by EPA Method 8260B between 8/21/03 and the present.																					
3	Analyzed by EPA Method 8020M between 3/8/96 and 8/10/99, on 8/9/00, and on 11/8/00; by DHS LUFT between 11/9/99 and 5/18/00, and on 2/14/01; by EPA Method 8021B between 2/13/02 and 2/18/03; by EPA Method 8260B between 8/21/03 and the present.																					
4	Analyzed by EPA Method 8260B.																					
5	Analyzed by EPA Method 8270C.																					
a	The presence of MTBE was potentially identified at reportable levels.																					
b	The presence of MTBE was identified at a level equal to or above the taste and odor threshold of 40 µg/L.																					
c	The hydrocarbons detected appeared to be gasoline and a non-gasoline mixture.																					
d	Chromatograph pattern: unidentified hydrocarbons C6-C12																					
e	Chromatograph pattern: weathered gasoline: C6-C12																					
f	Chromatograph pattern: discrete peaks C8-C12																					
g	Chromatograph pattern: discrete peaks																					
h	Sample was additionally run under EPA Method 8260B. MTBE was detected at 1,140 µg/L. All other analytes were non-detect.																					
i	Single analyte peak(s) were present in the requested fuel quantitation range. Fuel hydrocarbon pattern was not present.																					
j	The concentration reported reflect(s) individual or discrete unidentified peaks not matching a typical fuel pattern.																					
k	Reporting limits (PQL or MDL) were raised due to the high level of analyte present in the sample ("D4")																					
l	Detection limit raised due to sample dilution																					
m	Estimated value																					
n	Chromatogram not typical of gasoline.																					
o	The BC laboratory report indicated that reported concentration of 200 µg/L TPPH was due only to the presence of 90 µg/L PCE, 15 µg/L trichloroethane, and 9.8 µg/L cis-1,2-DCA; therefore, SECOR has represented the results for TPPH in this laboratory report as non-detect.																					
p	TPPH was positive due to PCE present in the sample.																					
q	PCE, TCE, and/or 1,2-DCE were subtracted from the gasoline range TPPH, or GRO.																					
r	Sample hold time was exceeded.																					
s	Not enough sample to re-run for PCE.																					
t	First run did not pass, sample had to be diluted due to not enough sample. Only one voa submitted to lab.																					
u	Depth to GW was collected on 9/28/2007 and sample was collected on 8/30/2007																					
v	Sample also analyzed for TPH-diesel (reported at a concentration of 28,000, with the chromatogram reporting a diesel and non-diesel mixture (<C16, >C22)																					
w	Result was positive due to PCE and TCE present in the sample.																					
x	Data from re-sampling event on 3/30/2010.																					
y	"L2" = Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results for this analyte in associated samples may be biased low.																					
z	"M0" = Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory reporting limits.																					
aa	"T4" = Result reported for hydrocarbons within the method-specific range that do not match pattern of laboratory standard.																					
bb	"1n" = The GRO result for this sample did not match the pattern of the laboratory standard for gasoline, likely due to the presence of PCE in the sample																					
cc	Primary compounds not found in typical gasoline																					
dd	"M1" = The matrix spike exceeded the laboratory's QC limits. The batch was accepted based on acceptable recovery from the laboratory control sample.																					
ee	samples also tested for full VOCs, refer to laboratory analytical report for full list of analytes and results.

antea group

Sample ID	As - Built Screen Interval (ft below TOC)	TOC Elevation (feet)	Date Sampled	Depth to GW (ft below TOC)	GWE (feet)	GWE Change (feet)	NAPL Thickness (feet)	Sheen	GRO [1] (µg/L)	BTEX [2]				MTBE [3] (µg/L)	TBA [4] (µg/L)	TAME [4] (µg/L)	1,2-DCA [4] (µg/L)	DIPE [4] (µg/L)	ETBE [4] (µg/L)	Ethanol [4] (µg/L)	EDB [4] (µg/L)	Naphthalene [5] (µg/L)
										Benzene (µg/L)	Toluene (µg/L)	Ethylbenzene (µg/L)	Xylenes (µg/L)									

ff Sample also analyzed for organic lead (result was 'non-detect')
gg Groundwater sample collected may represent casing water trapped in the well bottom.
S5 Surrogate recovery was outside control limits due to matrix interferences (not confirmed by re-analysis).
hh The method reporting limit for ethanol has been increased due to the presence of an interfering compound.
ii Repeat analysis of GRO yielded inconsistent results. The concentrations appear to vary between the bottles. The highest valid result is reported.
jj Repeat analysis for TBA yielded inconsistent results. The concentrations appear to vary between the bottles. The highest valid result is reported.
kk original GRO testing indicated that the primary compounds were not found in typical gasoline. These values were recalculated under the 'Gasoline Hydrocarbon' parameter, calculated by adding up the chromatographic peaks between hexane and dodecan (C6 to C12), subtracting the non-gasoline compounds (primarily dichloroethene, Trichloroethene, and tetrachloroethene), and comparing against a gasoline calibration curve.

Analytical data prepared by Sequoia Analytical between 6/15/94 and 2/18/04; by Severn Trent Laboratories between 8/21/03 and 3/01/06; by BC Laboratories between 8/02/06 and 7/30/09, and by Pace Analytical / Kiff Analytical between 1/18/10 and the present.

City of San Mateo
330 West 20th Avenue
San Mateo, CA 94403

SUBJECT: UNOCAL 76 STATION #6390 AT 402 SOUTH DELAWARE STREET, SAN MATEO, CALIFORNIA

Dear Ms. Kojayan:

The attached case closure letter was prepared by San Mateo County Groundwater Protection Program (GPP) staff with tacit approval from Regional Water Quality Control Board staff. Although case closure was granted, petroleum-affected soil and groundwater remain east and southeast of the underground fuel tank storage cavity and beneath S, Delaware Street. This petroleum does not appear to pose a significant risk to public health or the environment under existing land use. However, a change in land use or the removal of soil and groundwater near these areas may create a risk and generate materials requiring special handling and disposal. Therefore, in accordance with Government Code Section 65850.2, please notify GPP staff of any future changes in land use or planned removal of soil or groundwater from this area so we can evaluate whether additional actions are necessary to protect public health and the environment. Our time to evaluate the potential impact of the proposed action(s) on public health and environment may be billed to the entity responsible for the proposed work.

Thank you for your cooperation. Please contact me at (650) 372-6292 or at dmilano@smcgov.org if you have any questions.

Sincerely,

Deno G. Milano, PG
Hazardous Materials Specialist
Groundwater Protection Program

SUBJECT: UNOCAL 76 STATION #6390 AT 402 SOUTH DELAWARE STREET, SAN MATEO, CALIFORNIA

Dear Mr. Bishop:

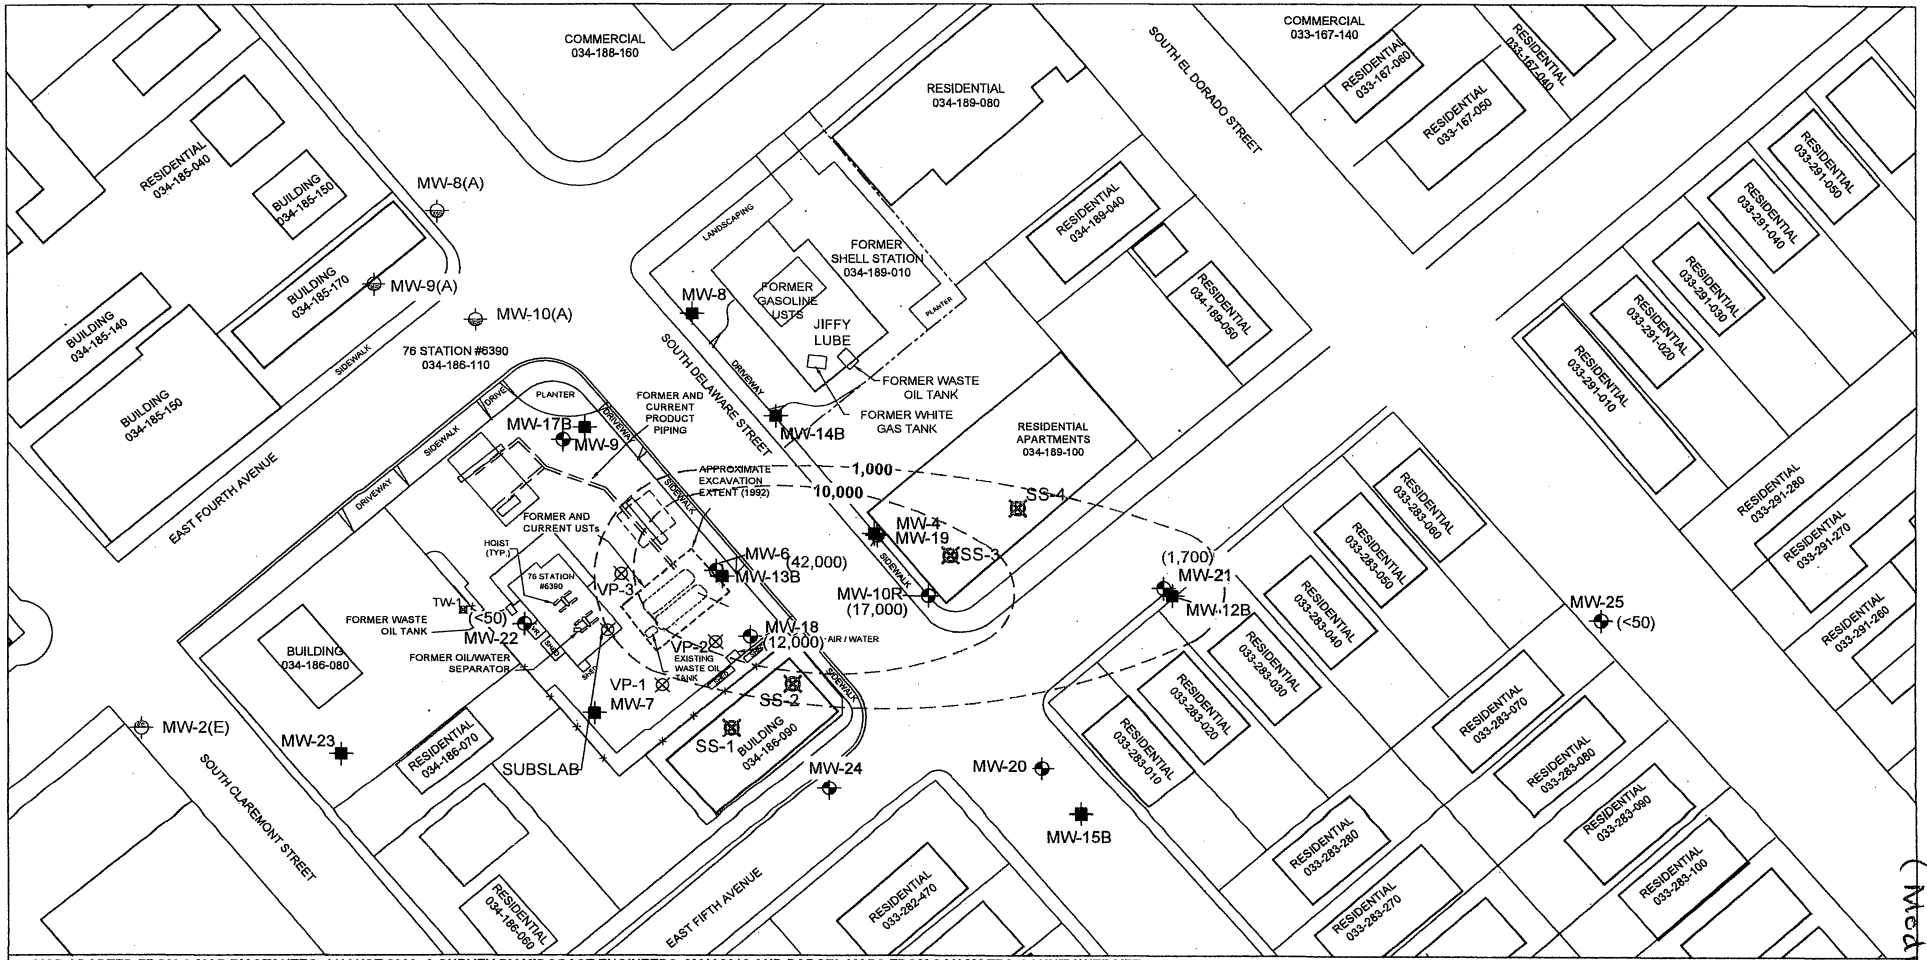
This letter confirms the completion of a site investigation and corrective action for the underground storage tank(s) formerly located at the above-described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the former underground storage tank(s) are greatly appreciated.

Based on the information in the above-referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, this agency finds that the site investigation and corrective action carried out at your underground storage tank(s) site is in compliance with the requirements of subdivisions (a) and (b) of Section 25296.10 of the Health and Safety Code and with corrective action regulations adopted pursuant to Section 25299.3 of the Health and Safety Code and that no further action related to the petroleum release(s) at the site is required.

Please note, claims for reimbursement of corrective action costs submitted to the Underground Storage Tank Cleanup Fund more than 365 days after the date of this letter or issuance or activation of the Fund's Letter of Commitment, whichever occurs later, will not be reimbursed unless one of the following exceptions applies:

- Claims are submitted pursuant to subdivision (k) of Section 25299.57 of the Health and Safety Code (reopened UST case); or
- Submission within the timeframe was beyond the claimant's reasonable control, ongoing work is required for closure that will result in the submission of claims beyond that time period, or that under the circumstances of the case, it would be unreasonable or inequitable to impose the 365-day time period.

This notice is issued pursuant to subdivision (g) of Section 25296.10 of the Health and Safety Code and Assembly Bill 358. Please contact Deno Milano of our office if you have any questions. He can



be reached at 650-372-6292 (direct), 650-372-6200 (main), or at dmilano@smcgov.org on Monday through Thursday (excluding holidays).

Sincerely,

Heather Forshey

SAN MATEO COUNTY CASE CLOSURE SUMMARY
LEAKING UNDERGROUND FUEL STORAGE TANKS PROGRAM

Agency Information

Agency Name: San Mateo County	Address: 2000 Alameda de las Pulgas, Suite 100
City/State/Zip: San Mateo, CA 94403	Phone: (650) 372-6292
Staff Person: Deno Milano	Title: Hazardous Materials Specialist III

Case Information:

Facility Name: Unocal Station #6390		
Facility Address: 402 S. Delaware Street, San Mateo, CA 94401		
RB LUSTIS Case No: 41-0665	Local Case No.: 110069	APN: 034-186-110
URF Filing Date: 9/10/1992	GeoTracker No.: T0608100632	
Responsible Party(s): Unocal Corporation c/o Brett Hunter	Address: 6001 Bollinger Canyon Road, Ste C2112 San Ramon, CA 94583	Phone: (925) 842-1919

Tank Information

Tank No.	Size (gallons)	Contents	Closed in-Place/ Removed/Active	Date
1	550	Waste Oil	Removed	August 1992
2	12,000	Gasoline	Removed	August 1992
3	12,000	Gasoline	Removed	August 1992

Additional Information:

Hydrocarbon-affected soil and groundwater remain east and southeast of the fuel UST cavity and beneath South Delaware Street. Therefore, GPP staff will request the City of San Mateo to notify the San Mateo County Environmental Health Division if a change in land use or removal of soil or groundwater is planned in these areas.

CLOSURE POLICY

THIS VERSION IS FINAL AS OF 3/27/2018

CHECKLIST INITIATED ON 1/24/2013

CLOSURE POLICY HISTORY

General Criteria - *The site satisfies the policy general criteria* * CLEAR SECTION ANSWERS — **YES**

a. Is the unauthorized release located within the service area of a public water system? — ◉ YES ○ NO

Name of Water System : California Water Service Company

b. The unauthorized release consists only of petroleum (info). — ◉ YES ○ NO

c. The unauthorized ("primary") release from the UST system has been stopped. — ◉ YES ○ NO

d. Free product has been removed to the maximum extent practicable (info). — ○ FP Not Encountered ◉ YES ○ NO

e. A conceptual site model that assesses the nature, extent, and mobility of the release has been developed (info). — ◉ YES ○ NO

f. Secondary source has been removed to the extent practicable (info). — ◉ YES ○ NO

g. Soil or groundwater has been tested for MTBE and results reported in accordance with Health and Safety Code Section 25296.15. — ○ Not Required ◉ YES ○ NO

h. Does a nuisance exist, as defined by Water Code section 13050. — ○ YES ◉ NO

1. Media-Specific Criteria: Groundwater - *The contaminant plume that exceeds water quality objectives is stable or decreasing in areal extent, and meets all of the additional characteristics of one of the five classes of sites listed below.* - CLEAR SECTION ANSWERS — **YES**

EXEMPTION - Soil Only Case (Release has not Affected Groundwater - Info) — ○ YES ◉ NO

Does the site meet any of the Groundwater specific criteria scenarios? — ◉ YES ○ NO

1.5 - The regulatory agency determines, based on an analysis of site specific conditions, that the site under current and reasonably anticipated near-term future scenarios, the contaminant plume poses a low threat to human health and safety and to the environment and water quality objectives will be achieved within a reasonable time frame. — ◉ YES ○ NO

2. Media Specific Criteria: Petroleum Vapor Intrusion to Indoor Air - *The site is considered low-threat for the vapor-intrusion-to-air pathway if site-specific conditions satisfy items 2a, 2b, or 2c* - CLEAR SECTION ANSWERS — **YES**

EXEMPTION - Active Commercial Petroleum Fueling Facility — ◉ YES ○ NO

3. Media Specific Criteria: Direct Contact and Outdoor Air Exposure - *The site is considered low-threat for direct contact and outdoor air exposure if it meets 1, 2, or 3 below.* - CLEAR SECTION ANSWERS — **YES**

EXEMPTION - The upper 10 feet of soil is free of petroleum contamination — ○ YES ◉ NO

Does the site meet any of the Direct Contact and Outdoor Air Exposure criteria scenarios? — ◉ YES ○ NO

3(a) - Maximum concentrations of petroleum constituents in soil are less than or equal to those listed in the following table (LINK) for the specified depth below ground surface. — ◉ YES ○ NO

Additional Information

This case should be kept OPEN in spite of meeting policy criteria. — ○ YES ◉ NO

Has this LTCP Checklist been updated for FY 17/18? — ◉ YES ○ NO

SUBJECT: UNOCAL 76 STATION #6390 AT 402 SOUTH DELAWARE STREET, SAN MATEO, CALIFORNIA

Dear Mr. Bishop:

Antea Group uploaded to the State GeoTracker database (GeoTracker) a well destruction report dated July 30, 2019. The following comments are based on San Mateo County Groundwater Protection Program (GPP) staff review of the report and the project file.

The report recommends not re-destroying MW-4 by over-drilling even though the well only received approximately 58% of the required grout volume. GPP staff previously approved this recommendation on June 10, 2019, because the field crew confirmed the presence of a sewer lateral immediately adjacent to this well. Therefore, no additional approval is required.

The registered professional proposes that sub-slab vapor probes SS-1 and SS-2 be considered destroyed. Insufficient information was provided to demonstrate these probes were likely destroyed. However, the operations at the subject site do not appear responsible for the tetrachloroethene reported in the sub-slab vapor samples from SS-1 and SS-2. Therefore, GPP staff will not require removal of these probes as a condition of closure for the leaking underground fuel tank (LUFT) case.

The right two columns in Table 2 ("Grout Used in Well" and "Water Used in Well") and the same titled columns in Table 3 are not necessary and may confuse the reader (e.g. Table 2 indicates the gallons of grout used in the well generally equaled the amount of cement bags used for the well). Please consider not including these two columns of information in future well destruction reports. The important variables are the size and number of cement bags used to grout each well, gallons of water used to mix the cement, and the resulting total gallons of the cement/water mixture (grout) added to each well.

Table 3 indicates over-drilled well MW-9 only received approximately 75% of the estimated volume of grout required. However, it appears an additional one or two sacks of dry cement not included in the reported volume were used to grout this well due to potential heaving sand conditions. No explanation was provided as to methods used to ensure proper grouting of this well was achieved. Please note, the volume of grout used in an over-drilled well should closely approximate the estimated

volume required because borehole depth and diameter are known. The 30% variance listed in our June 2019 email only applies to pressure grouting and only because filter packs contain varying amounts of silt. In the future, please fully describe and justify any alterations to standard grouting procedures to avoid the need to over-drill potentially improperly grouted borings or wells.

Closing Comments

Table 2 did not identify whether the cement bags used weighed 47- or 94-pounds and the driller project field bills in Appendix E did not identify the field point name of the well destroyed. GPP staff were able to determine this information using other lines of evidence. However, please ensure this information is provided in future well destruction reports.

Please contact me at 650-372-6292 (direct), 650-372-6200 (main), or at dmilano@smcgov.org on Monday through Thursday (excluding holidays) if you have any questions.

Sincerely,

1.0 Introduction

Antea®Group has prepared this *Well Destruction Report* for 76 Service Station No. 6390 at 402 South Delaware Street, San Mateo, California (**Figure 1**). This report documents the proper destruction of the groundwater monitoring wells and soil vapor monitoring points associated with the site. The San Mateo County Health – Environmental Health Services Division Groundwater Protection Program (GPP) approved this work in letters dated March 5, 2019 and May 13, 2019 (**Appendix A**). Well destruction field activities were completed between June 10, 2019, and June 20, 2019.

2.0 Well Destruction Activities

Between June 10, 2019, and June 20, 2019, Antea Group oversaw subcontractor Gregg Drilling & Testing, Inc. (Gregg), C-57 License #1044456, perform the following field activities:

- Destroy monitoring wells MW-6, MW-7, MW-8, MW-9, MW-10R, MW-14B, MW-17B, MW-18, MW-19, MW-22, MW-23, MW-24, and MW-25 by over-drilling.
- Destroy monitoring wells MW-4, MW-12B, MW-13B, MW-15B, MW-20, and MW-21 by pressure-grouting.
- Destroy vapor monitoring points VP-1, VP-2, and VP-3 by air-knifing.
- Destroy sub-slab vapor monitoring points SS-3, SS-4, and SUBSLAB by probe removal.

The well and vapor monitoring point locations are shown on **Figure 2**. Construction details for the groundwater monitoring wells and vapor points are presented in **Table 1**. A photo log is included as **Appendix B**.

2.1 PRE-FIELD ACTIVITIES AND BOREHOLE CLEARANCE

Prior to the initiation of field activities, Antea Group prepared a site-specific Health and Safety Plan (HASP) and Job Safety Analyses (JSAs) for implementation during field activities. Prior to conducting intrusive work, private subsurface utility locator Pacific Coast Locators, Inc. (Pacific Coast) identified and marked underground utilities near the drilling locations. An Underground Service Alert (USA) ticket was obtained at least 48-hours before the start of drilling. Antea Group also obtained subsurface drilling permits from the GPP and encroachment permits from the City of San Mateo Public Works Department, which are included as **Appendix C** and **Appendix D**, respectively. Antea Group obtained site access agreements, as needed. Antea Group notified the appropriate parties following respective notification requirements.

2.2 MONITORING WELL DESTRUCTION BY OVERDRILLING

Between June 10, 2019, and June 20, 2019, Antea Group oversaw Gregg destroy wells MW-6, MW-7, MW-8, MW-9, MW-10R, MW-14B, MW-17B, MW-18, MW-19, MW-22, MW-23, MW-24, and MW-25 by over-drilling. Before drilling began, total depth of each well was measured to ensure the casing was void of obstructions. The depth-to-water was also measured to determine the water column height in each well. The monitoring wells were over-drilled to the total depth of each original borehole with 8-inch diameter hollow-stem augers centered by a guide rod inserted into the polyvinyl chloride (PVC) well casings (**Table 1**). The well casing and annular materials were removed from each location. With the approval of the GPP inspector Kian Atkinson, each borehole was backfilled with neat cement grout mixed at a ratio of 6 gallons of water to 94 pounds of Portland

cement to approximately 1-foot below ground surface (bgs) using a tremie pipe. Gregg's field sheets with the number of Portland cement bags used per day are included as **Appendix E**. A log of the number of bags of Portland cement used for each well compared to the number of bags the contractor charged is presented in **Table 2**. A comparison of the calculated volume of grout required to destroy each well versus the actual volume used for each well is presented in **Table 3**. Each well was completed at the surface with either asphalt or concrete dyed to match existing surface conditions as needed.

2.3 MONITORING WELL DESTRUCTION BY PRESSURE GROUTING

Pressure grouting monitoring wells MW-12B and MW-13B was approved in a letter from the GPP dated May 13, 2019.

During the utility mark-outs at monitoring wells MW-20 and MW-15B, an active CalTrans fiber optic signal line was identified less than one foot from MW-20 and approximately one foot from MW-15B. The line was originally marked by Pacific Coast as electrical, then later identified as a fiber optic signal line by CalTrans. During the utility mark-out at monitoring well MW-21, a street light electric line was located less than one foot from the well. During air-knife clearing around MW-4, a clay pipe was located adjacent to the monitoring well PVC casing within the well box and a subsequent utility locate determined it to be a sewer lateral for the apartment building at 605 E 5th Ave. Photos of the nearby utility markings are included in **Appendix B**. These locations were inspected by Deno Milano onsite on June 10, 2019, and it was determined that MW-20, MW-15B, MW-4, and MW-21 satisfied pressure grouting requirements if there were no obstructions in the casings and the total depth of each well was within 2 feet of the total depth shown on the well construction details. The inspection report completed by Deno Milano on June 10, 2019 also approved not overdrilling wells MW-12B and MW-13B in the case of improper grouting due to the presence of conductor casings, not overdrilling MW-4 in the case of improper grouting due to the presence of the sewer line, and not overdrilling MW-20 in the case of improper grouting due the presence of the fiber optic line.

After these permissions were granted, Antea Group oversaw the pressure grouting of MW-4, MW-12B, MW-13B, MW-15B, MW-20, and MW-21 between June 11, 2019 and June 17, 2019. Before pressure grouting activities began, Gregg measured total depth and depth-to-water for each well and checked each casing for obstructions. The total depth of each well was within two feet of the total depth shown on the well construction details and no obstructions were identified. Each well was filled with neat cement grout mixed at a ratio of 6 gallons of water to 94 pounds of Portland cement to just below the top of the well casing using a tremie pipe. Any water that reached the surface was contained and transferred to the waste roll-off bin onsite.

After tremie grouting, each well was pressurized to a minimum of 25 pounds per square inch (psi) for a minimum of 5 minutes. After five minutes, Gregg added grout to fill the casings if the grout level dropped. A log of the number of bags of Portland cement used for each well compared to the number of bags the contractor charged is presented in **Table 2**. A comparison of the calculated amount of grout required to the actual volume used for each well is presented in **Table 3**.

Pressure grout volume calculations, as approved by the San Mateo County Inspector, Kian Atkinson, are included in **Appendix F**. A summary of actual grouting volumes is presented below:

Well ID	Well Diameter (inches)	Borehole Diameter (inches)	Well Depth (feet)	Calculated Grout Volume (gallons)	Actual Grout Volume Used (gallons)	Grout Volume Deviation (percent)
MW-4	2	8	27	20.56	12	-41.6
MW-12B	2	8	30	12.92	14	8.4
MW-13B	2	8	31	12.77	15	17.5
MW-15B	2	8	29	12.88	12	0.9
MW-20	2	8	21	15.18	15	-1.2
MW-21	2	8	21	15.18	14	-7.8

Notes:
Grout Volume Deviation = [(*Total Grout Volume Used*) - (*Calculated Grout*)] / (*Calculated Grout*) * 100

After pressure grouting MW-12B and MW-13B, the top five feet of each PVC well casing and annular material was removed and the borehole backfilled with grout, leaving the steel conductor casing in place. After pressure grouting MW-15B, MW-20, and MW-21, the top five feet of each well casing and annular material was removed and backfilled with grout.

Each well was completed at the surface with either asphalt or concrete dyed to match existing surface conditions.

2.3.1 MONITORING WELL MW-4

The original pressure grout calculation for MW-4 used a borehole diameter value of 8.5 inches since this was the outer diameter documented in the original boring log from 1995. This diameter is unusual for a hollow-stem auger outer diameter, so the original drilling contractor Woodward Drilling Company, Inc. (Woodward) was contacted to verify this diameter. The operations manager for Woodward Drilling, Ryan Woodward, responded to the inquiry via email and confirmed that the outer diameter of the hollow-stem augers used were 8 inches and that the boring logs were accounting for an oversized auger bit. This correspondence is included in **Appendix G**. The pressure grout calculation was revised to account for this change in borehole diameter, and the calculated pressure grout volume was adjusted to 20.56 gallons.

On June 11, 2019, MW-4 was grouted via tremie pipe to just below the top of the well casing with approximately 12 gallons of grout and was pressurized at 25 psi for 5 minutes without depressurizing or the grout level dropping. The volume of grout added to MW-4 is 41.6 percent less than the calculated grout volume, which is below the acceptable grout deviation limit of 30 percent and would typically require over-drilling destruction (**Table 3**). However, during air-knife clearing activities on June 10, a clay pipe was found immediately adjacent to the well that touches the PVC casing of MW-4. A photo of the clay pipe touching the PVC casing of MW-4 is included in **Appendix B**.

The City of San Mateo was contacted to determine whether the clay pipe immediately adjacent to MW-4 is an active utility. Mark Hathaway, Construction Inspector II for the City of San Mateo, noted that the line is likely a sewer lateral that connects to the adjacent residential apartment complex at 603 East 5th Avenue since he noticed a sewer cleanout adjacent to MW-4 in the grass and similar sewer lateral lines in the apartment complex carport.

Pacific Coast was contracted to investigate whether the clay pipe immediately adjacent to MW-4 is an active sewer lateral. On July 3, 2019, a representative from Pacific Coast performed a subsurface investigation to assess the clay pipe. Pacific Coast attempted to remove the sewer cleanout cap that was located by Mr. Hathaway in the grass adjacent to MW-4, but the age of the cap and amount of rust prevented it from opening. Pacific Coast was able to identify the location of the clay pipe immediately adjacent to MW-4 by a ground penetrating radar anomaly that traced to the sewer lateral found in the apartment complex carport. No other sewer laterals from the apartment complex were identified, which suggests that the clay pipe immediately adjacent to MW-4 is the active sewer lateral for the apartment complex. A report summarizing Pacific Coast's investigation and interpretations is included as **Appendix H**.

Despite the grout deviation, Antea Group recommends MW-4 not be over-drilled due to the location of the active sewer lateral. Antea Group believes MW-4 has limited potential as a preferential pathway since the well casing was void of obstructions, and the pressure of 25 psi was held on the casing for five minutes resulting the application of 58.4% of its calculated grout volume (11.6% below the acceptable grout deviation limit of 30%).

2.4 VAPOR MONITORING POINT DESTRUCTION

2.4.1 ONSITE VAPOR POINTS

Vapor points VP-1, VP-2, and VP-3 were destroyed using an air-knife and vacuum truck to remove the ¼-inch diameter Teflon tubing and annular materials to the original total depth of each boring, which was 6 feet bgs for vapor points VP-1 and VP-3 and 5.5 feet bgs for vapor point VP-2 (**Table 1**). The resulting borings were backfilled to approximately one-foot bgs with neat cement grout mixed at a ratio of 6 gallons of water to 94 pounds of Portland cement mixture. The surface at each location was patched with concrete dyed to match existing surface conditions.

2.4.2 SUB-SLAB VAPOR POINTS

Sub-slab vapor points SS-3 and SS-4 were located in the apartment complex at 603 East 5th Avenue. Sub-slab point SS-3 was in the bathroom of Unit 1 and sub-slab point SS-4 was in the bedroom closet of Unit 4. The apartment complex property manager provided access to the units on June 14, 2019. Each probe was pulled out of the slab and the resulting borehole was backfilled with a grout slurry to the surface.

Sub-slab vapor point SUBSLAB was located in the 76 Service Station auto repair shop and was destroyed on June 20, 2019. The sub-slab vapor point was destroyed by drilling it out using a roto-hammer drill to the total boring depth of 0.5 feet bgs and backfilling the resulting borehole with a grout slurry to the surface.

Sub-slab vapor points SS-1 and SS-2 were installed in the commercial building located at 521 East 5th Avenue. Since their installation in 2013, the building was remodeled into a Safari Kid child care center unbeknownst to Antea Group. Construction activities began in 2015 and were recently completed. Child care services began in the building in June 2019. The flooring of the building has been entirely refinished and vapor probes cannot be located. Deno Milano stated that the probes could be left in place if it could be demonstrated that the probes will not serve as preferential vapor pathways. The flooring contractor for the recent construction, Capital Flooring & Design, Inc. (Capital Flooring), was contacted to determine if the vapor probes were observed during re-flooring work and what type of flooring materials were used. Chris Javier of Capital Flooring responded in an email on June 18, 2019, noting that the vapor probes were not observed, that there was bare concrete on the

floor when they started work, that they installed a self-leveling floor patch with a vapor barrier, and that they glued down vinyl planks with standard LVT glue (**Appendix G**). Additional information from the building contractor was requested by Deno Milano, and attempts were made to identify this contractor. Barber Construction was listed as the general contractor on numerous building permits submitted in 2017. Tyrone Barber of Barber Construction responded to requests for information in an email on June 21, 2019 and stated that he also did not notice any vapor probes but noted that numerous contractors have worked at the building and on the building flooring (**Appendix G**). A records request for the property with the City of San Mateo Building Division (**Appendix I**) identified the additional possible contractors of Jameson Construction (listed contractor during building remodeling) and Rinnovo Group (listed for interior and exterior remodeling activities). Jameson Construction was contacted and they stated that Jameson Construction was only responsible for the installation of the skylights. Attempts were made to contact Rinnovo Group, but the Rinnovo Group contact responsible for the work at the property is no longer with Rinnovo Group. As of the submission of this report, further response from Rinnovo Group has not been received.

Antea Group proposes that SS-1 and SS-2 be considered destroyed because of limited potential for them to be preferential pathways since the vapor probes were not observed by Capital Flooring and the contractor installed a self-leveling floor patch with a vapor barrier over the bare floor of the building beneath glued vinyl planks, effectively sealing the building from the subsurface.

2.5 PAVEMENT RESTORATION

As part of the City of San Mateo encroachment permit conditions, under the supervision of Antea Group personnel, Ransome Company of San Leandro, California restored the asphalt street pavement at the former locations of wells MW-12B, MW-15B, MW-20, MW-21, and MW-24, MW-25, and Gregg restored the concrete sidewalk flags at the former locations of wells MW-4, MW-8, MW-10R, and MW-14B.

3.0 Waste Disposal Summary

Gregg placed soil cuttings generated during well destruction activities into one 20-yard roll-off bin and construction debris generated during well construction activities (concrete and asphalt) into seven 55-gallon drums. The roll-off bin and drums were temporarily stored onsite. The roll-off bin was covered after every working day, and the drums were sealed and labeled in accordance with the corresponding Department of Transportation (DOT) protocols for non-hazardous waste. Following waste profiling, the waste bin and drums were removed from the site on July 2, 2019 and transported to Soil Safe in Adelanto, California by Antea Group's waste management contractor Belshire Environmental Services, Inc. (Belshire). A copy of the non-hazardous waste manifest for the soils and construction debris generated during the well destruction activities is included as **Appendix J**.

4.0 Conclusion

The monitoring wells and vapor monitoring points associated with the Site have been destroyed for case closure as required. Despite deviations from well destruction standards, Antea Group recommends MW-4, SS-1 and SS-2 be designated as destroyed based on a low potential for them to be preferential pathways and extenuating circumstances related to the active apartment complex sewer lateral immediately adjacent to MW-4 and the recently completed construction in the 521 East 5th Avenue.

5.0 Remarks

The findings contained in this report represent Antea USA, Inc.'s professional opinions based upon the currently available information and are arrived at in accordance with currently accepted professional standards. This report is based upon a specific scope of work requested by the client. For any reports cited that were not generated by Delta Consultants or Antea Group, the data from those reports is used "as is" and is assumed to be accurate. Antea Group does not guarantee the accuracy of this data for the referenced work performed nor the inferences or conclusions stated in these reports. The contract between Antea USA, Inc. and its client outlines the scope of work, and only those tasks specifically authorized by that contract or outlined in this report were performed. This report is intended only for the use of Antea USA, Inc.'s client and anyone else specifically identified in writing by Antea USA, Inc. as a user of this report. Antea USA, Inc. will not and cannot be liable for unauthorized reliance by any other third party. Other than as contained in this paragraph, Antea USA, Inc. makes no express or implied warranty as to the contents of this report.

Sincerely,

David Sisak
Project Manager
Antea Group

Notes:

bags - 47 pound Portland cement bags
AK - Air knife destruction method
PG - Pressure grout destruction method
OD - Overdrill destruction method

*Air knife destruction likely removed additional soil materials greater than the borehole diameter to ensure all well materials were removed

Grout volume estimates based on SMCEHD suggestion that 1 bag of Portland cement mixed with 3 gallons of water creates 4.75 gallons of mixed grout

Grout Volume Deviation = [(**Total Grout Volume Used**) - (**Calculated Grout**)] / (**Calculated Grout**) * 100

SUBJECT: UNOCAL 76 STATION #6390 AT 402 SOUTH DELAWARE STREET, SAN MATEO, CALIFORNIA

Dear Mr. Bishop:

Antea Group uploaded to the State GeoTracker database (GeoTracker) a revised well destruction work plan dated January 29, 2019. The following comments are based on San Mateo County Groundwater Protection Program (GPP) staff review of the work plan and the project file.

The work plan proposes to over-drill Monitoring Wells MW-12B and MW-13B, but does not provide sufficient detail to allow GPP staff to approve this action. The September 2008 report indicates 10-inch-diameter steel conductor casing is present in the wellbore and the wellbore is 18 inches in diameter to a depth of approximately 19 to 20.5 feet below grade. Does the registered professional intend on over-drilling these wells using 8-inch-diameter HSA oriented inside the steel casing or over-drilling the conductor casing with HSA having an inner diameter >10 inches? Drilling inside the conductor casing might damage the cement seal on the outside of the conductor casing or wrap the conductor casing around the auger, whereas drilling with large diameter auger might make it difficult to remove the conductor casing within the inner diameter of the auger. Therefore, please upload to GeoTraker by **April 16, 2019**, an addendum to the revised workplan detailing and justifying how these two wells will be destroyed. We recommend the registered professional consider pressure grouting these two wells.

Section 2.2 states bentonite will be added to the Portland cement mixture "as needed" to thicken the grout if the formation takes more grout than anticipated. GPP staff cannot support the potential addition of bentonite to the cement mixture because the registered professional did not justify the amount of bentonite that would be added and how this will be determined. GPP staff do not consider the addition of bentonite necessary if the cement is properly mixed at a ratio of 94 pounds of Portland cement to 6 to 7 gallons of water.

GPP staff approve the remainder of the work plan with the following conditions:

- Install drilling rod to the bottom of the inside of the well casing and over-drill the well with the rod in-place to the total depth of the previously drilled wellbore (do not attempt to remove the well casing before over-drilling as proposed in the revised work plan). The casing diameter of the monitoring wells is sufficient to allow the installation of drilling rod;

- Install tremie pipe to the bottom of the borehole if groundwater is present in the borehole and pump the grout down the tremie pipe until the grout flows freely out of the top of the borehole. It is permissible to raise the HSA as the grout rises within the borehole (the distance between the bottom of the auger and the top of the grout surface should not exceed a few feet). Please note, the HSA can only be used as the tremie pipe if no groundwater exists in the borehole;

- Record for each over-drilled well the diameter of the borehole drilled, the inner- and outer-diameter of the hollow-stem auger (HSA) used, the depth drilled, and the volume of grout and number of cement bags used; and

- Upload to GeoTracker by **July 30, 2019**, the electronic data file for the waste profiling and a report detailing and justifying the methods, findings, conclusions, and recommendations of the work. Please only submit the well completion report forms to the Department of Water Resources.

Please contact me at 650-372-6292 (direct), 650-372-6200 (main), or at dmilano@smcgov.org on Monday through Thursday (excluding holidays) if you have any questions.

Sincerely,

SUBJECT: UNOCAL 76 STATION #6390 AT 402 SOUTH DELAWARE STREET, SAN MATEO, CALIFORNIA

Dear Mr. Bishop:

Antea Group uploaded to the State GeoTracker database (GeoTracker) a April 5, 2019, addendum to the revised well destruction work plan dated January 29, 2019. San Mateo County Groundwater Protection Program (GPP) staff approve the addendum with the following conditions:

- Tremie grout until the grout flows out of the top of the tremie pipe (i.e. displace all groundwater from the well casing); and
- Follow all applicable approval conditions in our letter dated March 5, 2019.

The addendum does not sufficiently detail the over-drilling of MW-12B and MW-13B should pressure grouting fail to properly seal these wells. GPP staff will expect any over-drilling of these wells to occur in two phases: 1) removal of material <10-inches in diameter to total depth with pilot drilling rod extended to the full length of the borehole during drilling (proposed work) and 2) removal of the conductor casing and remaining material in the 18-inch diameter borehole to total depth with pilot drilling rod extended to the full length of the borehole during drilling. The latter step is necessary because drilling within the conductor casing (Step 1) may damage the cement seal along the outer surface of the conductor casing.

Please contact me at 650-372-6292 (direct), 650-372-6200 (main), or at dmilano@smcgov.org on Monday through Thursday (excluding holidays) if you have any questions.

Sincerely,

Deno G. Milano, PG

SUBSURFACE DRILLING PERMIT APPLICATION

Allow three (3) full working days for processing a complete permit application which includes payment (one permit per parcel). Drilling start date & time must be scheduled with County staff at (650) 484-0047 or drilling@smcgov.org at least 2 full working days (i.e. 48 hours) in advance. Visit smchealth.org/ehfees for Groundwater Protection Program Fees

PURPOSE OF APPLICATION
☐ Groundwater Monitoring/Vapor Well Installation ☐ Construct Soil Borings (variance request if to be left open >24 hrs)
☒ Groundwater Monitoring/Vapor Well Destruction Extension of Permit #
No. of Wells 7 No. of Borings Well/Boring Names see highlighted wells on Site Plan

PURPOSE OF DRILLING ☒ Environmental ☐ Geotechnical
TYPE OF AGENCY ☒ County GPP (permit approval is not to be considered work plan approval) ☐ RWQCB/DTSC/USEPA (Provide approval letter) ☐ None (i.e. voluntary)

SITE / DRILLING INFORMATION

Agency Case #: 11069 Assessor's Parcel # (required) 034-186-110 (one per permit)
Drilling Location Address: 524 4th Ave City: San Mateo Zip: 90608
To Be Constructed In: ☒ Public Property ☐ Private Property ☐ Refuse
Maximum Proposed Depth (wells/borings) 31 (feet) Drilling Method: Hollow Stem/Hand Auge
Boring Diameter: 6-8 inches Casing Diameter: 0.25"-2" Filter Pack Interval: see log Screen Interval: see log
Destruction Method: ☒ Pressure Grouting (provide well construction logs and grout calcs)
(6 gallons water max/94 lb cement, up to 5% bentonite) ☒ Overdrilling (guide rods for total depth prior to starting required)

WELL/BORING OWNER (Well/boring owner name or contact person should match signature)

Name: Antea Group Contact Person: Layne Kortbein
Address: 5910 Rice Creek Pkwy City, State, Zip: Shoreview, MN 55126
Telephone: 651-697-5117 Email: Layne.Kortbein@anteagroup.com

It is my responsibility to notify the County of any known changes in the purpose of this well/boring from that which is indicated on this application, to submit indication of annual usage of wells to the County, and to maintain the well in good condition. *(Letter signed by well/boring owner/authorized person, containing above language and attesting to knowledge of all permit requirements and conditions, may be substituted for signature.)*
Well/Boring Owner's/Contact Person's Signature: Layne Kortbein Date: 4/30/19

PROPERTY OWNER (Name as appears on assessor's roles should match signature)

Name: Linda Spady Contact Person: Linda Spady
Address: NW Dealer Co Holdings LLC, 4130 Cover Street City, State, Zip: Long Beach, CA 90808
Telephone: 916-579-5082 Email: lindabspady@gmail.com

I understand that a well/boring is being installed on my property. I agree to notify the County and Well Owner of any known damage or future access issues to the well *(Letter signed by property owner, containing above language, or encroachment permit may be substituted for signature)*
Property Owner's Signature: Linda Spady Date: 4/29/19

REV. 04/2018

FA660028

SUBSURFACE DRILLING PERMIT APPLICATION

REQUIREMENTS:

An accurate and correct map **must** be submitted with the application and include the following: north arrow, existing and historic site features, existing and proposed well/boring locations with ID's to scale, property lines and any other pertinent information. A work plan describing the drilling and construction/destruction methodology may be requested by County staff. A complete application with appropriate fees must be submitted 3 working days in advance of drilling and notification of start date and time must be provided at least 2 working days prior to drilling. The permit is subject to both General and Special Conditions stated below. A copy of the approved Subsurface Drilling Permit **must** be available on site while work related to the permit is being performed. **Drilling may begin at the notified date and time whether County staff is present or not.**

GENERAL CONDITIONS:

A. Field notification must be provided to GPP drilling inspection staff at least 2 full working days prior to the start of drilling. GPP Caseworker also must be notified if site is associated with a remedial action case.
B. Well and boring construction and destruction under this permit are subject to the Standards for the Construction of Wells in San Mateo County, County Groundwater Protection Program (GPP) Guidelines, Policies & Procedures, the State Water Well Standards, and any instructions by a Health Department representative.
C. Well/Boring Owner, Driller, and Responsible Professional assume responsibility for all activities and uses under the permit, including compliance with Workmen's Compensation Laws, and indemnify, defend and save the County of San Mateo, its officers, agents and employees, free and harmless from any and all expense, cost, or liability in connection with or resulting from work or stopped-work associated with the permit, including, but not limited to, property damage, personal injury, wrongful death, and loss of income.
D. All borings **must** be properly destroyed (grouted/sealed) within 24 hours of drilling, unless special conditions are approved beforehand in writing as part of this permit, and must be continuously protected and stabilized.
E. Analytical results of all soil, vapor, and groundwater samples collected during the execution of drilling under this permit **must** be submitted to County GPP staff by the Responsible Professional within 60 days of sample collection. If contamination is discovered during drilling, verbal notification to County GPP by the Responsible Professional is **required** within 72 hours of discovery. Proper storage, labeling & disposal of investigation-derived residual wastes are the responsibility of the consultant unless stated otherwise contractually.
F. Boring logs, well construction details, and finalized as-built location map for all borings/ wells (except geotechnical borings) signed by a Responsible Professional, **must** be submitted to County GPP by the Responsible Professional within 60 days of drilling/construction/destruction. DWR Form 188 must be filed with the State per water code 13752.
G. Permit is valid only for the purpose specified herein. No change in purpose or required procedures, as described on this permit application, in the associated workplan, or in the special conditions below, will be allowed except upon written permission from the County. Construction aspects can be changed based on conditions encountered in the field.
H. **Permit is valid for one mobilization** associated with originally permitted boring/well locations only, including contingency locations, and is automatically canceled if not exercised, or if an extension is not applied for and granted within 120 days of the original permit issuance date. Failure to notify staff of cancellation or delay in start time will result in the Consultant being billed an Inspection Cancellation fee if GPP staff attempted to perform an inspection. Fees are listed at smchealth.org/ehfees
I. Wells installed under this permit may not be used for domestic, municipal, agricultural, or irrigation water supply.
J. All work performed **must** conform to Business and Profession Codes and State Water Well Standards.
K. Top-of-casing elevation of all wells **must** be surveyed to the nearest 0.01-foot relative to Mean Sea Level or NAVD88 and submitted to County GPP within 60 days of drilling, and to State GeoTracker as appropriate. Geotechnical wells are exempt from this requirement if a written variance from GPP is obtained prior to drilling.
L. Latitude and longitude of all wells **must** be surveyed with sub-meter accuracy relative to NAD83 and submitted to County GPP within 60 days of drilling, and to State GeoTracker as appropriate.
M. Violation of any requirement or general or special permit condition may result in an order by GPP staff to cease work under this permit, correct the violation, potentially re-permit the work as a new mobilization, and potential actions may be taken against the Well Owner, Property Owner, or Responsible Professional by GPP.

Notes:

ft = feet
in = inches
TOC = Top of Casing
NSVD = not surveyed
bgs = below ground surface
NA = not applicable

Shallow Zone wells - screened interval mostly in the upper 20 feet below grade
Deep Zone wells - screened interval mostly between 20 and 30 feet below grade
SS = stainless steel
PVC = polyvinyl chloride

[1] = TOC Elevations were surveyed to the North American Vertical Datum of 1988 (NAVD 88) on the following dates:

MW-1 through MW-5 -- August 13, 2005 by Morrow Surveying
MW-6 through MW-9 -- January 16, 2007 by Morrow Surveying
MW-10 through MW-15B -- August 18, 2008 by Mid Coast Engineers
MW-17B - June 6, 2011 by Mid Coast Engineers
MW-10R, MW-18, MW-19 - May 25, 2012 by Mid Coast Engineers
MW-20 and MW-21 - May 16, 2013 by Morrow Surveying
MW-22, MW-23 and MW-24 - July 1, 2013 by Morrow Surveying

Excerpt from *Antea Group, Addendum to Revised Well Destruction Work Plan, April 5, 2019*

Pressure Grouting Option

Antea Group proposes to pressure grout monitoring wells MW-12B and MW-13B.

Prior to implementing the pressure grouting option at each well, the total depth of the well casing with be measured to ascertain the thickness of sediment in the well casing. If the thickness of sediment is greater than 1.5 feet, the sediment will be removed using a vacuum truck connected to a drop tube assembly. The thickness of sediment measured during the most recent sampling event completed on August 4, 2017 indicated that sediment thickness encountered at each monitoring well was less than 1.5 feet. The groundwater monitoring field data sheets for the August 2017 groundwater monitoring event are presented as **Appendix C**. The estimated sediment thickness during the August 2017 groundwater monitoring event is listed on T**able 2**.

After verifying that the sediment thickness in the well casing is less than 1.5 feet, the drilling subcontractor will tremie backfill each well casing to just below the top of each well casing with neat cement grout mixed at a maximum of six (6) gallons of water per 94 pounds of Portland cement. Any water reaching the surface will be contained in 55-gallon drums. Following tremie grouting, each grouted well will be pressurized to a minimum of 25 pounds per square inch (psi) for a minimum of five (5) minutes. After five (5) minutes, any residual space observed within the well casing will be filled with grout.

The following calculated grout volumes will be used to evaluate to the well destruction process:

Well ID	Well Casing Diameter (inches)	Well Depth (feet)	Borehole Diameter (inches)	Filter Pack Interval (feet)	Screen Interval (feet)	Grout Volume (gallons)
MW-12B	2	30.0	18 (0 to 19.0 ft bgs) 8 (19.0 to 30.0 ft bgs)	19.0 to 29.5	19.0 to 29.0	12.9
MW-13B	2	31.0	18 (0 to 20.5 ft bgs) 8 (20.5 to 31.0 ft bgs)	20.5 to 31.0	21.0 to 31.0	12.8

After pressure grouting each well, the top five feet of PVC well casing will be removed using an air-knife/vacuum truck and the remaining annular space will be filled with grout leaving the steel conductor casing in place. The surface will be repaired using concrete dyed to match existing surface conditions. Each location will be destroyed and grouted before well destruction activities commence at any other well.

SUBSURFACE DRILLING PERMIT APPLICATION

Allow three (3) full working days for processing a complete permit application which includes payment (one permit per parcel). Drilling start date & time must be scheduled with County staff at (650) 464-0047 or drilling@smcgov.org at least 2 full working days (i.e. 48 hours) in advance. Visit smchealth.org/ehfees for Groundwater Protection Program Fees

PURPOSE OF APPLICATION: ☐ Groundwater Monitoring/Vapor Well Installation ☐ Construct Soil Borings (variance request if to be left open >24 hrs)
☒ Groundwater Monitoring/Vapor Well Destruction Extension of Permit # _____
No. of Wells 2 No. of Borings _____ Well/Boring Names MW-21, MW-12B

SUPPLEMENTAL DRILLING: ☒ Environmental ☐ Geotechnical
LOCAL APPROVAL: ☒ County GPP (permit approval is not to be considered work plan approval) ☐ RWQCB/DTSC/USEPA (Provide approval letter) ☐ None (i.e. voluntary)

SITE / DRILLING INFORMATION

Agency Case # 11069 Assessor's Parcel # (required) Right of Way, S Delaware St (one per permit)
Drilling Location Address: 600 block of E 5th Ave City: San Mateo Zip: 90808
To Be Constructed In: ☒ Public Property ☐ Private Property ☐ Refuse
Maximum Proposed Depth (wells/borings) 29 (feet) Drilling Method: Hollow Stem Auger
Boring Diameter: 8 inches Casing Diameter: 2 inches Filter Pack Interval: see table Screen Interval: see table
Destruction Method: ☒ Pressure Grouting (provide well construction logs and grout calcs)
(6 gallons water max/94 lb cement, up to 5% bentonite) ☒ Overdrilling (guide rods for total depth prior to starting required)

WELL BORING OWNER (Well/boring owner name or contact person should match signature)

Name: Antea Group Contact Person: Layne Kortbein
Address: 5910 Rice Creek Pkwy City, State, Zip: Shoreview, MN 55418
Telephone: 651-697-5117 Email: Layne.Kortbein@anteagroup.com
It is my responsibility to notify the County of any known changes in the purpose of this well/boring from that which is indicated on this application, to submit indication of annual usage of wells to the County, and to maintain the well in good condition. *(Letter signed by well/boring owner/contact person, containing above language and attesting to knowledge of all permit requirements and conditions, may be substituted for signature.)*
Well/Boring Owner's/Contact Person's Signature: Layne Kortbein Date: 4/30/19

PROPERTY OWNER (Name as appears on assessor's roles should match signature)

Name: City of San Mateo Right of Way Contact Person: Karen Magallanes
Address: 330 West 20th Avenue City, State, Zip: San Mateo, CA 94403
Telephone: 650-522-7576 Email: kmagallanes@cityofsanmateo.org
I understand that a well/boring is being installed on my property. I agree to notify the County and Well Owner of any known damage or future access issues to the well *(Letter signed by property owner, containing above language, or encroachment permit may be substituted for signature)*
Property Owner's Signature: _____ Date: _____

DRILLING COMPANY

Drilling Company: Gregg Drilling & Testing, Inc. Contact Person: Chris Pruner
Address: 950 Howe Road City, State, Zip: Martinez, CA 94553
Telephone: 925-313-6800 Email: cpruner@greggdrilling.com C57 Drillers License # 1044456
I certify that the well/boring will be constructed in compliance with the conditions of this permit (see reverse), the San Mateo County Well Ordinance, and the State Water Well Standards, and that the license listed above is considered current and active by the Contractors State License Board.
Driller's Signature: Chris Pruner Date: 4/29/19

CONSULTANT COMPANY

Consultant Company: Antea Group Project Manager: David Sisak
Address: 505 14th Street Suite 900 City, State, Zip: Oakland, CA 94612
Telephone: 510-588-8625 Email: David.Sisak@anteagroup.com
Field Contact & Cell # (if known): Layne Kortbein, 608-408-9954
I certify that this application is correct to the best of my knowledge and the well/boring will be constructed/destroyed in compliance with the conditions of this permit (see reverse), the San Mateo County Well Ordinance, and the State Water Well Standards. I understand that I am responsible for General Conditions E, F, K, and L of this permit and if I indicated the purpose of drilling is geotechnical, then no one will use the boring to collect any samples for environmental analyses. If there is a change in Responsible Professional, I will notify San Mateo County GPP staff.
Responsible Professional's Name (Please print legibly): Regina Bussard
Responsible Professional's Signature: Regina Bussard Date: 5-2-19
California Professional Geologist (PG) No. 8288 or Civil Engineer (PE) No. _____

REV. 03/2016

FA660029

SUBSURFACE DRILLING PERMIT APPLICATION

REQUIREMENTS:

An accurate and correct map **must** be submitted with the application and include the following: north arrow, existing and historic site features, existing and proposed well/boring locations with ID's to scale, property lines and any other pertinent information. A work plan describing the drilling and construction/destruction methodology may be requested by County staff. A complete application with appropriate fees must be submitted 3 working days in advance of drilling and notification of start date and time must be provided at least 2 working days prior to drilling. The permit is subject to both General and Special Conditions stated below. A copy of the approved Subsurface Drilling Permit **must** be available on site while work related to the permit is being performed. **Drilling may begin at the notified date and time whether County staff is present or not.**

GENERAL CONDITIONS:

A. Field notification must be provided to GPP drilling inspection staff at least 2 full working days prior to the start of drilling. GPP Caseworker also must be notified if site is associated with a remedial action case.
B. Well and boring construction and destruction under this permit are subject to the Standards for the Construction of Wells in San Mateo County, County Groundwater Protection Program (GPP) Guidelines, Policies & Procedures, the State Water Well Standards, and any instructions by a Health Department representative.
C. Well/Boring Owner, Driller, and Responsible Professional assume responsibility for all activities and uses under the permit, including compliance with Workmen's Compensation Laws, and indemnify, defend and save the County of San Mateo, its officers, agents and employees, free and harmless from any and all expense, cost, or liability in connection with or resulting from work or stopped-work associated with the permit, including, but not limited to, property damage, personal injury, wrongful death, and loss of income.
D. All borings **must** be properly destroyed (grouted/sealed) within 24 hours of drilling, unless special conditions are approved beforehand in writing as part of this permit, and must be continuously protected and stabilized.
E. Analytical results of all soil, vapor, and groundwater samples collected during the execution of drilling under this permit **must** be submitted to County GPP staff by the Responsible Professional within 60 days of sample collection. If contamination is discovered during drilling, verbal notification to County GPP by the Responsible Professional is **required** within 72 hours of discovery. Proper storage, labeling & disposal of investigation-derived residual wastes are the responsibility of the consultant unless stated otherwise contractually.
F. Boring logs, well construction details, and finalized as-built location map for all borings/ wells (except geotechnical borings) signed by a Responsible Professional, **must** be submitted to County GPP by the Responsible Professional within 60 days of drilling/construction/destruction. DWR Form 188 must be filed with the State per water code 13752.
G. Permit is valid only for the purpose specified herein. No change in purpose or required procedures, as described on this permit application, in the associated workplan, or in the special conditions below, will be allowed except upon written permission from the County. Construction aspects can be changed based on conditions encountered in the field.
H. **Permit is valid for one mobilization** associated with originally permitted boring/well locations only, including contingency locations, and is automatically canceled if not exercised, or if an extension is not applied for and granted within 120 days of the original permit issuance date. Failure to notify staff of cancellation or delay in start time will result in the Consultant being billed an Inspection Cancellation fee if GPP staff attempted to perform an inspection. Fees are listed at smchealth.org/ehfees
I. Wells installed under this permit may not be used for domestic, municipal, agricultural, or irrigation water supply.
J. All work performed **must** conform to Business and Profession Codes and State Water Well Standards.
K. Top-of-casing elevation of all wells **must** be surveyed to the nearest 0.01-foot relative to Mean Sea Level or NAVD88 and submitted to County GPP within 60 days of drilling, and to State GeoTracker as appropriate. Geotechnical wells are exempt from this requirement if a written variance from GPP is obtained prior to drilling.
L. Latitude and longitude of all wells **must** be surveyed with sub-meter accuracy relative to NAD83 and submitted to County GPP within 60 days of drilling, and to State GeoTracker as appropriate.
M. Violation of any requirement or general or special permit condition may result in an order by GPP staff to cease work under this permit, correct the violation, potentially re-permit the work as a new mobilization, and potential actions may be taken against the Well Owner, Property Owner, or Responsible Professional by GPP.

PLAN-3
TEMP TRAFFIC CONTROL PLAN

NOTES

- Traffic control shall conform with the most current CAMUTCD part 6 and/or Caltrans Standards
- One lane of traffic in each direction and all high volume turning lanes shall be maintained at all times on all streets at a minimum lane width of 10 feet.
- Contractor shall notify local authorities once signs are posted.
- All advanced warning signs shall be equipped with 2 (18" orange flags)
- Certified Traffic Control Workers shall have Type II vests, work shoes, and hard hats.
- Temporary no parking signs shall be placed a min of 72 hrs prior of work.
- Driveways shall be monitored and maintained at all times during work hours.
- Distance between sign and work area will be determined on speed limit.
- Roadway shall not be opened until safe for public use. All open trenches must be plated or backfilled prior to public usage.
- All Devices shall be removed when no longer required.

Excerpt from *Antea Group, Addendum to Revised Well Destruction Work Plan, April 5, 2019*

Pressure Grouting Option

Antea Group proposes to pressure grout monitoring wells MW-12B and MW-13B.

Prior to implementing the pressure grouting option at each well, the total depth of the well casing with be measured to ascertain the thickness of sediment in the well casing. If the thickness of sediment is greater than 1.5 feet, the sediment will be removed using a vacuum truck connected to a drop tube assembly. The thickness of sediment measured during the most recent sampling event completed on August 4, 2017 indicated that sediment thickness encountered at each monitoring well was less than 1.5 feet. The groundwater monitoring field data sheets for the August 2017 groundwater monitoring event are presented as **Appendix C**. The estimated sediment thickness during the August 2017 groundwater monitoring event is listed on **Table 2**.

After verifying that the sediment thickness in the well casing is less than 1.5 feet, the drilling subcontractor will tremie backfill each well casing to just below the top of each well casing with neat cement grout mixed at a maximum of six (6) gallons of water per 94 pounds of Portland cement. Any water reaching the surface will be contained in 55-gallon drums. Following tremie grouting, each grouted well will be pressurized to a minimum of 25 pounds per square inch (psi) for a minimum of five (5) minutes. After five (5) minutes, any residual space observed within the well casing will be filled with grout.

The following calculated grout volumes will be used to evaluate to the well destruction process:

Well ID	Well Casing Diameter (inches)	Well Depth (feet)	Borehole Diameter (inches)	Filter Pack Interval (feet)	Screen Interval (feet)	Grout Volume (gallons)
MW-12B	2	30.0	18 (0 to 19.0 ft bgs) 8 (19.0 to 30.0 ft bgs)	19.0 to 29.5	19.0 to 29.0	12.9
MW-13B	2	31.0	18 (0 to 20.5 ft bgs) 8 (20.5 to 31.0 ft bgs)	20.5 to 31.0	21.0 to 31.0	12.8

After pressure grouting each well, the top five feet of PVC well casing will be removed using an air-knife/vacuum truck and the remaining annular space will be filled with grout leaving the steel conductor casing in place. The surface will be repaired using concrete dyed to match existing surface conditions. Each location will be destroyed and grouted before well destruction activities commence at any other well.

SUBSURFACE DRILLING PERMIT APPLICATION

Allow three (3) full working days for processing a complete permit application which includes payment (one permit per parcel). Drilling start date & time must be scheduled with County staff at (650) 464-0047 or drilling@smcgov.org at least 2 full working days (i.e. 48 hours) in advance. Visit smchealth.org/ehfees for Groundwater Protection Program Fees

PURPOSE OF APPLICATION: ☐ Groundwater Monitoring/Vapor Well Installation ☐ Construct Soil Borings (variance request if to be left open >24 hrs)
☒ Groundwater Monitoring/Vapor Well Destruction Extension of Permit # _____
No. of Wells 1 No. of Borings _____ Well/Boring Names MW-24

PURPOSE OF DRILLING: ☒ Environmental ☐ Geotechnical
LEAD AGENCY: ☒ County GPP (permit approval is not to be considered work plan approval) ☐ RWQCB/DTSC/USEPA (Provide approval letter) ☐ None (i.e. voluntary)

SITE / DRILLING INFORMATION

Agency Case # 11069 Assessor's Parcel # (required) Right of Way, E 5th Ave (one per permit)
Drilling Location Address: 600 block of E 5th Ave City: San Mateo Zip: 90808
To Be Constructed In: ☒ Public Property ☐ Private Property ☐ Refuse
Maximum Proposed Depth (wells/borings) 21 (feet) Drilling Method: Hollow Stem Auger
Boring Diameter: 8 Inches Casing Diameter: 2 Inches Filter Pack Interval: 6 to 21 feet Screen Interval: 6 to 21 feet
Destruction Method: ☐ Pressure Grouting (provide well construction logs and grout calcs)
(6 gallons water max/94 lb cement, up to 5% bentonite) ☒ Overdrilling (guide rods for total depth prior to starting required)

WELL/BORING OWNER

(Well/boring owner name or contact person should match signature)

Name: Antea Group Contact Person: Layne Kortbein
Address: 5910 Rice Creek Pkwy City, State, Zip: Shoreview, MN 55418
Telephone: 651-697-5117 Email: Layne.Kortbein@anteagroup.com

It is my responsibility to notify the County of any known changes in the purpose of this well/boring from that which is indicated on this application, to submit indication of annual usage of wells to the County, and to maintain the well in good condition. *(Letter signed by well/boring owner/contact person, containing above language and attesting to knowledge of all permit requirements and conditions, may be substituted for signature.)*
Well/Boring Owner's/Contact Person's Signature: Layne Kortbein Date: 4/30/19

PROPERTY OWNER

(Name as appears on assessor's roles should match signature)

Name: City of San Mateo Right of Way Contact Person: Karen Magallanes
Address: 330 West 20th Avenue City, State, Zip: San Mateo, CA 94403
Telephone: 650-522-7576 Email: kmagallanes@cityofsanmateo.org

I understand that a well/boring is being installed on my property. I agree to notify the County and Well Owner of any known damage or future access issues to the well *(Letter signed by property owner, containing above language, or encroachment permit may be substituted for signature)*
Property Owner's Signature: _____ Date: _____

DRILLING COMPANY

Drilling Company: Gregg Drilling & Testing, Inc. Contact Person: Chris Pruner
Address: 950 Howe Road City, State, Zip: Martinez, CA 94553
Telephone: 925-313-5800 Email: cpruner@greggdrilling.com C57 Drillers License # 1044456

I certify that the well/boring will be constructed in compliance with the conditions of this permit (see reverse), the San Mateo County Well Ordinance, and the State Water Well Standards, and that the license listed above is considered current and active by the Contractors State License Board.
Driller's Signature: Chris Pruner Date: 4/29/19

CONSULTANT COMPANY

Consultant Company: Antea Group Project Manager: David Sisak
Address: 505 14th Street Suite 900 City, State, Zip: Oakland, CA 94612
Telephone: 510-588-8525 Email: David.Sisak@anteagroup.com
Field Contact & Cell # (if known): Layne Kortbein, 608-406-9954

I certify that this application is correct to the best of my knowledge and the well/boring will be constructed/destroyed in compliance with the conditions of this permit (see reverse), the San Mateo County Well Ordinance, and the State Water Well Standards. I understand that I am responsible for General Conditions E, F, K, and L of this permit and if I indicated the purpose of drilling is geotechnical, then no one will use the boring to collect any samples for environmental analyses. If there is a change in Responsible Professional, I will notify San Mateo County GPP staff.
Responsible Professional's Name (Please print legibly): Regina Bussard
Responsible Professional's Signature: R. Bussard Date: 5-2-19
California Professional Geologist (PG) No. 8288 or Civil Engineer (PE) No. _____

REV. 09/2018

FA66030

SUBSURFACE DRILLING PERMIT APPLICATION

REQUIREMENTS:

An accurate and correct map **must** be submitted with the application and include the following: north arrow, existing and historic site features, existing and proposed well/boring locations with ID's to scale, property lines and any other pertinent information. A work plan describing the drilling and construction/destruction methodology may be requested by County staff. A complete application with appropriate fees must be submitted 3 working days in advance of drilling and notification of start date and time must be provided at least 2 working days prior to drilling. The permit is subject to both General and Special Conditions stated below. A copy of the approved Subsurface Drilling Permit **must** be available on site while work related to the permit is being performed. **Drilling may begin at the notified date and time whether County staff is present or not.**

GENERAL CONDITIONS:

A. Field notification must be provided to GPP drilling inspection staff at least 2 full working days prior to the start of drilling. GPP Caseworker also must be notified if site is associated with a remedial action case.

B. Well and boring construction and destruction under this permit are subject to the Standards for the Construction of Wells in San Mateo County, County Groundwater Protection Program (GPP) Guidelines, Policies & Procedures, the State Water Well Standards, and any instructions by a Health Department representative.

C. Well/Boring Owner, Driller, and Responsible Professional assume responsibility for all activities and uses under the permit, including compliance with Workmen's Compensation Laws, and indemnify, defend and save the County of San Mateo, its officers, agents and employees, free and harmless from any and all expense, cost, or liability in connection with or resulting from work or stopped-work associated with the permit, including, but not limited to, property damage, personal injury, wrongful death, and loss of income.

D. All borings **must** be properly destroyed (grouted/sealed) within 24 hours of drilling, unless special conditions are approved beforehand in writing as part of this permit, and must be continuously protected and stabilized.

E. Analytical results of all soil, vapor, and groundwater samples collected during the execution of drilling under this permit **must** be submitted to County GPP staff by the Responsible Professional within 60 days of sample collection. If contamination is discovered during drilling, verbal notification to County GPP by the Responsible Professional is **required** within 72 hours of discovery. Proper storage, labeling & disposal of investigation-derived residual wastes are the responsibility of the consultant unless stated otherwise contractually.

F. Boring logs, well construction details, and finalized as-built location map for all borings/ wells (except geotechnical borings) signed by a Responsible Professional, **must** be submitted to County GPP by the Responsible Professional within 60 days of drilling/construction/destruction. DWR Form 188 must be filed with the State per water code 13752.

G. Permit is valid only for the purpose specified herein. No change in purpose or required procedures, as described on this permit application, in the associated workplan, or in the special conditions below, will be allowed except upon written permission from the County. Construction aspects can be changed based on conditions encountered in the field.

H. **Permit is valid for one mobilization** associated with originally permitted boring/well locations only, including contingency locations, and is automatically canceled if not exercised, or if an extension is not applied for and granted within 120 days of the original permit issuance date. Failure to notify staff of cancellation or delay in start time will result in the Consultant being billed an Inspection Cancellation fee if GPP staff attempted to perform an inspection. Fees are listed at smchealth.org/ehfees

I. Wells installed under this permit may not be used for domestic, municipal, agricultural, or irrigation water supply.

J. All work performed **must** conform to Business and Profession Codes and State Water Well Standards.

K. Top-of-casing elevation of all wells **must** be surveyed to the nearest 0.01-foot relative to Mean Sea Level or NAVD88 and submitted to County GPP within 60 days of drilling, and to State GeoTracker as appropriate. Geotechnical wells are exempt from this requirement if a written variance from GPP is obtained prior to drilling.

L. Latitude and longitude of all wells **must** be surveyed with sub-meter accuracy relative to NAD83 and submitted to County GPP within 60 days of drilling, and to State GeoTracker as appropriate.

M. Violation of any requirement or general or special permit condition may result in an order by GPP staff to cease work under this permit, correct the violation, potentially re-permit the work as a new mobilization, and potential actions may be taken against the Well Owner, Property Owner, or Responsible Professional by GPP.

Notes:

ft = feet
in = inches
TOC = Top of Casing
NSVD = not surveyed
bgs = below ground surface
NA = not applicable

Shallow Zone wells - screened interval mostly in the upper 20 feet below grade
Deep Zone wells - screened interval mostly between 20 and 30 feet below grade
SS = stainless steel
PVC = polyvinyl chloride

[1] = TOC Elevations were surveyed to the North American Vertical Datum of 1988 (NAVD 88) on the following dates:

MW-1 through MW-5 -- August 13, 2005 by Morrow Surveying
MW-6 through MW-9 -- January 16, 2007 by Morrow Surveying
MW-10 through MW-15B -- August 18, 2008 by Mid Coast Engineers
MW-17B - June 6, 2011 by Mid Coast Engineers
MW-10R, MW-18, MW-19 - May 25, 2012 by Mid Coast Engineers
MW-20 and MW-21 - May 16, 2013 by Morrow Surveying
MW-22, MW-23 and MW-24 - July 1, 2013 by Morrow Surveying

PLAN-1
TEMP TRAFFIC CONTROL PLAN

NOTES

- Traffic control shall conform with the most current CAMUTCD part 6 and/or Caltrans Standards
- One lane of traffic in each direction and all high volume turning lanes shall be maintained at all times on all streets at a minimum lane width of 10 feet.
- Contractor shall notify local authorities once signs are posted.
- All advanced warning signs shall be equipped with 2 (18" orange flags)
- Certified Traffic Control Workers shall have Type II vests, work shoes, and hard hats.
- Temporary no parking signs shall be placed a min of 72 hrs prior of work.
- Driveways shall be monitored and maintained at all times during work hours.
- Distance between sign and work area will be determined on speed limit.
- Roadway shall not be opened until safe for public use. All open trenches must be plated or backfilled prior to public usage.
- All Devices shall be removed when no longer required.

MEANING OF LETTER CODES ON TYPICAL APPLICATION DIAGRAMS (WATCH TABLE 6G-1)

ROAD TYPE	DISTANCE BETWEEN SIGNS A	B	C
Urban (Low Speed) - 25 mph or less	100 ft	100 ft	100 ft
Urban (Low Speed) - 25 to 40 mph	250 ft	250 ft	250 ft
Urban (High Speed) - 40 mph	350 ft	350 ft	350 ft
Rural	500 ft	500 ft	500 ft
Expressway / Freeway	1,000 ft	1,500 ft	2,640 ft

SUBSURFACE DRILLING PERMIT APPLICATION

Allow three (3) full working days for processing a complete permit application which includes payment (one permit per parcel). Drilling start date & time must be scheduled with County staff at (650) 464-0047 or drilling@smcgov.org at least 2 full working days (i.e. 48 hours) in advance. Visit smchealth.org/ehfees for Groundwater Protection Program Fees

PURPOSE OF APPLICATION: ☐ Groundwater Monitoring/Vapor Well Installation ☐ Construct Soil Borings (variance request if to be left open >24 hrs)
☒ Groundwater Monitoring/Vapor Well Destruction Extension of Permit # _____
No. of Wells 1 No. of Borings _____ Well/Boring Names MW-25

PURPOSE OF DRILLING: ☒ Environmental ☐ Geotechnical
LEAD AGENCY: ☒ County GPP (permit approval is not to be considered work plan approval) ☐ RWQCB/DTSC/USEPA (Provide approval letter) ☐ None (i.e. voluntary)

SITE / DRILLING INFORMATION

Agency Case # 11069 Assessor's Parcel # (required) Right of Way, S Delaware St (one per permit)
Drilling Location Address: 500 block of S Eldorado St City: San Mateo Zip: 90808
To Be Constructed In: ☒ Public Property ☐ Private Property ☐ Refuse
Maximum Proposed Depth (wells/borings) 21 (feet) Drilling Method: Hollow Stem Auger
Boring Diameter: 8 inches Casing Diameter: 2 inches Filter Pack Interval: 5 to 21 feet Screen Interval: 6 to 21 feet
Destruction Method: ☐ Pressure Grouting (provide well construction logs and grout calcs)
(6 gallons water max/94 lb cement, up to 5% bentonite) ☒ Overdrilling (guide rods for total depth prior to starting required)

WELL BORING OWNER (Well/boring owner name or onsite operator should match signature)

Name: Antea Group Contact Person: Layne Kortbein
Address: 5910 Rice Creek Pkwy City, State, Zip: Shoreview, MN 55418
Telephone: 651-697-5117 Email: Layne.Kortbein@anteagroup.com

It is my responsibility to notify the County of any known changes in the purpose of this well/boring from that which is indicated on this application, to submit indication of annual usage of wells to the County, and to maintain the well in good condition. *(Letter signed by well/boring owner/contact person, containing above language and attesting to knowledge of all permit requirements and conditions, may be substituted for signature.)*
Well/Boring Owner's/Contact Person's Signature: Layne Kortbein Date: 4/30/19

PROPERTY OWNER (Name as appears on assessor's roles should match signature)

Name: City of San Mateo Right of Way Contact Person: Karen Magallanes
Address: 330 West 20th Avenue City, State, Zip: San Mateo, CA 94403
Telephone: 650-522-7576 Email: kmagallanes@cityofsanmateo.org

I understand that a well/boring is being installed on my property. I agree to notify the County and Well Owner of any known damage or future access issues to the well *(Letter signed by property owner, containing above language, or encroachment permit may be substituted for signature)*
Property Owner's Signature: _____ Date: _____

DRILLING COMPANY

Drilling Company: Gregg Drilling & Testing, Inc. Contact Person: Chris Pruner

Telephone: 925-313-5800 Email: cpruner@greggdrilling.com C57 Drillers License # 1044456

I certify that the well/boring will be constructed in compliance with the conditions of this permit (see reverse), the San Mateo County Well Ordinance, and the State Water Well Standards, and that the license listed above is considered current and active by the Contractors State License Board.
Driller's Signature: _____ Date: 4/29/19

CONSULTANT COMPANY

Consultant Company: Antea Group Project Manager: David Sisak
Address: 505 14th Street Suite 900 City, State, Zip: Oakland, CA 94612
Telephone: 510-588-8525 Email: David.Sisak@anteagroup.com
Field Contact & Cell # (if known): Layne Kortbein, 608-408-9954

I certify that this application is correct to the best of my knowledge and the well/boring will be constructed/destroyed in compliance with the conditions of this permit (see reverse), the San Mateo County Well Ordinance, and the State Water Well Standards. I understand that I am responsible for General Conditions E, F, K, and L of this permit and if I indicated the purpose of drilling is geotechnical, then no one will use the boring to collect any samples for environmental analyses. If there is a change in Responsible Professional, I will notify San Mateo County GPP staff.
Responsible Professional's Name (Please print legibly): Regina Bussard
Responsible Professional's Signature: _____ Date: 5-2-19
California Professional Geologist (PG) No. 8288 or Civil Engineer (PE) No. _____

REV. 03/2018

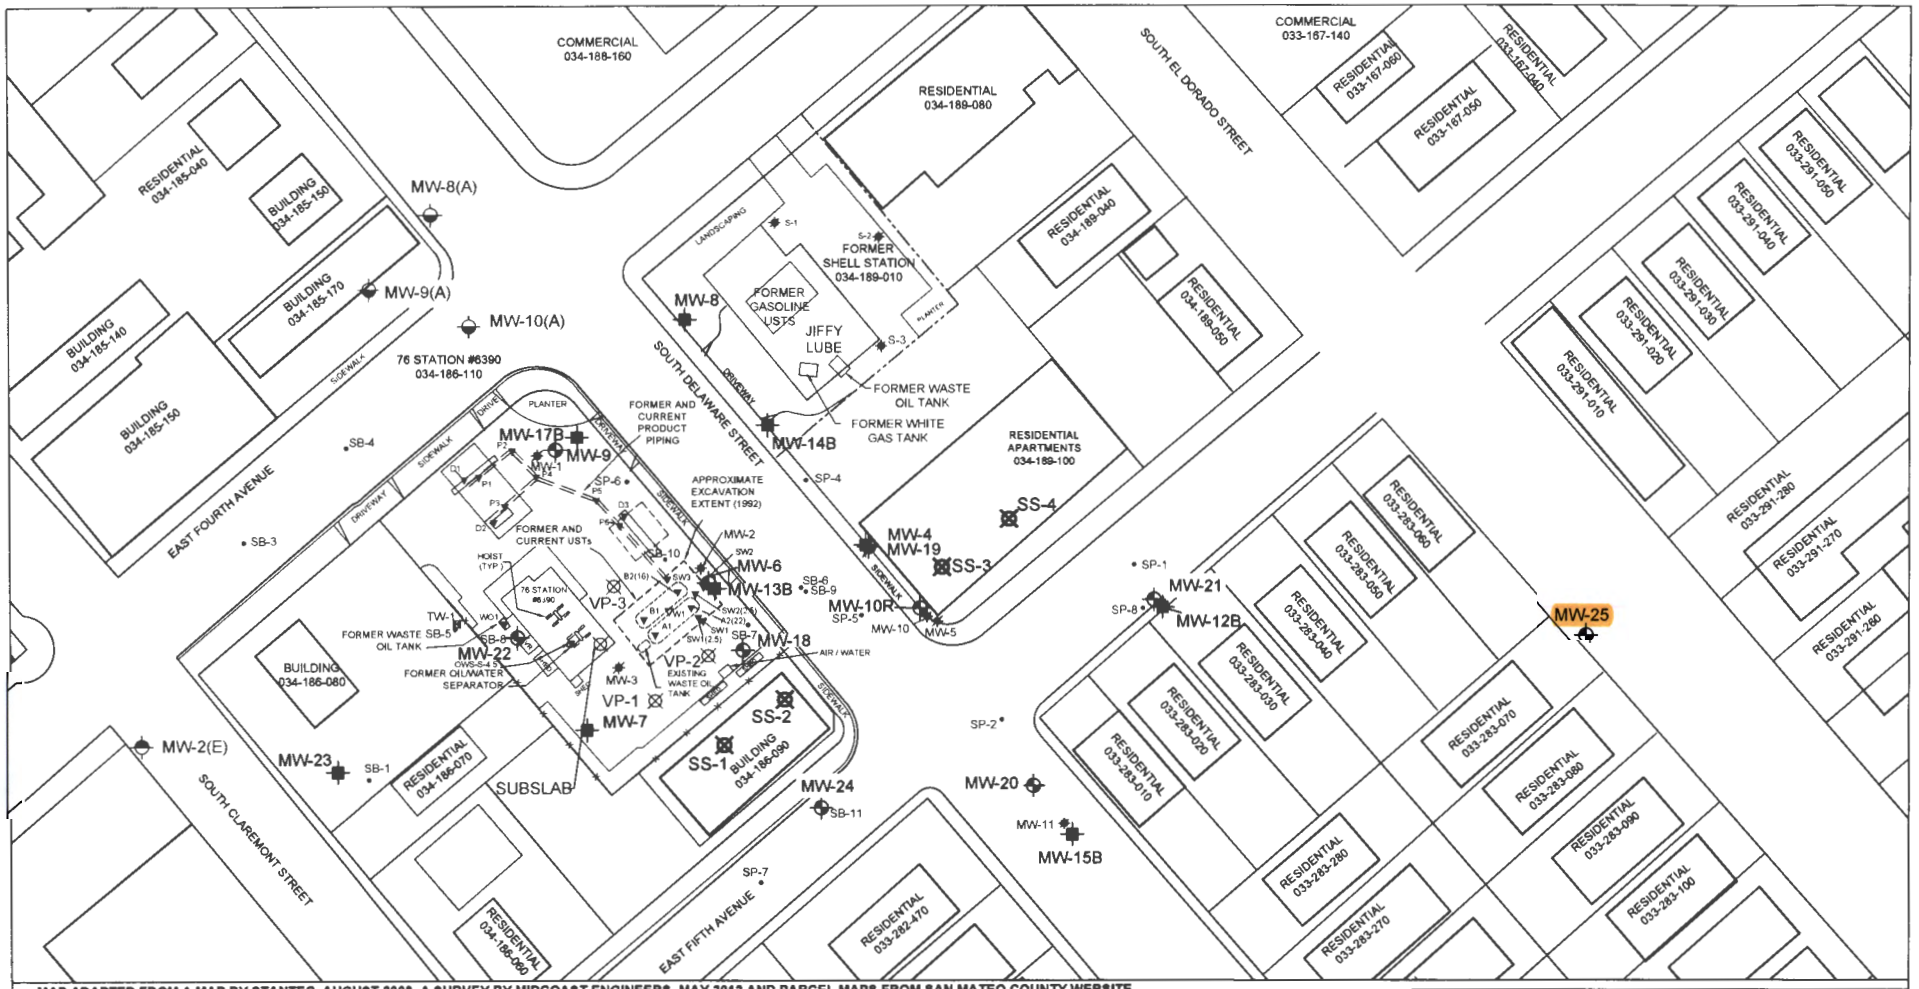
FA660314

SUBSURFACE DRILLING PERMIT APPLICATION

REQUIREMENTS:

An accurate and correct map **must** be submitted with the application and include the following: north arrow, existing and historic site features, existing and proposed well/boring locations with ID's to scale, property lines and any other pertinent information. A work plan describing the drilling and construction/destruction methodology may be requested by County staff. A complete application with appropriate fees must be submitted 3 working days in advance of drilling and notification of start date and time must be provided at least 2 working days prior to drilling. The permit is subject to both General and Special Conditions stated below. A copy of the approved Subsurface Drilling Permit **must** be available on site while work related to the permit is being performed. **Drilling may begin at the notified date and time whether County staff is present or not.**

GENERAL CONDITIONS:



A. Field notification must be provided to GPP drilling inspection staff at least 2 full working days prior to the start of drilling. GPP Caseworker also must be notified if site is associated with a remedial action case.
B. Well and boring construction and destruction under this permit are subject to the Standards for the Construction of Wells in San Mateo County, County Groundwater Protection Program (GPP) Guidelines, Policies & Procedures, the State Water Well Standards, and any instructions by a Health Department representative.
C. Well/Boring Owner, Driller, and Responsible Professional assume responsibility for all activities and uses under the permit, including compliance with Workmen's Compensation Laws, and indemnify, defend and save the County of San Mateo, its officers, agents and employees, free and harmless from any and all expense, cost, or liability in connection with or resulting from work or stopped-work associated with the permit, including, but not limited to, property damage, personal injury, wrongful death, and loss of income.
D. All borings **must** be properly destroyed (grouted/sealed) within 24 hours of drilling, unless special conditions are approved beforehand in writing as part of this permit, and must be continuously protected and stabilized.
E. Analytical results of all soil, vapor, and groundwater samples collected during the execution of drilling under this permit **must** be submitted to County GPP staff by the Responsible Professional within 60 days of sample collection. If contamination is discovered during drilling, verbal notification to County GPP by the Responsible Professional is **required** within 72 hours of discovery. Proper storage, labeling & disposal of investigation-derived residual wastes are the responsibility of the consultant unless stated otherwise contractually.
F. Boring logs, well construction details, and finalized as-built location map for all borings/ wells (except geotechnical borings) signed by a Responsible Professional, **must** be submitted to County GPP by the Responsible Professional within 60 days of drilling/construction/destruction. DWR Form 188 must be filed with the State per water code 13752.
G. Permit is valid only for the purpose specified herein. No change in purpose or required procedures, as described on this permit application, in the associated workplan, or in the special conditions below, will be allowed except upon written permission from the County. Construction aspects can be changed based on conditions encountered in the field.
H. **Permit is valid for one mobilization** associated with originally permitted boring/well locations only, including contingency locations, and is automatically canceled if not exercised, or if an extension is not applied for and granted within 120 days of the original permit issuance date. Failure to notify staff of cancellation or delay in start time will result in the Consultant being billed an Inspection Cancellation fee if GPP staff attempted to perform an inspection. Fees are listed at smchealth.org/ehfees
I. Wells installed under this permit may not be used for domestic, municipal, agricultural, or irrigation water supply.
J. All work performed **must** conform to Business and Profession Codes and State Water Well Standards.
K. Top-of-casing elevation of all wells **must** be surveyed to the nearest 0.01-foot relative to Mean Sea Level or NAVD88 and submitted to County GPP within 60 days of drilling, and to State GeoTracker as appropriate. Geotechnical wells are exempt from this requirement if a written variance from GPP is obtained prior to drilling.
L. Latitude and longitude of all wells **must** be surveyed with sub-meter accuracy relative to NAD83 and submitted to County GPP within 60 days of drilling, and to State GeoTracker as appropriate.
M. Violation of any requirement or general or special permit condition may result in an order by GPP staff to cease work under this permit, correct the violation, potentially re-permit the work as a new mobilization, and potential actions may be taken against the Well Owner, Property Owner, or Responsible Professional by GPP.

Notes:

ft = feet
in = inches
TOC = Top of Casing
NSVD = not surveyed
bgs = below ground surface
NA = not applicable

Shallow Zone wells - screened interval mostly in the upper 20 feet below grade
Deep Zone wells - screened interval mostly between 20 and 30 feet below grade
SS = stainless steel
PVC = polyvinyl chloride

[1] = TOC Elevations were surveyed to the North American Vertical Datum of 1988 (NAVD 88) on the following dates:

MW-1 through MW-5 – August 13, 2005 by Morrow Surveying
MW-6 through MW-9 – January 16, 2007 by Morrow Surveying
MW-10 through MW-15B – August 18, 2008 by Mid Coast Engineers
MW-17B - June 6, 2011 by Mid Coast Engineers
MW-10R, MW-18, MW-19 - May 25, 2012 by Mid Coast Engineers
MW-20 and MW-21 - May 16, 2013 by Morrow Surveying
MW-22, MW-23 and MW-24 - July 1, 2013 by Morrow Surveying

PLAN-4
TEMP TRAFFIC CONTROL PLAN

NOTES

- Traffic control shall conform with the most current CAMUTCD part 6 and/or Caltrans Standards
- One lane of traffic in each direction and all high volume turning lanes shall be maintained at all times on all streets at a minimum lane width of 10 feet.
- Contractor shall notify local authorities once signs are posted.
- All advanced warning signs shall be equipped with 2 (18" orange flags)
- Certified Traffic Control Workers shall have Type II vests, work shoes, and hard hats.
- Temporary no parking signs shall be placed a min of 72 hrs prior of work.
- Driveways shall be monitored and maintained at all times during work hours.
- Distance between sign and work area will be determined on speed limit.
- Roadway shall not be opened until safe for public use. All open trenches must be plated or backfilled prior to public usage.
- All Devices shall be removed when no longer required.

MEANING OF LETTER CODES ON TYPICAL APPLICATION DIAGRAMS — NOTES TABLE 6C-1

ROAD TYPE	DISTANCE BETWEEN SIGNS A	B	C
Urban (Low Speed) - 25 mph or less	100 ft	100 ft	100 ft
Urban (Low Speed) - 25 to 40 mph	250 ft	250 ft	250 ft
Urban (High Speed) - 40 mph	350 ft	350 ft	350 ft
Rural	500 ft	500 ft	500 ft
Expressway / Freeway	1,000 ft	1,500 ft	2,640 ft

SUBSURFACE DRILLING PERMIT APPLICATION

Allow three (3) full working days for processing a complete permit application which includes payment (one permit per parcel). Drilling start date & time must be scheduled with County staff at (650) 464-0047 or drilling@smcgov.org at least 2 full working days (i.e. 48 hours) in advance. Visit smchealth.org/ehfees for Groundwater Protection Program Fees

PURPOSE OF APPLICATION
☐ Groundwater Monitoring/Vapor Well Installation ☐ Construct Soil Borings (variance request if to be left open >24 hrs)
☒ Groundwater Monitoring/Vapor Well Destruction Extension of Permit # _____
No. of Wells 2 No. of Borings _____ Well/Boring Names MW-20, MW-15B

PURPOSE OF DRILLING
☒ Environmental ☐ Geotechnical

LEAD AGENCY
☒ County GPP (permit approval is not to be considered work plan approval)
☐ RWQCB/DTSC/USEPA (Provide approval letter) ☐ None (i.e. voluntary)

SITE / DRILLING INFORMATION

Agency Case # 11069 Assessor's Parcel # (required) Right of Way, S Delaware St (one per permit)
Drilling Location Address: 500 block of S Delaware St City: San Mateo Zip: 90808
To Be Constructed In: ☒ Public Property ☐ Private Property ☐ Refuse
Maximum Proposed Depth (wells/borings) 27 (feet) Drilling Method: Hollow Stem Auger
Boring Diameter: 8 inches Casing Diameter: 2 inches Filter Pack Interval: see table Screen Interval: see table
Destruction Method: ☐ Pressure Grouting (provide well construction logs and grout calcs)
(6 gallons water max/94 lb cement, up to 5% bentonite) ☒ Overdrilling (guide rods for total depth prior to starting required)

WELL BORING OWNER

(Well/boring owner name or contact person should match signature)

Name: Antea Group Contact Person: Layne Kortbein
Address: 5910 Rice Creek Pkwy City, State, Zip: Shoreview, MN 55418
Telephone: 651-697-5117 Email: Layne.Kortbein@anteagroup.com

It is my responsibility to notify the County of any known changes in the purpose of this well/boring from that which is indicated on this application, to submit indication of annual usage of wells to the County, and to maintain the well in good condition. *(Letter signed by well/boring owner/contact person, containing above language and attesting to knowledge of all permit requirements and conditions, may be substituted for signature.)*
Well/Boring Owner's/Contact Person's Signature: Layne Kortbein Date: 4/30/19

PROPERTY OWNER

(Name as appears on assessor's roles should match signature)

Name: City of San Mateo Right of Way Contact Person: Karen Magallanes
Address: 330 West 20th Avenue City, State, Zip: San Mateo, CA 94403
Telephone: 650-522-7576 Email: kmagallanes@cityofsanmateo.org

I understand that a well/boring is being installed on my property. I agree to notify the County and Well Owner of any known damage or future access issues to the well *(Letter signed by property owner, containing above language, or encroachment permit may be substituted for signature)*
Property Owner's Signature: _____ Date: _____

DRILLING COMPANY

Drilling Company: Gregg Drilling & Testing, Inc. Contact Person: Chris Pruner
Address: 950 Howe Road City, State, Zip: Martinez, CA 94553
Telephone: 925-313-5800 Email: cpruner@greggdrilling.com C57 Drillers License # 1044456
I certify that the well/boring will be constructed in compliance with the conditions of this permit (see reverse), the San Mateo County Well Ordinance, and the State Water Well Standards, and that the license listed above is considered current and active by the Contractors State License Board.
Driller's Signature: Chris Pruner Date: 4/29/19

CONSULTANT COMPANY

Consultant Company: Antea Group Project Manager: David Sisak
Address: 505 14th Street Suite 900 City, State, Zip: Oakland, CA 94612
Telephone: 510-588-8525 Email: David.Sisak@anteagroup.com
Field Contact & Cell # (if known): Layne Kortbein, 608-408-9954
I certify that this application is correct to the best of my knowledge and the well/boring will be constructed/destroyed in compliance with the conditions of this permit (see reverse), the San Mateo County Well Ordinance, and the State Water Well Standards. I understand that I am responsible for General Conditions E, F, K, and L of this permit and if I indicated the purpose of drilling is geotechnical, then no one will use the boring to collect any samples for environmental analyses. If there is a change in Responsible Professional, I will notify San Mateo County GPP staff.
Responsible Professional's Name (Please print legibly): Regina Bussard
Responsible Professional's Signature: Regina Bussard Date: 5-2-19
California Professional Geologist (PG) No. 8288 or Civil Engineer (PE) No. _____

REV. 05/2018

FA 66032

SUBSURFACE DRILLING PERMIT APPLICATION

REQUIREMENTS:

An accurate and correct map **must** be submitted with the application and include the following: north arrow, existing and historic site features, existing and proposed well/boring locations with ID's to scale, property lines and any other pertinent information. A work plan describing the drilling and construction/destruction methodology may be requested by County staff. A complete application with appropriate fees must be submitted 3 working days in advance of drilling and notification of start date and time must be provided at least 2 working days prior to drilling. The permit is subject to both General and Special Conditions stated below. A copy of the approved Subsurface Drilling Permit **must** be available on site while work related to the permit is being performed. **Drilling may begin at the notified date and time whether County staff is present or not.**

GENERAL CONDITIONS:

A. Field notification must be provided to GPP drilling inspection staff at least 2 full working days prior to the start of drilling. GPP Caseworker also must be notified if site is associated with a remedial action case.

B. Well and boring construction and destruction under this permit are subject to the Standards for the Construction of Wells in San Mateo County, County Groundwater Protection Program (GPP) Guidelines, Policies & Procedures, the State Water Well Standards, and any instructions by a Health Department representative.

C. Well/Boring Owner, Driller, and Responsible Professional assume responsibility for all activities and uses under the permit, including compliance with Workmen's Compensation Laws, and indemnify, defend and save the County of San Mateo, its officers, agents and employees, free and harmless from any and all expense, cost, or liability in connection with or resulting from work or stopped-work associated with the permit, including, but not limited to, property damage, personal injury, wrongful death, and loss of income.

D. All borings **must** be properly destroyed (grouted/sealed) within 24 hours of drilling, unless special conditions are approved beforehand in writing as part of this permit, and must be continuously protected and stabilized.

E. Analytical results of all soil, vapor, and groundwater samples collected during the execution of drilling under this permit **must** be submitted to County GPP staff by the Responsible Professional within 60 days of sample collection. If contamination is discovered during drilling, verbal notification to County GPP by the Responsible Professional is **required** within 72 hours of discovery. Proper storage, labeling & disposal of investigation-derived residual wastes are the responsibility of the consultant unless stated otherwise contractually.

F. Boring logs, well construction details, and finalized as-built location map for all borings/ wells (except geotechnical borings) signed by a Responsible Professional, **must** be submitted to County GPP by the Responsible Professional within 60 days of drilling/construction/destruction. DWR Form 188 must be filed with the State per water code 13752.

G. Permit is valid only for the purpose specified herein. No change in purpose or required procedures, as described on this permit application, in the associated workplan, or in the special conditions below, will be allowed except upon written permission from the County. Construction aspects can be changed based on conditions encountered in the field.

H. **Permit is valid for one mobilization** associated with originally permitted boring/well locations only, including contingency locations, and is automatically canceled if not exercised, or if an extension is not applied for and granted within 120 days of the original permit issuance date. Failure to notify staff of cancellation or delay in start time will result in the Consultant being billed an Inspection Cancellation fee if GPP staff attempted to perform an inspection. Fees are listed at smchealth.org/ehfees

I. Wells installed under this permit may not be used for domestic, municipal, agricultural, or irrigation water supply.

J. All work performed **must** conform to Business and Profession Codes and State Water Well Standards.

K. Top-of-casing elevation of all wells **must** be surveyed to the nearest 0.01-foot relative to Mean Sea Level or NAVD88 and submitted to County GPP within 60 days of drilling, and to State GeoTracker as appropriate. Geotechnical wells are exempt from this requirement if a written variance from GPP is obtained prior to drilling.

L. Latitude and longitude of all wells **must** be surveyed with sub-meter accuracy relative to NAD83 and submitted to County GPP within 60 days of drilling, and to State GeoTracker as appropriate.

M. Violation of any requirement or general or special permit condition may result in an order by GPP staff to cease work under this permit, correct the violation, potentially re-permit the work as a new mobilization, and potential actions may be taken against the Well Owner, Property Owner, or Responsible Professional by GPP.

Notes:

ft = feet
in = inches
TOC = Top of Casing
NSVD = not surveyed
bgs = below ground surface
NA = not applicable

Shallow Zone wells - screened interval mostly in the upper 20 feet below grade
Deep Zone wells - screened interval mostly between 20 and 30 feet below grade
SS = stainless steel
PVC = polyvinyl chloride

[1] = TOC Elevations were surveyed to the North American Vertical Datum of 1988 (NAVD 88) on the following dates:

MW-1 through MW-5 -- August 13, 2005 by Morrow Surveying
MW-6 through MW-9 -- January 16, 2007 by Morrow Surveying
MW-10 through MW-15B -- August 18, 2008 by Mid Coast Engineers
MW-17B - June 6, 2011 by Mid Coast Engineers
MW-10R, MW-18, MW-19 - May 25, 2012 by Mid Coast Engineers
MW-20 and MW-21 - May 16, 2013 by Morrow Surveying
MW-22, MW-23 and MW-24 - July 1, 2013 by Morrow Surveying

PLAN-2
TEMP TRAFFIC CONTROL PLAN

NOTES

- Traffic control shall conform with the most current CAMUTCD part 6 and/or Caltrans Standards
- One lane of traffic in each direction and all high volume turning lanes shall be maintained at all times on all streets at a minimum lane width of 10 feet.
- Contractor shall notify local authorities once signs are posted.
- All advanced warning signs shall be equipped with 2 (18" orange flags)
- Certified Traffic Control Workers shall have Type II vests, work shoes, and hard hats.
- Temporary no parking signs shall be placed a min of 72 hrs prior of work.
- Driveways shall be monitored and maintained at all times during work hours.
- Distance between sign and work area will be determined on speed limit.
- Roadway shall not be opened until safe for public use. All open trenches must be plated or backfilled prior to public usage.
- All Devices shall be removed when no longer required.

MUTCD TABLE 6C-1 — MEANING OF LETTER CODES ON TYPICAL APPLICATION DIAGRAMS

ROAD TYPE	DISTANCE BETWEEN SIGNS A	B	C
Urban (Low Speed) - 25 mph or less	100 ft	100 ft	100 ft
Urban (Low Speed) - 25 to 40 mph	250 ft	250 ft	250 ft
Urban (High Speed) - 40 mph	350 ft	350 ft	350 ft
Rural	500 ft	500 ft	500 ft
Expressway / Freeway	1,000 ft	1,500 ft	2,640 ft

SUBSURFACE DRILLING PERMIT APPLICATION

Allow three (3) full working days for processing a complete permit application which includes payment (one permit per parcel). Drilling start date & time must be scheduled with County staff at (650) 464-0047 or drilling@smcgov.org at least 2 full working days (i.e. 48 hours) in advance. Visit smchealth.org/ohfees for Groundwater Protection Program Fees

PURPOSE OF APPLICATION
☐ Groundwater Monitoring/Vapor Well Installation ☐ Construct Soil Borings (variance request if to be left open >24 hrs)
☒ Groundwater Monitoring/Vapor Well Destruction Extension of Permit #
No. of Wells 5 No. of Borings Well/Boring Names MW-8, 14B, 4, 19, 10R

PURPOSE OF DRILLING
☒ Environmental ☐ Geotechnical

LEAD AGENCY
☒ County GPP (permit approval is not to be considered work plan approval)
☐ RWQCB/DTSC/USEPA (Provide approval letter) ☐ None (i.e. voluntary)

SITE / DRILLING INFORMATION

Agency Case # 11069 Assessor's Parcel # (required) Right of Way, S Delaware St (one per permit)
Drilling Location Address: 400 block of S Delaware Street City: San Mateo Zip: 90808
To Be Constructed In: ☒ Public Property ☐ Private Property ☐ Refuse
Maximum Proposed Depth (wells/borings) 28.8 (feet) Drilling Method: Hollow Stem Auger
Boring Diameter: 8 inches Casing Diameter: 2 inches Filter Pack Interval: see table Screen Interval: see table
Destruction Method: ☐ Pressure Grouting (provide well construction logs and grout calcs)
(6 gallons water max/94 lb cement, up to 5% bentonite) ☒ Overdrilling (guide rods for total depth prior to starting required)

WELL/BORING OWNER

(Well/boring owner name or contact person should match signature)

Name: Antea Group Contact Person: Layne Kortbein
Address: 5910 Rice Creek Pkwy City, State, Zip: Shoreview, MN 55418
Telephone: 651-697-5117 Email: Layne.Kortbein@anteagroup.com

It is my responsibility to notify the County of any known changes in the purpose of this well/boring from that which is indicated on this application, to submit indication of annual usage of wells to the County, and to maintain the well in good condition. *(Letter signed by well/boring owner/contact person, containing above language and attesting to knowledge of all permit requirements and conditions, may be substituted for signature.)*
Well/Boring Owner's/Contact Person's Signature: Layne Kortbein Date: 4/30/19

PROPERTY OWNER

(Name as appears on assessor's roles should match signature)

Name: City of San Mateo Right of Way Contact Person: Keren Magallanes
Address: 330 West 20th Avenue City, State, Zip: San Mateo, CA 94403
Telephone: 650-522-7576 Email: kmagallanes@cityofsanmateo.org

I understand that a well/boring is being installed on my property. I agree to notify the County and Well Owner of any known damage or future access issues to the well *(Letter signed by property owner, containing above language, or encroachment permit may be substituted for signature)*
Property Owner's Signature: Date:

DRILLING COMPANY

Drilling Company: Gregg Drilling & Testing, Inc. Contact Person: Chris Pruner
Address: 950 Howe Road City, State, Zip: Martinez, CA 94553
Telephone: 925-313-5800 Email: cpruner@greggdrilling.com C57 Drillers License 1044456

I certify that the well/boring will be constructed in compliance with the conditions of this permit (see reverse), the San Mateo County Well Ordinance, and the State Water Well Standards, and that the license listed above is considered current and active by the Contractors State License Board.
Driller's Signature: Date: 4/29/19

CONSULTANT COMPANY

Consultant Company: Antea Group Project Manager: David Sisak
Address: 505 14th Street Suite 900 City, State, Zip: Oakland, CA 94612
Telephone: 510-588-8625 Email: David.Sisak@anteagroup.com
Field Contact & Cell # (if known): Layne Kortbein, 608-408-9954

I certify that this application is correct to the best of my knowledge and the well/boring will be constructed/destroyed in compliance with the conditions of this permit (see reverse), the San Mateo County Well Ordinance, and the State Water Well Standards. I understand that I am responsible for General Conditions E, F, K, and L of this permit and if I indicated the purpose of drilling is geotechnical, then no one will use the boring to collect any samples for environmental analyses. If there is a change in Responsible Professional, I will notify San Mateo County GPP staff.
Responsible Professional's Name (Please print legibly): Regina Bussard
Responsible Professional's Signature: Date: 5-2-19
California Professional Geologist (PG) No. 8288 or Civil Engineer (PE) No.

REV. 09/2010

FA660033

SUBSURFACE DRILLING PERMIT APPLICATION

REQUIREMENTS:

An accurate and correct map **must** be submitted with the application and include the following: north arrow, existing and historic site features, existing and proposed well/boring locations with ID's to scale, property lines and any other pertinent information. A work plan describing the drilling and construction/destruction methodology may be requested by County staff. A complete application with appropriate fees must be submitted 3 working days in advance of drilling and notification of start date and time must be provided at least 2 working days prior to drilling. The permit is subject to both General and Special Conditions stated below. A copy of the approved Subsurface Drilling Permit **must** be available on site while work related to the permit is being performed. **Drilling may begin at the notified date and time whether County staff is present or not.**

GENERAL CONDITIONS:

A. Field notification must be provided to GPP drilling inspection staff at least 2 full working days prior to the start of drilling. GPP Caseworker also must be notified if site is associated with a remedial action case.

B. Well and boring construction and destruction under this permit are subject to the Standards for the Construction of Wells in San Mateo County, County Groundwater Protection Program (GPP) Guidelines, Policies & Procedures, the State Water Well Standards, and any instructions by a Health Department representative.

C. Well/Boring Owner, Driller, and Responsible Professional assume responsibility for all activities and uses under the permit, including compliance with Workmen's Compensation Laws, and indemnify, defend and save the County of San Mateo, its officers, agents and employees, free and harmless from any and all expense, cost, or liability in connection with or resulting from work or stopped-work associated with the permit, including, but not limited to, property damage, personal injury, wrongful death, and loss of income.

D. All borings **must** be properly destroyed (grouted/sealed) within 24 hours of drilling, unless special conditions are approved beforehand in writing as part of this permit, and must be continuously protected and stabilized.

E. Analytical results of all soil, vapor, and groundwater samples collected during the execution of drilling under this permit **must** be submitted to County GPP staff by the Responsible Professional within 60 days of sample collection. If contamination is discovered during drilling, verbal notification to County GPP by the Responsible Professional is **required** within 72 hours of discovery. Proper storage, labeling & disposal of investigation-derived residual wastes are the responsibility of the consultant unless stated otherwise contractually.

F. Boring logs, well construction details, and finalized as-built location map for all borings/ wells (except geotechnical borings) signed by a Responsible Professional, **must** be submitted to County GPP by the Responsible Professional within 60 days of drilling/construction/destruction. DWR Form 188 must be filed with the State per water code 13752.

G. Permit is valid only for the purpose specified herein. No change in purpose or required procedures, as described on this permit application, in the associated workplan, or in the special conditions below, will be allowed except upon written permission from the County. Construction aspects can be changed based on conditions encountered in the field.

H. **Permit is valid for one mobilization** associated with originally permitted boring/well locations only, including contingency locations, and is automatically canceled if not exercised, or if an extension is not applied for and granted within 120 days of the original permit issuance date. Failure to notify staff of cancellation or delay in start time will result in the Consultant being billed an Inspection Cancellation fee if GPP staff attempted to perform an inspection. Fees are listed at smchealth.org/ehfees

I. Wells installed under this permit may not be used for domestic, municipal, agricultural, or irrigation water supply.

J. All work performed **must** conform to Business and Profession Codes and State Water Well Standards.

K. Top-of-casing elevation of all wells **must** be surveyed to the nearest 0.01-foot relative to Mean Sea Level or NAVD88 and submitted to County GPP within 60 days of drilling, and to State GeoTracker as appropriate. Geotechnical wells are exempt from this requirement if a written variance from GPP is obtained prior to drilling.

L. Latitude and longitude of all wells **must** be surveyed with sub-meter accuracy relative to NAD83 and submitted to County GPP within 60 days of drilling, and to State GeoTracker as appropriate.

M. Violation of any requirement or general or special permit condition may result in an order by GPP staff to cease work under this permit, correct the violation, potentially re-permit the work as a new mobilization, and potential actions may be taken against the Well Owner, Property Owner, or Responsible Professional by GPP.

NOTES

- Traffic control shall conform with the most current CAMUTCD part 6 and/or Caltrans Standards
- One lane of traffic in each direction and all high volume turning lanes shall be maintained at all times on all streets at a minimum lane width of 10 feet.
- Contractor shall notify local authorities once signs are posted.
- All advanced warning signs shall be equipped with 2 (18" orange flags)
- Certified Traffic Control Workers shall have Type II vests, work shoes, and hard hats.
- Temporary no parking signs shall be placed a min of 72 hrs prior of work.
- Driveways shall be monitored and maintained at all times during work hours.
- Distance between sign and work area will be determined on speed limit.
- Roadway shall not be opened until safe for public use. All open trenches must be plated or backfilled prior to public usage.
- All Devices shall be removed when no longer required.

City of San Mateo Conditions:

NOTICING

- Notify affected property owners at a minimum of 5 BUSINESS DAYS prior to work describing work schedule with dates and provide on-site project manager and cell phone number prior to commencing work.
- Notices shall also be distributed, at a minimum, to affected addresses within a one block radius in all directions. Notice shall be sent to Downtown San Mateo Business Association.
- In the event that the work impedes pedestrian traffic to a business, notifications shall be presented IN PERSON to affected business owners or management. Applicant shall address and/or mitigate any concerns the businesses raise to the satisfaction of the business owner.

– Heavy equipment and vehicles shall be kept on paved surfaces at all times and not onto landscaped areas/islands/medians.
– Contractor/Applicant shall locate and protect and shall not damage existing utilities, street trees, heritage trees and tree roots.
– Any work on private property requires property owner approval/right of entry. This permit does not authorize work on private property.
– Landscaping restoration to existing or better conditions.
– Do not disturb tree roots greater than 1" in diameter. If tree root disturbance is necessary, contact City Arborist at (650) 522-7420.
– Parking striping to be restored to existing or better conditions.
– Lane closure on Delaware shall be allowed 9am-3:30pm.

Watch out for City Sewer and Storm Mains

CERTIFICATE OF LIABILITY INSURANCE

DATE (MM/DD/YYYY): 04/08/2019

THIS CERTIFICATE IS ISSUED AS A MATTER OF INFORMATION ONLY AND CONFERS NO RIGHTS UPON THE CERTIFICATE HOLDER. THIS CERTIFICATE DOES NOT AFFIRMATIVELY OR NEGATIVELY AMEND, EXTEND OR ALTER THE COVERAGE AFFORDED BY THE POLICIES BELOW. THIS CERTIFICATE OF INSURANCE DOES NOT CONSTITUTE A CONTRACT BETWEEN THE ISSUING INSURER(S), AUTHORIZED REPRESENTATIVE OR PRODUCER, AND THE CERTIFICATE HOLDER.

IMPORTANT: If the certificate holder is an ADDITIONAL INSURED, the policy(ies) must have ADDITIONAL INSURED provisions or be endorsed. If SUBROGATION IS WAIVED, subject to the terms and conditions of the policy, certain policies may require an endorsement. A statement on this certificate does not confer rights to the certificate holder in lieu of such endorsement(s).

THIS ENDORSEMENT CHANGES THE POLICY. PLEASE READ IT CAREFULLY.

ADDITIONAL INSURED – OWNERS, LESSEES OR CONTRACTORS – COMPLETED OPERATIONS

This endorsement modifies insurance provided under the following:

COMMERCIAL GENERAL LIABILITY COVERAGE PART
PRODUCTS/COMPLETED OPERATIONS LIABILITY COVERAGE PART

SCHEDULE

Name Of Additional Insured Person(s) Or Organization(s)	Location And Description Of Completed Operations
As REQUIRED BY WRITTEN CONTRACT OR AGREEMENTANY PERSON OR ORGANIZATION THAT YOU ARE REQUIRED IN A WRITTEN CONTRACT OR WRITTEN AGREEMENT TO INCLUDE AS AN ADDITIONAL INSURED PROVIDED THE "BODILY INJURY" OR "PROPERTY DAMAGE" OCCURS SUBSUQUENT TO THE EXECUTION OF THE WRITTEN CONTRACT OR WRITTEN AGREEMENT	**VARIOUS**
Information required to complete this Schedule, if not shown above, will be shown in the Declarations.	

A. **Section II – Who Is An Insured** is amended to include as an additional insured the person(s) or organization(s) shown in the Schedule, but only with respect to liability for "bodily injury" or "property damage" caused, in whole or in part, by "your work" at the location designated and described in the Schedule of this endorsement performed for that additional insured and included in the "products-completed operations hazard".

However:

1. The insurance afforded to such additional insured only applies to the extent permitted by law; and

2. If coverage provided to the additional insured is required by a contract or agreement, the insurance afforded to such additional insured will not be broader than that which you are required by the contract or agreement to provide for such additional insured.

B. With respect to the insurance afforded to these additional insureds, the following is added to **Section III – Limits Of Insurance:**

If coverage provided to the additional insured is required by a contract or agreement, the most we will pay on behalf of the additional insured is the amount of insurance:

1. Required by the contract or agreement; or

2. Available under the applicable Limits of Insurance shown in the Declarations;

whichever is less.

This endorsement shall not increase the applicable Limits of Insurance shown in the Declarations.

© Insurance Services Office, Inc., 2012

THIS ENDORSEMENT CHANGES THE POLICY. PLEASE READ IT CAREFULLY.

ADDITIONAL INSURED – OWNERS, LESSEES OR CONTRACTORS – SCHEDULED PERSON OR ORGANIZATION

This endorsement modifies insurance provided under the following:

COMMERCIAL GENERAL LIABILITY COVERAGE PART

SCHEDULE

Name Of Additional Insured Person(s) Or Organization(s)	Location(s) Of Covered Operations
ANY PERSON OR ORGANIZATION THAT YOU ARE REQUIRED IN A WRITTEN CONTRACT OR WRITTEN AGREEMENT TO INCLUDE AS AN ADDITIONAL INSURED PROVIDED THE "BODILY INJURY" OR "PROPERTY DAMAGE" OCCURS SUBSUQUENT TO THE EXECUTION OF THE WRITTEN CONTRACT OR WRITTEN AGREEMENT	**VARIOUS**
Information required to complete this Schedule, if not shown above, will be shown in the Declarations.	

A. **Section II – Who Is An Insured** is amended to include as an additional insured the person(s) or organization(s) shown in the Schedule, but only with respect to liability for "bodily injury", "property damage" or "personal and advertising injury" caused, in whole or in part, by:

1. Your acts or omissions; or

2. The acts or omissions of those acting on your behalf;

in the performance of your ongoing operations for the additional insured(s) at the location(s) designated above.

However:

1. The insurance afforded to such additional insured only applies to the extent permitted by law; and

2. If coverage provided to the additional insured is required by a contract or agreement, the insurance afforded to such additional insured will not be broader than that which you are required by the contract or agreement to provide for such additional insured.

B. With respect to the insurance afforded to these additional insureds, the following additional exclusions apply:

This insurance does not apply to "bodily injury" or "property damage" occurring after:

1. All work, including materials, parts or equipment furnished in connection with such work, on the project (other than service, maintenance or repairs) to be performed by or on behalf of the additional insured(s) at the location of the covered operations has been completed; or

© Insurance Services Office, Inc., 2012

2. That portion of "your work" out of which the injury or damage arises has been put to its intended use by any person or organization other than another contractor or subcontractor engaged in performing operations for a principal as a part of the same project.

C. With respect to the insurance afforded to these additional insureds, the following is added to **Section III – Limits Of Insurance:**

If coverage provided to the additional insured is required by a contract or agreement, the most we will pay on behalf of the additional insured is the amount of insurance:

1. Required by the contract or agreement; or

2. Available under the applicable Limits of Insurance shown in the Declarations;

whichever is less.

This endorsement shall not increase the applicable Limits of Insurance shown in the Declarations.

In the event coverage is cancelled for any statutorily permitted reason, other than nonpayment of premium, advanced written notice will be mailed or delivered to person(s) or entity(ies) according to the notification schedule shown below:

Name of Person(s) or Entity(ies)	Mailing Address:	Number of Days Advanced Notice of Cancellation:
Any Person(s) or Entity(ies) requiring by written contract that the Named Insured provide advanced written notice of cancellation. The Person or Entity must be listed on a spreadsheet from the broker that includes the name, contact, and a valid mailing address. This spreadsheet must be received by the Company within five days of the Company's request to the broker. Otherwise, the Company will bear no liability or responsibility for such advanced written notice of cancellation.		30 days

All other terms and conditions of the Policy remain unchanged.

This endorsement changes the policy to which it is attached and is effective on the date issued unless otherwise stated.

(The information below is required only when this endorsement is issued subsequent to preparation of the policy.)

Endorsement Effective 10/01/2018 Policy No. WEC003886106 Endorsement No.

SUBCONTRACTOR - ADDITIONAL EQUIPMENT:

EQUIPMENT DAMAGE:

WE CAN ASSUME NO RESPONSIBILITY FOR DAMAGE OF UNDERGROUND UTILITIES. In the event of adverse and/or hazardous drilling conditions, client will be informed if rate changes and/or responsibility for replacement of lost of damaged equipment. Minimum call out $1200. Also applicable to cancellations within 24 hrs. of scheduled start.

USA Clearance No._____

Section 13751 through 13754 of the California Water Code requires that a report be filed for every groundwater well installation or abandonment. If the client does not elect to submit this report, Gregg Drilling, LLC will complete the appropriate paperwork for a $20 fee per well.

Client to complete ☐ GD to complete ☐

The named parties are hereby notified that if charges for above labor, services, equipment or materials furnished or to be furnished are not paid for in full, the improved property referred to above may be subject to mechanics lien (per Section 1181, et. seq. to the California Code of Civil Procedure) and construction funds are subject to "Stop notice" action (per Section 1190.1, California Code of Civil Procedure).

TERMS: NET 30 days. 1.5% per month finance charge on accounts 30 days past due. The undersigned accepts the terms as stated above for services rendered.

Subject: RE: 8.5" Augers

Hello Allan,
It was nice talking to you.
The augers were 8" OD, but the person who wrote this up was accounting for the oversized auger bit.

Woodward Drilling has now expanded to add a Waste Water Treatment Facility
as well as Non-Haz / Haz Soil and Water Hauling, Please call or email for an estimate.
Certified 8(a)/DBE/WOSB/EDWOSB

Subject: 8.5" Augers

Good to talk to you again, Ryan. Here's the information I have for the well and you can see at the top of the boring log that it says 8.5". Let me know if you've got any insight on this…

Thanks,

Allan Dudding | Project Professional

Date:	Tuesday, June 18, 2019 11:55:18 AM

Hello,

Thank you for your email. My installers and I did not notice any type of sensors left on the floor. To answer your questions:
1. There was bare concrete on the floor when we started work (no existing finishes)
2. We installed self-leveling floor patch with a vapor barrier.
3. Glued down vinyl planks
4. We did not, I cannot speak for any other trades working in the building.

Regards,

Chris Javier

> Hi Chris!
>
> We spoke on the phone earlier this morning regarding the flooring Capital Flooring and Design completed at 521 E 5th Ave in San Mateo (Safari Kid Daycare). As I mentioned, we had two subslab vapor probes in the building when it was redesigned. I've attached two photos of what the probe should have looked like. Can you show that to the workers that were onsite and see if anyone noticed something similar to this while you were re-flooring, or possibly removed them? Also, I need a couple more details on the procedure and materials used. My questions are the following:
>
> 1. Was the foundation of the building ground down before flooring?

2. Was the foundation sealed or resurfaced in any way before laying the new flooring? If so, please note the type of sealant.
3. What was the type of new flooring that was installed?
4. Was any vapor sampling completed by you or an alternative contractor post-remodel?

Thank you so much for your help and contact me by phone or email with questions.

Good Morning Layne,

We started this project almost 2 yrs ago and before we came in there were 2 other contractor's before me that demoed the place and patched up a lot of areas of the flooring. The floor was wide open until 4 weeks ago and I did not see anything that is described. Sorry I couldn't be of any help.

Regards,
Ty Barber

Good Evening Ty,

I'm contacting you regarding the building remodel that you are completing at 521 E 5th Ave in San Mateo (Safari Kid Daycare). I'm working on the environmental cleanup site at the adjacent property located at 402 S Delaware St (76 Service Station). In 2013, we installed two subslab vapor pins in the floor of the now Safari Kid building. I've attached photos of what the pins should have looked like, although they also had black plastic caps as a cover. To your knowledge, during the remodel of the building, were these pins encountered and removed? Unfortunately I don't have a map of the exact locations of where these pins should have been. Also, was any vapor sampling completed by you or an alternative contractor post-remodel?

Thank you so much for your help and contact me by phone or email with questions.

Appendix H – Pacific Coast Locators, Inc. Utility Locate Report

Subsurface Investigation Report

Project:

Commercial Property
(Gas Station)
402 S. Delaware St.
San Mateo, CA

Prepared For:

Antea Group

Prepared By:

Pacific Coast Locators, Inc.
EM & GPR Technicians
2606 Foothill Blvd., Ste. G La Crescenta, CA 91214
Ph: 818-249-7700 Fax: 818-249-7701

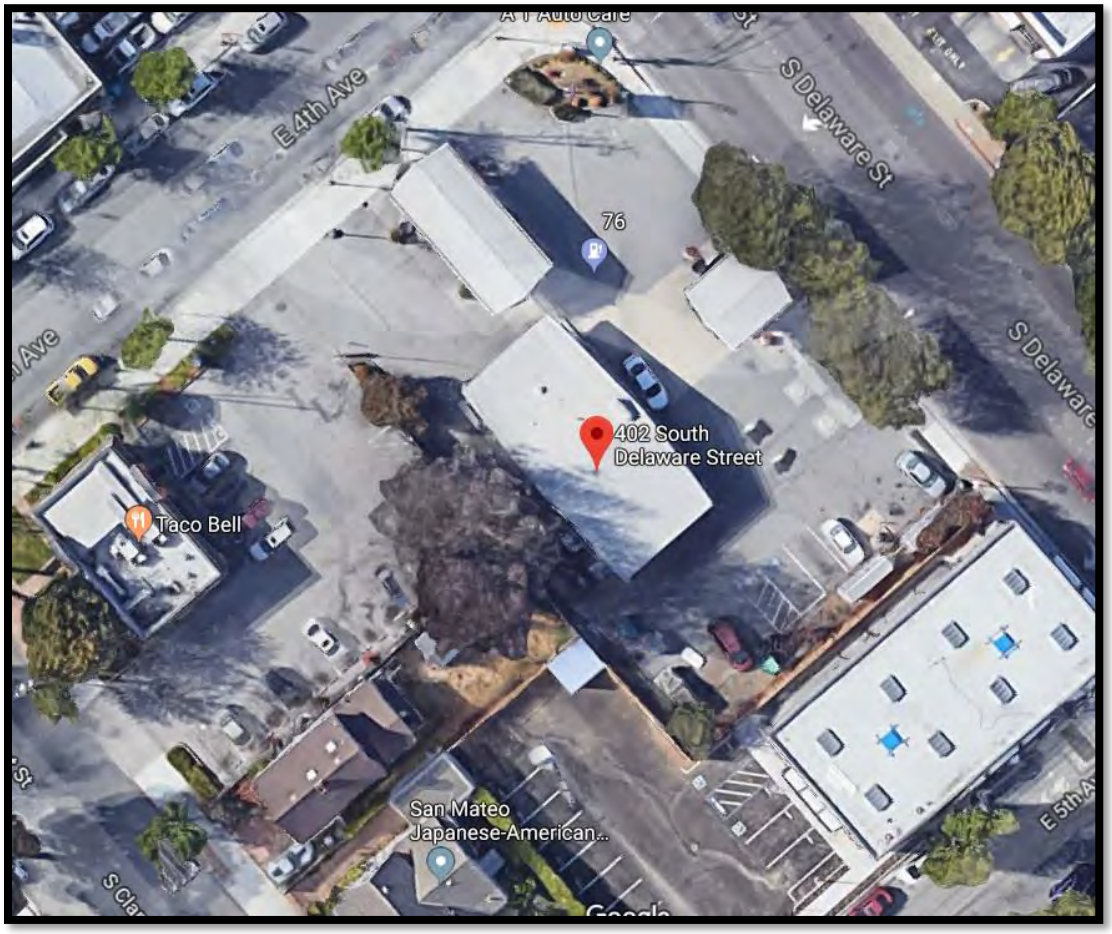
INTRODUCTION

Pacific Coast Locators, Inc. performed a Subsurface Investigation on Wednesday, July 3rd, 2019 to attempt to locate and confirm an old (possibly terra-cotta) sewer line on-site.

METHODOLOGY AND EQUIPMENT

The GSSI UtilityScan SIR 3000 Ground Penetrating Radar unit with 400MHz antenna sends a dielectric signal into the earth, which registers with the density of the soil that it is penetrating. Any other material of varied density will either speed up the signal creating an inverted hyperbola or slow it down leaving a hyperbola trail. This is similar to a rock in a creek. The water bends around the rock leaving a tail wake. The GPR signal is not bending however; it is sending back a continuous signal of the curvature of the anomaly or buried feature it encounters. GPR findings are not always accurate due to certain site conditions such as soil lithology, moisture and soil make-up. These can limit the depth to which the GPR antenna can penetrate to locate buried features.

The RD8100 Electro-Magnetic Transmitter & Receiver has Inductive & Conductive capability to locate buried conductive underground utilities, such as copper, steel and galvanized metal water pipes, electrical lines, power lines, tele-communication lines, metal and steel gas lines, and metal and steel pipelines. The RD8100 features include multiple active frequencies to delineate actively the depth and location of the target utility or pipe. The RD4000 receiver has a peak and null gain feature that pinpoints the target utility or pipe in congested areas. The audible signal to noise feature makes it easy for the locating technician to determine accurately the location of a directly connected utility or pipe by sound.



According to Radio Detection, the specifications of the RD8100 include
Sensitivity: 6E-15 Tesla 5µA at 1 meter (33kHz)
Dynamic range: 140dB rms/√Hz
Selectivity: 120dB/Hz
Depth measurement precision: ± 3%
Locate accuracy: ± 5% of depth

The Jameson Duct Hunter 300 Traceable Rodder uses the RD8100 transmitter to energize the rod which is pushed into underground pipe to emit signal that is picked up by the RD8100 receiver above ground. This allows an entire buried utility pipe to be traced and marked continuously from above ground by one man without digging. The rod's ferrule attaches to a 512 Mhz sonde, roller guide, or pulling eye. 5/16" diameter rod has 6" bend radius and is recommended for 2"- 4" conduit.

The Schonstedt GA-52Cx Magnetic Locator detects iron and steel objects underground, such as USTs, buried oil wells and buried metal monitoring well lids. The Schonstedt GA-52Cx Magnetometer provides audio detection signals with frequencies that vary with gradient field intensity. The signals peak in frequency when the locator's tip is held directly over the target.

SITE AREA

The project site is a gas station located at 402 S. Delaware St. in San Mateo, CA. Below is an aerial view of the property.

ANALYSES / INTERPRETATIONS AND FINDINGS

Our technician performed a Subsurface Investigation to attempt to locate and confirm an old (possibly terra-cotta) sewer line on-site. Our technician first attempted to remove the cleanout cap. He could not remove the cleanout cap and therefore performed GPR scanning in a grid pattern across the area. After multiple passes, evidence of a buried line was found. Upon further investigation of the area, including inside the building carport, the sanitary sewer line was identified and marked. Further GPR scanning inside of the carport area found several indications that the confirmed the anomaly found on the sidewalk is same sewer line found in carport.

Field work performed by Chris Montuya, EM & GPR Technician,
Pacific Coast Locators, Inc.

LIMITATIONS

Please be advised that there are limitations to any Subsurface Investigation. The equipment may not achieve maximum effectiveness due to soil conditions, above ground obstructions, reinforced concrete, and a variety of other factors. No Subsurface Investigation or equipment can provide a complete image of buried features. Our results should always be used in conjunction with as many methods as possible including: Consultation of existing plans and drawings, exploratory excavation or potholing, visual inspection of above ground features and utilization of services such as Dig Alert/Underground Service Alert.

Below are photos of marked-out findings on-site:

PLEASE BE ADVISED THAT YOU ARE RESPONSIBLE FOR THE FOLLOWING:

For making all inspection request. A minimum of 24 hours advance notice is required for all inspection performed by the Building Division. A minimum of 48 hours for all inspections performed by the Fire, Planning & Public Works Oepartments.
Please note this may not guarantee you the next business day inspection. Inspections are on a first call basis and a given number of inspections are allocated for each day.

When requesting a Building Inspection through our automated system, you will be required to provide the IVR# to schedule.

The day of a scheduled inspection, you may call the Building Division after 8:30 a.m. to receive a 2 hour timeframe of the scheduled inspection.

Inspections are performed Monday thru Friday 8:30a.m. to 5p.m.

Maintain all construction documents (approved plans, permit card) in a legible condition and ensure that they are at the job site for inspections.

Provide any and all equipment (ladders, lights, etc.) necessary to complete the inspection.

This permit becomes invalid if work is not commenced within 180 days after issuance, or if the work authorized on the site by such permit is suspended or abandoned for a period of 180-day after the time the work is commenced.

This permit does not include any construction within the Public Right of Way. Any construction in this area requires a separate permit from the Public Works Department.

Hours of Construction:

Monday-Friday:	**7:00a.m. - 7:00p.m.**
Saturday:	**9:00a.m. - 5:00p.m.**
Sunday	**12:00p.m. - 4:00p.m.**
Holiday	**12:00p.m. - 4:00p.m.**

Related Actions and Sub Permits Associated to Main Permit

Expiration Date: 01/09/2019 **Proposed Use:**

PERMIT EXPIRATION: This project becomes null and void if work is not commenced within 180 days from date of project issuance if work is suspended at any time for more than 180 days or if work is done in violation of any city or state laws relating thereto.

OWNER/BUILDER DECLARATION

I hereby affirm under penalty of perjury that I am exempt from the California Contractor's License Law for the following reason: (Business and Professions Code, Sec. 7031.5: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance also requires the applicant for such permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractor's License Law, Chapter 9 commencing, with Section 7000 of Division 3 of the Business and Professions Code, or that he or she is exempt from licensure and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500.):

(___) I, as OWNER of the property, or my employees with wages as their sole compensation, will do (___) all of or (___) portions of the work, and the structure is not intended or offered for sale. (Section 7044, Business and Professions Code: The Contractors' License Law does not apply to an DWNER of property who, through employees' or personal effort, builds or improves the property, provided that the improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the OWNER - BUILDER will have the burden of proving that he or she did not build or improve for the purpose of sale.)

(X) I, as owner of the property, am exclusively contracting with licensed Contractors to construct the project. (Section 7044, Business and Professions Code: The Contractors' License Law does not apply to an OWNER of property who contracts for the projects with a licensed Contractor pursuant to the Contractors' State License Law.)

(___) I am exempt from licensure under Contractors' State License Law for the following reasons:

By my signature below I acknowledge that, except for my personal residence in which I must have resided for at least one year prior to completion of the improvements covered by the permit, I cannot legally sell a structure that I have built as an owner-builder if it has not been constructed in its entirety by licensed contractors. I understand that a copy of the applicable law, Section 7044 of the Business and Professions Code, is available upon request and / or is available at the following website: http://www.leginfo.ca.gov/calaw.html.

Agoura Hills, CA 91301
Tel: 818-206-5700

Hello,

We have removed the old eight foot high chain link fence as requested by the City of San Mateo and replaced it with a eight foot 'Good Neighbor' fence at 521 E. 5th Ave. San Mateo which shares a fence with your gas station.
If you require photos, they can be emailed to you.
Please email me at bjohal777@gmail.com or call 415-678-6800

Thanks,

Barry Johal

Please sign below, giving your approval of the new fence.

Approval is contingent on Barry Johal incurring all costs associated with removal and replacement of the fence.

Signature: [signature] Date 6/13/18

PROPERTY OWNER-BUILDER
Form

VERSION 1.0 REVISED 01/20/15

PROPERTY OWNER'S PACKAGE

Disclosures & Forms for Owner-Builders Applying for Construction Permits

***IMPORTANT!* NOTICE TO PROPERTY OWNER**

Dear Property Owner:

An application for a building permit has been submitted in your name listing yourself as the builder of the property improvements specified at 521 E 5th Ave, San Mateo CA 94402 We are providing you with an Owner-Builder Acknowledgment and Information Verification Form to make you aware of your responsibilities and possible risk you may incur by having this permit issued in your name as the Owner-Builder. **We will not issue a building permit until you have read, initialed your understanding of each provision, signed, and returned this form to us at our official address indicated.** An agent of the owner cannot execute this notice unless you, the property owner, obtain the prior approval of the permitting authority.

OWNER'S ACKNOWLEDGMENT AND VERIFICATION OF INFORMATION

DIRECTIONS: Read and initial each statement below to signify you understand or verify this information.

_____ 1. I understand a frequent practice of unlicensed persons is to have the property owner obtain an "Owner- Builder" building permit that erroneously implies that the property owner is providing his or her own labor and material personally. I, as an Owner-Builder, may be held liable and subject to serious financial risk for any injuries sustained by an unlicensed person and his or her employees while working on my property. My homeowner's insurance may not provide coverage for those injuries. I am willfully acting as an Owner-Builder and am aware of the limits of my insurance coverage for injuries to workers on my property.

_____ 2. I understand building permits are not required to be signed by property owners unless they are *responsible* for the construction and are not hiring *a* licensed Contractor to assume this responsibility.

_____ 3. I understand as an "Owner-Builder" I am the responsible party of record on the permit. I understand that I may protect myself from potential financial risk by hiring a licensed Contractor and having the permit filed in his or her name instead of my own.

_____ 4. I understand Contractors are required by law to be licensed and bonded in California and to list their license numbers on permits and contracts.

_____ 5. I understand if I employ or otherwise engage any persons, other than California licensed Contractors, and the total value of my construction is at least five hundred dollars ($500), including labor and materials, I may be considered an "employer" under state and federal law.

_____ 6. I understand if I am considered an "employer" under state and federal law, I must register with the state and federal government, withhold payroll taxes, provide workers' compensation disability insurance, and contribute to unemployment compensation for each "employee." I also understand my failure to abide by these laws may subject me to serious financial risk.

_____ 7. I understand under California Contractors' State License Law, an Owner-Builder who builds single-family residential structures cannot legally build them with the intent to offer them for sale, unless *all* work is performed by licensed subcontractors and the number of structures does not exceed four within any calendar year, or all of the work is performed under contract with a licensed general building Contractor.

_____ 8. I understand as an Owner-Builder if I sell the property for which this permit is issued, I may be held liable for any

financial or personal injuries sustained by any subsequent owner(s) that result from any latent construction defects in the workmanship or materials.

___9. I understand I may obtain more information regarding my obligations as an "employer" from the Internal Revenue Service, the United States Small Business Administration, the California Department of Benefit Payments, and the California Division of Industrial Accidents. I also understand I may contact the California Contractors' State License Board (CSLB) at 1-800-321-CSLB (2752) or www.cslb.ca.gov for more information about licensed contractors.

___10. I am aware of and consent to an Owner-Builder building permit applied for in my name, and understand that I am the party legally and financially responsible for proposed construction activity at the following address:
521 E 5TH AVE, SM. CA 94402

___11. I agree that, as the party legally and financially responsible for this proposed construction activity, I will abide by all applicable laws and requirements that govern Owner-Builders as well as employers.

___12. I agree to notify the issuer of this form immediately of any additions, deletions, or changes to any of the information I have provided on this form. Licensed contractors are regulated by laws designed to protect the public. If you contract with someone who does not have a license, the Contractors' State License Board may be unable to assist you with any financial loss you may sustain as a result of a complaint. Your only remedy against unlicensed Contractors may be in civil court. It is also important for you to understand that if an unlicensed Contractor or employee of that individual or firm is injured while working on your property, you may be held liable for damages. If you obtain a permit as Owner-Builder and wish to hire Contractors, you will be responsible for verifying whether or not those Contractors are properly licensed and the status of their workers' compensation insurance coverage.

Before a building permit can be issued, this form must be completed and signed by the property owner and returned to the agency responsible for issuing the permit. ***Note: A copy of the property owner's driver's license, form notarization, or other verification acceptable to the agency is required to be presented when the permit is issued to verify the property owner's signature.***

Signature of property owner _____ Date: 2/9/18

Note: The following Authorization Form is required to be completed by the property owner only when designating an agent of the property owner to apply for a construction permit for the Owner-Builder.

AUTHORIZATION OF AGENT TO ACT ON PROPERTY OWNER'S BEHALF

Excluding the Notice to Property Owner, the execution of which I understand is my personal responsibility, I hereby authorize the following person(s) to act as my agent(s) to apply for, sign, and file the documents necessary to obtain an Owner-Builder Permit for my project.

Scope of Construction Project (or Description of Work): _____

Project Location or Address: _____

Name of Authorized Agent: _____ Tel No _____

Address of Authorized Agent: _____

I declare under penalty of perjury that I am the property owner for the address listed above and I personally filled out the above information and certify its accuracy. *Note: A copy of the owner's driver's license, form notarization, or other verification acceptable to the agency is required to be presented when the permit is issued to verify the property owner's signature.*

Issued Date: 10/06/2017 **Previous Use:** Offices

Expiration Date: 04/04/2018 **Proposed Use:** Offices

PERMIT EXPIRATION: This project becomes null and void if work is not commenced within 180 days from date of project issuance if work is suspended at any time for more than 180 days or if work is done in violation of any city or state laws relating thereto.

WHO WILL PERFORM THE WORK:
CALIFORNIA LICENSED CONTRACTOR'S DECLARATION

I hereby affirm under penalty of perjury that I am licensed under provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

License Class and No. California State License - Contractor - 806216

Print Name: TERRY YOW Contractor Signature: [signature]

WORKER'S COMPENSATION DECLARATION :

WARNING: FAILURE TO SECURE WORKERS' COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000), IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

I hereby affirm under penalty of perjury one of the following declarations:

( ) I have and will maintain a certificate of consent to self-insure for Workers' Compensation, issued by the Department of Labor Relations as provided for by Section 3700 of the Labor Code, for the performance of work for which this permit is issued. Policy #: _____

(X) I have and will maintain Workers' Compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My Worker's Compensation Insurance carrier and policy number are:
Carrier: SENTRY NATIONAL Policy #: SWC1142709 Expiration Date: 3/18

( ) I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that, if I should subsequently become subject to the worker's compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

DECLARATION REGARDING CONSTRUCTION LENDING AGENCY

I hereby affirm under penalty of perjury that there is a construction lending agency for the performance of the work for which this permit is issued (Section 3097, Civil Code).
LENDER'S NAME: LENDER'S ADDRESS: _____

SIGNATURES AND AGREEMENT

(X) I certify that I have read this application and state that the information given is complete and correct . I agree to comply with all local ordinances and state laws relating to building construction; and I make this statement and sign this agreement under penalty of law . I understand that all work performed under this permit must be inspected by the City, and the results of the inspections recorded on the project Inspection Record prior to the work being covered and concealed . I hereby authorize representatives of the City to enter upon the subject property for inspection purposes.

(X) Licensed Contractor ( ) Agent for Contractor ( ) Property Owner* ( ) Agent for Owner**

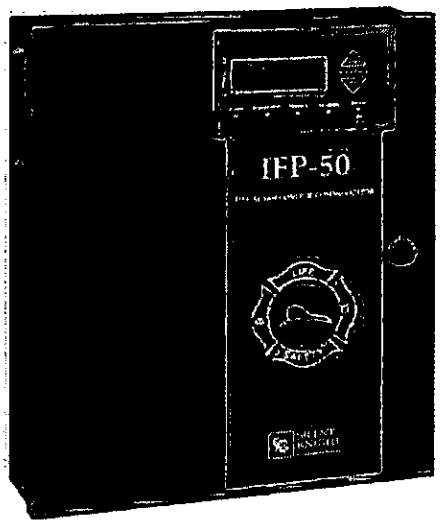
SILENT KNIGHT by Honeywell

Intelligent Fire Alarm Control Panel

IFP-50

IFP-50 is an intelligent analog/addressable fire control panel (FACP). IFP-50 has a single line circuit (SLC) loop for connecting addressable detectors and modules and has two notification appliance circuits that can be programmed for notification outputs or auxiliary power. IFP-50 also has a built-in dual line digital fire communicator, Form C trouble relay, and two programmable Form C relays. The firmware has powerful features such as detector sensitivity, day/night thresholds, drift compensation and pre-trouble maintenance alert.



IFP-50 supports a variety of other devices that can be added to the system such as RA-100 or RA-1000 remote annunciator, 5824 serial/parallel printer interface module (for printing system reports), and 5496 intelligent power module, and SD or IDP devices.

Features

- Built-in support for up to 50 SD devices or 50 IDP detectors and 50 IDP modules
- Uses standard wire—no shielded or twisted pair required
- Built-in digital communicator for remote reporting of system activity and system programming
- Central station reporting by point or by zone
- Jumpstart® auto-programming
- Supports Class B (Style 4) and Class A (Style 6 or Style 7) configuration for SLC
- Distributed, intelligent power
- Built-in synchronization for appliances from AMSECO, Gentex®, Faraday, System Sensor®, and Wheelock®
- Sensor sensitivity settings and day/night sensitivity setting and automatic drift compensation
- Notification circuits can be configured as 1 Class A (Style Z), 2 Class B (Style Y), or auxiliary power for resettable, constant, or door holder power
- Built-in annunciator with a backlit 80-character LCD display
- RS-485 bus provides communication to system accessories
- Built-in RS-232 interface for programming via PC
- Built-in Form C trouble relay rated at 2.5 amps at 24 VDC
- Two built-in Form C programmable relays rated at 2.5 amps at 24 VDC
- SLC device locator can be used to locate a single or multiple devices on a SLC loop
- System automatically performs detector sensitivity test
- 13 preset notification cadence patterns (including ANSI 3.41) and four user programmable patterns
- Upload or download programming, event history, or detector status onsite or from a remote location using a PC and 5650/5651 Silent Knight Software Suite (SKSS)
- Improvements in SKSS deliver five times faster upload/downloads
- Non volatile event history stores up to 1000 events
- 125 software zones and 125 output groups

Agency Listings

MEA 429-92-E Vol. XVI

IFP-50

- 2.5 amp power supply and maximum charging capacity of 35 amp hours (An additional cabinet enclosure is required for batteries in excess of 7 amp hours).
- Programmable date setting for Daylight Saving Time

Compatibility

The IFP-50 SLC supports multiple device types of the *same* protocol:

- SD
- IDP

You cannot mix SD and IDP devices on a FACP. However, any combination of addressable devices of the same protocol can be used on the IFP-50.

Specifications

Physical

Dimensions: 12.75"W x 15.2"H x 3.4"D
(36.8 W x 62.9 H x 9.8 D cm)

Weight: 11.5 lbs. (5.2 kg)

Color: Red

Environmental
Operating Temperature: 32°F – 120°F (0°C – 49°C)

Humidity: 10% – 93% non-condensing

Electrical
Primary AC: 120 VRMS @ 50/60 Hz, 2.7A

Total Accessory Load: 2.5A @ 27.4 VDC power-limited

Standby Current: 200 mA

Alarm Current: 365 mA

Battery Charging Capacity: 7 to 35 AH

Battery Size: 7 AH max. allowed in control panel cabinet. Larger capacity batteries can be housed in RBB accessory cabinet.

Notification Appliance Circuits
Two circuits that can be programmed individually as:
Notification Circuits: 2.5A per circuit @ 27.4 VDC, power-limited
Auxiliary Power Circuits: 2.5A per circuit @ 27.4 VDC, power-limited

Indicator Lights
Alarm (Red): Flashes when in alarm; solid when alarm silenced

Supervisory (Yellow): Flashes when a supervisory condition exists; solid when supervisory silenced

Trouble (Yellow): Flashes when a trouble condition exists; solid when trouble silenced

Silenced (Yellow): On when an alarm, trouble or supervisory condition has been silenced but not yet cleared

Power (Green): Flashes for AC failure; solid when power systems are normal

Telephone
Requirements: FCC Part 15 & Part 68 approved

Jack: RJ31X (two required)

Approvals
NFPA 13, NFPA 15, NFPA 16, NFPA 70, & NFPA 72: Central Station; Remote Signalling; Local Protective Signalling Systems; Auxiliary Protected Premises Unit; & Water Deluge Releasing Service. Suitable for automatic, manual, waterflow, sprinkler supervisory (DACT non-coded) signalling services.

Other Approvals: UL Listing; CSFM 170-0559: 144; MEA 429-92-E Vol XVI

Approved Releasing Solenoid

Manufacturer	Part Number	Rating
Asco	T8210A107	24 VDC, 2.5A
Asco	8210G207	24 VDC, 2.5A

Ordering Information

IFP-50	Intelligent Fire Alarm Control Panel.

SBUS Accessories

RA-100	Remote Annunciator. Similar in operation and appearance to FACP annunciator.
RA-1000	Remote Annunciator. Four line LCD annunciator with 20 characters per line. Gray.
RA-1000R	Remote Annunciator. Four line LCD annunciator with 20 characters per line. Red.
5496	Intelligent Power Module. 6 amp power module that provides four additional power limited notification appliance circuits.
5824	Serial/Parallel Printer Interface Module. Provides one parallel and one RS-232 serial port for connecting a printer to IFP-50.
5880	LED I/O Module. Provides 40 LED outputs, eight normally open dry contacts inputs and one piezo output.
5865-3 & 5865-4	LEO Fire Annunciators. Provides 30 programmable LED outputs and a piezo sounder.
5883	Relay Interface Board. Provides 10 general purpose Form C relays. Used with 5880.

SD and IDP Devices

See the specification sheets listed below for a complete listing of the SD and IOP devices.

350360	SO Devices data sheet
350361	Intelligent Device Protocol (IDP) Devices data sheet

Miscellaneous Accessories

5650/5651	Silent Knight Software Suite. Provides programming, upload/download, and event reporting. Order 5650 for PC parallel port compatibility or 5651 for PC USB port compatibility
5670	Silent Knight Software Suite. Provides facility monitoring
RBB	Remote Battery Box Accessory Cabinet. Use if backup batteries are too large to fit into FACP cabinet. Dimensions: 16" W x 10" H x 6" D (406 mm W x 254 mm H x 152 mm D)
SP-TR	Small panel trim ring. Use to flush mount the panel. 16.975" H x 14.630" W.

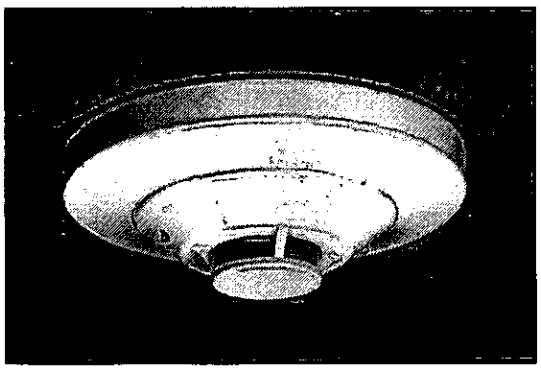
Intelligent Photoelectric Smoke Detector & Photoelectric Smoke with Thermal

IDP-Photo, IDP-Photo-T and IDP-PhotoR

The IDP-Photo is a photoelectric smoke detector and the IDP-Photo-T is a photoelectric smoke detector with thermal. These plug in smoke detectors, with integral communication, provide features that surpass conventional detectors and are for use with Silent Knight IFP-series fire alarm control panels (FACPs).

Detector sensitivity can be programmed from the FACP software. Sensitivity is continuously monitored and reported to the FACP. Point ID capability allows each detector's address to be set with rotary address switches, providing exact detector locations for selective maintenance when chamber contamination reaches unacceptable levels.



IDP-Photo and IDP-Photo-T have a unique optical sensing chamber that is engineered to sense smoke produced by a wide range of combustion sources. In the IDP-Photo-T, dual electronic thermistors add 135°F (57°C) thermal technology to maximize detection.

The IDP-PhotoR is a remote test capable detector for use with the DNR (W) duct smoke detectors.

Features

- Sleek, low-profile design
- Reliable analog communications for trouble-free operation
- Age resistant polymer housing
- Dual electronic thermistor design on the IDP-Photo-T
- Superior EMI resistance for reliability
- Simple field cleaning for code compliance
- Variety of mounting options to meet any application
- Dual LED indicators for 360° visibility
- Detector transmits signal to indicate maintenance is required
- Optional remote LED annunciator (System Sensor® PN RA100Z)
- Plug-in mounting provides ease of installation
- Tamper-proof feature available on mounting bases
- Listed for use in duct applications
- Rotary address switches for fast installation
- UL Listed

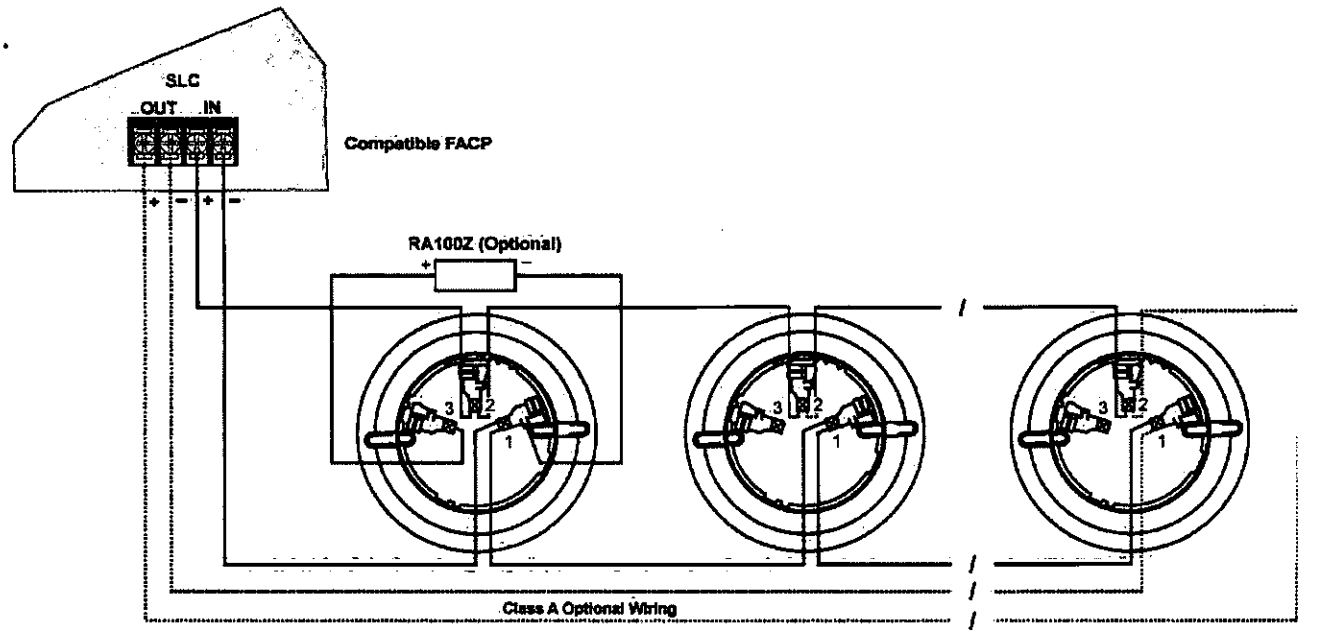
MEA
225-02-E Vol. V

IDP-Photo (Base not Included)

Installation

The IDP-Photo and IDP-Photo-T plug into a compatible IDP-series detector base. The IDP-PhotoR is a remote test capable detector for use with the DNR (W) duct smoke detectors

Compatibility



The IDP-Photo, IDP-Photo-T and IDP-PhotoR are compatible with the following IDP-series detector bases:

- B210LP 6" Mounting Base
- B501 4" Mounting Base
- B224BI 6" Isolator Base
- B224RB 6" Relay Base
- B200SR 6" Sounder Base

The IDP-Photo, IDP-Photo-T and IDP-PhotoR are compatible with the following FACPs:

- IFP-2000 / RPS-2000 Intelligent Fire Panel
- IFP-2000ECS Emergency Communication System with Fire Panel
- IFP-1000 / ECS Intelligent Fire Panel
- IFP-100 / ECS Intelligent Fire Panel
- IFP-50 Intelligent Fire Panel
- IFP-25 Intelligent Fire Panel

CALIFORNIA DEPARTMENT OF FORESTRY & FIRE PROTECTION
OFFICE OF THE STATE FIRE MARSHAL
FIRE ENGINEERING - BUILDING MATERIALS LISTING PROGRAM

LISTING SERVICE

LISTING No. 7272-0559:0149

CATEGORY: 7272 -- SMOKE DETECTOR-SYSTEM TYPE-PHOTOELECTRIC

LISTEE: SILENT KNIGHT SECURITY 1985 Douglas Drive, MN10-212A, Golden Valley, MN 55422
Contact: Michael McIsaac (763) 493-6400 Fax (763) 391-5464
Email: mike.mcisaac@honeywell.com

DESIGN: Models IDP-PHOTO, IDP-PHOTOR*, IDP-PHOTO-T, IDP-ACCLIMATE, SK-PHOTO, SK-PHOTOR*, SK-PHOTO-T and SK-ACCLIMATE photoelectric type smoke detectors. Model IDP-PHOTO-T employs a 1350F supplement integral heat sensor which only assists in a fire situation. This thermal circuitry is NOT approved for use in lieu of a required heat detector. Refer to listee's data sheet for additional detailed product description and operational considerations.

RATING: 24 VDC

INSTALLATION: In accordance with listee's printed installation instructions, applicable codes & ordinances and in manner acceptable to the authority having jurisdiction.

MARKING: Listee's name, product number, electrical rating and UL label.

APPROVAL: Listed as photoelectric type smoke detector for use with listee's separately listed compatible fire alarm control units and bases. All models are suitable for open areas and inside duct installations with air velocities between 0-4000 FPM. Models IDP-PHOTO and IDP-PHOTOR are approved for installations inside System sensor duct housing DNR (OSFM Listing No. 3242-1653:209) and DNRW (OSFM Listing No. 3242-1653:210)*. Models SK-PHOTO and SK-PHOTOR are approved for installations inside Silent Knight SK-DUCT (OSFM Listing No. 3242-0559:162) and System Sensor DNRW (OSFM Listing No. 3242-1653:210)*

NOTE: The photoelectric type detectors are generally more effective at detecting slow, smoldering fires that smolder for hours before bursting into flame. Sources of these fires may include cigarettes burning in couches or bedding. The ionization type detectors are generally more effective at detecting fast, flaming fires that consume combustible materials rapidly and spread quickly. Sources of these fires may include paper burning in a waste container or a grease fire in the kitchen.

Addressable Single Action and Dual Action Pull Stations

IDP-Pull-SA & IDP-Pull-DA

The IDP-Pull-SA is a single action pull station requiring only one motion to activate the station. The IDP-Pull-DA is a dual action pull station requiring two motions to active the station. Both pull stations are designed to work with Silent Knight IFP-series fire alarm control panels (FACPs).

Features

- Installer can open station without causing an alarm condition
- Dual-color LED is visible through handle of station blinks green to indicate normal operation and remains steady red in an alarm condition
- Key operated test and reset lock using lock plate actuator
- Key matches compatible FACP locks
- Meets the Americans with Disabilities Act Accessibility Guidelines (ADAAG) controls and operating mechanisms guidelines (Section 4.1.3[13])
- Meets ADA requirement for 5 lbs maximum pull force to active
- Shell, door, and handle molded from durable LEXAN®
- Reliable analog communications for trouble-free operation
- Braille text on station handle
- Handle latches in down position and the word *Activated* appears, clearly indicating the station has been pulled
- Rotary address switches for fast installation
- UL Listed, including UL 38, Standard of Manually Actuated Signaling System

Installation

The IDP-Pull-SA and IDP-Pull-DA can be surface mounted to an SB-I/O surface back box or semi-flush mounted on a standard single-gang with a minimum depth of 2.13"(5.40 cm) or double-gang or 4" (10.61 cm) square electrical box. You can also use the optional (System Sensor® PN BG-TR) trim ring if the station is being semi-flush mounted.

Wiring IDP-Pull-SA & IDP-Pull-DA Pull Stations

Specifications*

Physical

Height: 5.5" (14 cm)

Width: 4" (10.2 cm)

Depth: 5.4 oz. (3.7 cm)

Housing Material: LEXAN polycarbonate resin

Bi-Colored LED:
Blinking Green: Normal

Steady Red: Alarm

Switch: Single pole, single throw (SPST) normally open (N/O) switch which closes upon activation of the pull station

Electrical

Operating Voltage: 15–32 VDC

Operating Current (LED flashing): 300 µA

Wire Gauge: Up to 12 AWG (3.1 mm^2)

Environmental

Operating Temperature 32° – 120°F (0°C – 49°C)

Humidity: 10% – 93% non-condensing

Ordering Information

IDP-Pull-SA	Single Action Pull Station
IDP-Pull-DA	Dual Action Pull Station

Accessories

BG-TR	Optional trim ring.
SB-I/O	Surface backbox, indoor/outdoor.

* Unless otherwise noted, specifications apply to IDP-Pull-SA and IDP-Pull-DA.

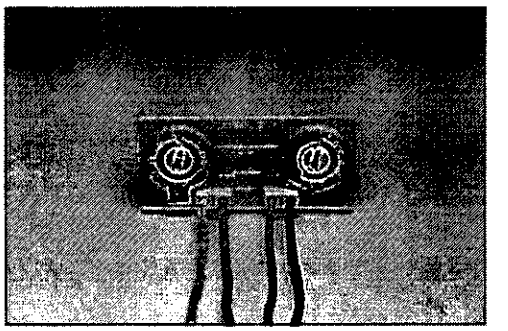
IDP-Minimon

The IDP-Minimon is a compact and light weight addressable monitor module for use with Silent Knight IFP-series fire alarm control panels (FACPs). The IDP-Minimon acts as an interface to contact devices, such as waterflow switches and pull stations.

The IDP-Minimon supports Class B supervised wiring to the load device. Conventional 4-wire smoke detectors can be monitored for alarm and trouble conditions.

Features



- Single contact monitor
- Small and lightweight size allows for flexible mounting options
- Support for Class B wiring
- Fully supervised
- Rotary address switches for fast installation
- Analog communications
- UL Listed

Installation

The IDP-Minimon can be mounted in a single gang junction box directly behind the monitored device. Its small size and light weight allow it to be installed without rigid mounting requirements.

SYSTEM SENSOR®

Outdoor Selectable-Output Horns, Strobes, and Horn Strobes for Wall Applications

SPECTRAlert ADVANCE from System Sensor

SpectrAlert® Advance outdoor audible visible products are rich with features that cut installation times and maximize profits.

Features

- Weatherproof per NEMA 4X, IP56
- Listed to UL 1638 (strobe) and UL 464 (horn)
- Compatible with System Sensor synchronization protocol and legacy SpectrAlert products
- Field-selectable candela settings: 15, 15/75, 30, 75, 95, 110, 115, 135, 150, 177, and 185
- Automatic selection of 12- or 24-volt operation at 15 and 15/75 candela
- Rotary switch for horn tone and three volume selections
- Horn rated at 88+ dBA at 16 volts
- Rated from –40°F to 151°F
- Universal mounting plate with an onboard shorting spring that tests wiring continuity before devices are installed
- Plug-in design with minimal intrusion into the back box
- Tamper-resistant construction
- Listed for ceiling or wall mounting

Agency Listings

SIGNALING UL LISTED
S4011 (chimes, horn strobes, horns)
S3593 (outdoor and alert strobes)

FM APPROVED
3023572

MEA approved
MEA452-05-E

7300-1653 187 (outdoor strobes)
7125-1653 188 (horn strobes, chime strobes)
7135-1653 189 (horns, chimes)

SpectrAlert Advance offers the broadest line of outdoor horns, strobes, and horn strobes in the industry. With white or red plastic housings, wall or ceiling mounting options, and plain or FIRE-printed devices, SpectrAlert Advance can meet virtually any application requirement, including indoor, outdoor, wet, and dry applications in temperatures from –40°F to 151°F.

Like the entire SpectrAlert Advance line, outdoor horns, strobes, and horn strobes for wall applications include a variety of features that increase application flexibility and simplify installation. First, field-selectable settings, including candela, automatic selection of 12- or 24-volt operation, horn tones, and three volume options enable installers to easily adapt devices to meet requirements.

Next, SpectrAlert Advance devices use a universal mounting plate for both wall and ceiling applications. This mounting plate includes an onboard shorting spring that ensures wiring continuity before devices are installed, so installers can verify proper wiring without mounting the devices and exposing them to potential construction damage. Once the plates are mounted, all SpectrAlert Advance devices utilize a plug-in design with a single captured screw to speed installation and virtually eliminate costly ground faults.

Outdoor devices ship with weatherproof plastic back boxes (metal back boxes are available separately) that accommodate in-and-out wiring for daisy chaining devices. Plastic back boxes feature removable side flanges and improved resistance to saltwater corrosion. Knock-outs located on the back eliminate the need to drill holes for screw-in mounting. Plastic and metal weatherproof back boxes come with ¾-inch top and bottom conduit entries and ¾-inch knock-outs at the back. A screw-in NPT plug with an O-ring gasket for a watertight seal is included with each back box.

SpectrAlert Advance Outdoor Horn, Strobe, and Horn Strobe Specifications

Architect/Engineer Specifications

General

SpectrAlert Advance outdoor horns, strobes, and horn strobes shall mount to a weatherproof back box. A universal mounting plate shall be used for mounting ceiling and wall products. The notification appliance circuit wiring shall terminate at the universal mounting plate. Also, SpectrAlert Advance products, when used with the Sync•Circuit™ Module accessory, shall be powered from a non-coded notification appliance circuit output and shall operate on a nominal 12 or 24 volts. When used with the Sync•Circuit Module, 12-volt-rated notification appliance circuit outputs shall operate between 9 and 17.5 volts; 24-volt-rated notification appliance circuit outputs shall operate between 17 and 33 volts. Outdoor SpectrAlert Advance products shall operate between –40 and 151 degrees Fahrenheit from a regulated DC or full-wave rectified unfiltered power supply. Strobes and horn strobes shall have field-selectable candela settings including 15, 15/75, 30, 75, 95, 110, 115, 135, 150, 177, and 185.

Strobe

The strobe shall be a System Sensor SpectrAlert Advance Model _____ listed to UL 1971 and shall be approved for fire protective service. The strobe shall be wired as a primary-signaling notification appliance and comply with the Americans with Disabilities Act requirements for visible signaling appliances, flashing at 1 Hz over the strobe's entire operating voltage range. The strobe light shall consist of a xenon flash tube and associated lens/reflector system. The strobe must be installed with its weatherproof back box in order to remain outdoor approved per UL. The strobe shall be suitable for use in wet environments.

Horn Strobe Combination

The horn strobe shall be a System Sensor SpectrAlert Advance Model _____ listed to UL 1971 and UL 464 and shall be approved for fire protective service. The horn strobe shall be wired as a primary-signaling notification appliance and comply with the Americans with Disabilities Act requirements for visible signaling appliances, flashing at 1 Hz over the strobe's entire operating voltage range. The strobe light shall consist of a xenon flash tube and associated lens/reflector system. The horn shall have three audibility options and an option to switch between a temporal three pattern and a non-temporal (continuous) pattern. These options shall be set by a multiple position switch. On four-wire products, the strobe shall be powered independently of the sounder. The horn or horn strobe models shall operate on a coded or non-coded power supply. The horn strobe must be installed with its weatherproof back box in order to remain outdoor approved per UL. The horn strobe shall be suitable for use in wet environments.

Physical/Electrical Specifications	
Operating Temperature	–40°F to 151°F (–40°C to 66°C)
Strobe Flash Rate	1 flash per second
Nominal Voltage	Regulated 12 DC/FWR or regulated 24 DC/FWR[1]
Operating Voltage Range[2]	8 to 17.5 V (12 V nominal) or 16 to 33 V (24 V nominal)
Input Terminal Wire Gauge	12 to 18 AWG
Wall-Mount Dimensions (including lens)	5.6"L x 4.7"W x 2.5"D (142 mm L x 119 mm W x 64 mm D)
Horn Dimensions	5.6"L x 4.7"W x 1.3"D (142 mm L x 119 mm W x 33 mm D)
Wall-Mount Weatherproof Back Box Dimensions (SA-WBB)	5.7"L x 5.1"W x 2.0"D (145 mm L x 130 mm W x 51 mm D)

Notes:

1. Full Wave Rectified (FWR) voltage is a non-regulated, time-varying power source that is used on some power supply and panel outputs.
2. P, S, PC, and SC products will operate at 12 V nominal only for 15 and 15/75 cd.

IPGSM-4G

Single or Dual Path Commercial Fire Communicator

General

The IPGSM-4G is a commercial fire alarm communicator that offers contact ID reporting with any Fire Alarm Control Panel (FACP) that has a built-in dialer. This *single* or *dual path* communicator connects directly to the primary and secondary communication ports of a fire panel's Digital Alarm Communicator Transmitter (DACT). It offers three selectable reporting paths which include: Cellular only, IP only, or IP primary/cellular backup. All signals from the IPGSM-4G are delivered to Honeywell's AlarmNet Network Control Center, which routes highly encrypted Ethernet data packets via a customer provided internet connection or cellular network to the appropriate central station. The state of the art AlarmNet network control center is fully redundant and monitored 24/7. AlarmNet has the ability to route messages using AlarmNet-I and 800 PLUS services, providing true redundancy and multipath message delivery.

Alternative communication methods are critical in the marketplace due to VoIP (Voice over IP), migration from POTS (Plain Old Telephone Service) and growth of digital radio networks. The IPGSM-4G's single path communications solution allows one technology to be used (either IP or cellular) to provide the appropriate connectivity to a central station. For added reliability, our exclusive dual path solution allows both technologies (IP and cellular) to be used together for maximum survivability or for local jurisdiction requirements that specify a dual technology system.

The IPGSM-4G is designed to operate over the most common cellular networks including 2G, 3G and 4G. Its multi-GSM platform technology automatically chooses the best available cellular signal in the area based on signal strength and seamlessly self-adjusts to maintain critical life safety communication. In addition, it connects to any type of customer provided Ethernet 10/100 base network connection (LAN or WAN), DSL model or cable modem. Our selectable reporting path feature allows the radio to be configured for a single or dual path solution as well as the appropriate supervision intervals based on NFPA 72 requirements. (See diagram below for selectable paths and supervision timing intervals.)

Selectable Path	Description	Supervision Times
2010 GSM	Single Path (cellular only)	5 minutes
2010 IP	Single Path (IP only)	5 minutes
2010 IP & GSM	Dual Path (IP and cellular)	24 hours
2013 GSM	Single Path (cellular only)	1 hour
2013 IP	Single Path (IP only)	1 hour
2013 IP & GSM	Dual Path (IP and cellular)	6 hours

Features

- Saves the cost of two dedicated phone lines.
- Single or dual path communications. (Can communicate to central station using cellular technology, internet or both.
- Requires no change to the existing Fire Alarm Control Panel configuration. (Connects directly to the primary and secondary telephone ports of a DACT.)
- Multi-GSM platform compatibility for 2G, 3G and 4G networks.
- Operates over the following communication protocols: HSPA+ (4G) HSPA (HSDPA & HSUPA) (3G) EDGE (2G) GPRS (2G).
- Selectable reporting paths and supervision intervals to meet NFPA 72, chapter 26 requirements. (Compliant with NFPA 72 2010 and 2013 supervision requirements.)
- Works over any type of customer provided Ethernet 10/100 based network connection (LAN or WAN), DSL modem or cable modem.
- Data transmits over standard contact-ID protocol but is secured with the industry's advanced encryption standard (AES 256 bit).
- Supports both dynamic (DHCP) or Public and Private Static IP addressing.
- Built-In Power Supply module: On board charging circuit design accommodates back-up battery. Includes primary power and battery supervision.
- Diagnostic LEDs: Signal strength and status indicators.
- Reliable connection: IP and GSM connection tested every day.
- QOS: Quality of Service diagnostics via AlarmNet conveys vital communicator information including when message was received, signal strength, and message path used.
- 7720P Hand-held programmer for easy setup.

Operation

When an event occurs, the Fire Alarm Control Panel goes off hook to dial the central station. The IPGSM-4G Dialer Capture Module detects the off-hook condition and provides the fire panel with a dial tone. When the fire panel detects the dial tone, it begins dialing the central station. After the dialing is completed, the Dialer Capture Module returns a handshake to the fire panel. The fire panel then sends the contact ID reports to the Dialer Capture Module, which in turn sends a kiss-off after the report is successfully received from the fire panel. The Dialer Capture Module sends the contact ID reports to the IPGSM communications module. When all the reports are sent, the fire panel goes on-hook. The IPGSM communications module then transmits the messages to the central station either over the GSM network or the Internet (dependent on configuration).

Easy to Program

The IPGSM-4G communicator can be pre-programmed using the 7720P programmer to enter all central-station information. This is saved to the IPGSM-4G communicator panel memory. When the IPGSM-4G communicator is installed at the site and connected to the internet/intranet, it registers itself with the AlarmNet receiver.

For most installations, the only required parameters are:

- Primary City ID (two digits) obtained from your monitoring station.
- Primary Central Station ID (two digits) obtained from your monitoring station.
- Primary Subscriber ID (four digits) obtained from your monitoring station.
- Communication Module's MAC ID, and MAC CRC number located on outside of box, and inside of the module.

All of these parameters are assigned by the monitoring station.

NOTE: *Some assembly is required. See Installation and Setup Guide #800-12454 for full details.*

Fire Communicator Capability

The IPGSM-4G is compatible with fire panels that use the Contact ID communications format as described in the SIA DC-05 standard.

AlarmNet

Honeywell's AlarmNet has been the nationwide leader in alarm communications technology since 1986. A reliable alternative for the transmission of alarm signals, our radio network provides extensive coverage in the United States and Canada. AlarmNet Network Control center processes signals from powerful servers in multiple locations equipped with 24/7 infrastructure support. The AlarmNet network consist of redundant hardware servers, hot back-up databases and generators with battery back-up at all locations to ensure continuity of service. Signals from Alarm-Net are transmitted to the central station's receivers using multiple communications paths consisting of the internet, radio network or toll-free POTS service.

Installation Requirements

UL COMPLIANCE

To meet UL864/NFPA, ensure the following:

- IPGSM-4G must be installed in accordance with NFPA (National Fire Protection Association) standards 70 and 72.
- IPGSM-4G must be mounted in the same room and within 20 feet of the fire panel.
- IPGSM-4G, and all equipment used for the IP connection (such as the router, hub, modem, etc.) shall be listed, must be powered from an un-switched branch circuit, and be provided with appropriate standby power.
- IPGSM-4G must use the 7AH battery (not supplied) to provide 24-hour backup capability.

Electrical Specifications

Transformer:

- Primary 120VAC, 60Hz, 0.5A.
- Secondary: 18VDC, 50VA.

Battery:

- One 12 V 7.0 AH lead-acid battery (not supplied).
- Battery charging current: 1 Amp maximum.
- Battery discharge current: Standby 230mA, Active 950mA.

Cabinet Specifications

Dimensions: 14.875" H x 12.75" W x 3.0" D (37.8 cm H x 32.4 cm W x 7.6 cm D).

Color: Red.

Shipping Specifications

Weight: 5.3 lbs. (6.94 kg).

Dimensions: 15.625" H x 13.79" W x 9.25" D (39.7 cm H x 34.9 cm W x 23.9 cm D)

Temperature and Humidity Ranges

This system meets NFPA requirements for operation at 0 - 49°C/32 - 120°F and at a relative humidity 93% ± 2% RH (non condensing at 32°C ± 2°C (90°F ± 3°F). However, the useful life of the system's standby batteries and the electronic components may be adversely affected by extreme temperature ranges and humidity. Therefore, it is recommended that this system and its peripherals be installed in an environment with a normal room temperature of 15 - 27°C/60 - 80°F.

Product Line Information

IPGSM-4G: Internet and Digital Cellular Fire Alarm Communicator Panel. Includes red cabinet with Ademco key and lock, wall outlet box, Dialer Capture Module, iGSM Communications Module, antenna & mounting adapter, PowerBoost1 power supply, LED display board, transformer, manual, & required screws, cables, etc.

Antenna Kits

GSM-ANT3DB25KT: 25 ft. antenna kit. Includes GSM-ANT3DB, WA7626-CA adapter cable, and a 25' RF cable.

GSM-ANT3DB50KT: 50 ft. antenna kit. Includes GSM-ANT3DB, WA7626-CA adapter cable, and a 50' RF cable.

Antenna External Hardware

GSM-ANT3DB: 3db gain external/remote antenna.

WA7626-CA: SNA to N Adapter.

7626-50HC: 50 ft. antenna cable, low loss.

7626-25HC: 25 ft. antenna cable, low loss.

NOTE: *The GSM-ANT3DB and the WA7626-CA are both required for installing an external antenna along with the necessary cable needed (7626-50HC: 50 ft. or 7626-25HC: 25 ft.)*

Other Accessories

7720P: IPGSM-4G hand held programmer.

HPTCOVER: Plug in transformer box for IPGSM communicator.

BAT-1270: Battery 12 Volts, 7 AH, sealed.

Agency Listings and Approvals

The listings and approvals below apply to the basic IPGSM-4G communicator panel. In some cases, certain modules may not be listed by certain approval agencies, or listing may be in process.

Consult factory for latest listing status.

UL Listed: S789.

CSFM: 7300-1645:0199.

FDNY: COA #6150.

CALIFORNIA DEPARTMENT OF FORESTRY & FIRE PROTECTION
OFFICE OF THE STATE FIRE MARSHAL
FIRE ENGINEERING - BUILDING MATERIALS LISTING PROGRAM

LISTING SERVICE

LISTING No. 7300-1645:0199

CATEGORY: 7300 – FIRE ALARM CONTROL UNIT ACCESSORIES/MISC. DEVICES

LISTEE: HONEYWELL SECURITY2 Corporate Center Dr, Ste. 100, Melville, NY 11747
Contact: Issa Khouryawad (516) 577-2312 Fax (516) 577-3540
Email: issa.khouryawad@Honeywell.com

DESIGN: Models iPGSM-COM, iPGSM-DP, iPGSM-4G and *IGSMCFP4G Internet and Digital Cellular Fire Communicators. Units are suitable for residential and commercial applications. Refer to listee's data sheet for detailed product description and operational considerations.

INSTALLATION: In accordance with listee's printed installation instructions, applicable codes & ordinances and in a manner acceptable to the authority having jurisdiction.

MARKING: Listee's name, model number, electrical rating, and UL label.

APPROVAL: Listed as a control unit accessory for use with separately listed compatible commercial and residential fire alarm control units. *Model IGSMCFP4G is intended for use with specific Honeywell Security control units that employ the ECP bus. Refer to listee's installation Instruction Manual for details.

NOTE: Burglary and other non-fire functions were not examined.

iPGSM-COM, iPGSM-DP formerly listed in 7300-1645:0183.

*Rev 07-01-14 gt

This listing is basad upon technical data submitted by tha applicant. CSFM Fire Engineering staff has reviewed the test results and/or other data but does not make an independent verification of any claims. This listing is not an endorsement or recommendation of the item listed. This listing should not be used to verify correct operational requirements or installation criteria. Refer to listee's data sheet, installation instructions and/or other

Date Issued: **July 01, 2017** *Listing Expires* **June 30, 2018**

San Francisco, CA 94103
4158853335

Work Description:

F3- Fire Sprinkler Monitoring System. Install 1 manual box, 1 pull station, 1 horn, and 2 switches. Total 5 devices
Comm. T.I in (E) Shell Spac Permit # 258827
PA-2016-23
→ REVISION #1: AS-BUILTS - ADD 3 (N) DEVICES (ISSUED 5/7/18)

PLEASE BE ADVISED THAT YOU ARE RESPONSIBLE FOR THE FOLLOWING:

For making all inspection request. A minimum of 24 hours advance notice is required for all inspection performed by the Building Division. A minimum of 48 hours for all inspections performed by the Fire, Planning & Public Works Departments.
Please nate this may not guarantee you the next business day inspection. Inspections ore on a first call basis and a given number of inspections are allocated for each day.

When requesting a Building Inspection through our automated system, you will be required to provide the IVR# to schedule.

The day of a scheduled inspection, you may call the Building Division after 9:00 a.m. to receive a 2 hour timeframe of the scheduled inspection.

Inspections are performed Monday thru Friday 9:00a.m. to 5p.m.

Maintain all construction documents (approved plans, permit card) in a legible condition and ensure that they are at the job site for inspections.

Provide any and all equipment (ladders, lights, etc.) necessary to complete the inspection.

This permit becomes invalid if work is not commenced within 180 days after issuance, or if the work authorized on the site by such permit is suspended or abandoned for a period of 180-day after the time the work is commenced.

This permit does not include any construction within the Public Right of Way. Any construction in this area requires a separate permit from the Public Works Department.

Hours of Construction:

Monday-Friday:	7:00a.m. - 7:00p.m.
Saturday:	9:00a.m. - 5:00p.m.
Sunday	12:00p.m. - 4:00p.m.
Holiday	12:00p.m. - 4:00p.m.

Related Actions and Sub Permits Associated to Main Permit

For Inspection Request Please Call:

Building:	(650) 522-7170 (IVR # Required)
Fire:	(650) 522-7940
Planning:	(650) 522-7202
Public Works:	(650) 522-7522 Ext- 6900

Storm Water Pollution Prevention (STOPPP) Inspections will need to call the Public Works Department to schedule:
- **STOPPP Pre-Construction Inspection &**
- **STOPPP Final Inspection**

Construction projects shall implement the San Mateo Countywide Water Pollution Prevention Program best management practices (BMP). These can be found at www.flowstobay.org/construction.

All projects associated with a Planning Application are required to call the Planning Department to schedule the following inspections:
- **Planning Rough Frame &**
- **Planning Final**

NOTE: THIS CARD AND APPROVED PLANS MUST BE KEPT DISPLAYED IN A CONSPICUOUS PLACE ON OR IN THE BUILDING WHERE THE SAME CAN BE READILY SEEN BY THE INSPECTORS. Inspections must be called for and made as required by Section 108.2 of the Uniform Administrative Code as adopted by the City of San Mateo.

SANITARY SEWER CONNECTION CHARGE

Commercial, Industrial, Church, and Golf Courses
(NON-RESIDENTIAL USES)

July 1,2016–June 30, 2017 FEE SCHEDULE AND WORKSHEET

The sewer connection fee is charged for construction of new buildings and the modification of existing buildings as noted below. The fee is collected prior to issuance of a building permit.

Churches and Golf Courses are charged a flat rate; other non-residential uses are charged based upon the fixture-units added by the project. A credit is allowed for each fixture-unit demolished by the project. An explanation of fixture-units and an example calculation is provided on the back of this worksheet.

Please use the chart below to calculate the connection fee for your project and bring the completed form to the building department. This fee calculation will become part of your building permit application.

			Remodel	New
Church/Golf Course	Flat rate per connection	$2,581.00	_____	_____

Remodels are not assessed a connection fee unless a new sewer connection is required. Place a check mark in the new or remodel category corresponding to the type of building permit for which you are applying.

Other Nonresidential Permits Fees are calculated as follows: (Including Hospitals; Lodges and Clubs; Rest, Residential Care and Convalescent Homes; Schools; Commercial and Industrial Permits).

Count the number of plumbing fixtures (by type) included on the project plans and enter the total of each fixture type in the space provided in the table below. Multiply the number entered for each fixture type by the fixture unit (FU) value provided to obtain a Fixture Unit Count. If the project involves demolition of previously occupied structures that included plumbing fixtures fill out the second half of the Table (credit for demolished fixtures). Subtotal the Fixture Units Counts for both new and demolished or removed fixtures. Subtract the Subtotal Credit Fixture Units from the Subtotal New Fixture Units to get the Fixture Unit Total for the project. Multiply the Fixture Unit Total by $127.00 to calculate the Sanitary Sewer Connection Charge for the project.

NEW FIXTURE COMPUTATION

Fixture Type	#	FU	FU Count

Connection Fee = Fixture Unit Total 10 **x $127.00 per FU = $** 1270 **TOTAL**

Name MG

Project Address 521 E. 5TH AVE.

Permit Number: 258827

FIXTURE UNIT DEFINITION

A fixture-unit is an intermittent flow-rate anticipated from plumbing-fixtures and is used to size downstream piping. For example: 1 fixture-unit is up to 7 1/2 gallons per minute; 2 fixture-units are up to 15 gallons per minute; and 4 fixture-units are up to 30 gallons per minute. Table 7-3 of the Uniform Plumbing Code assigns fixture-unit values to types of plumbing fixtures. A bathtub is 2 fixture-units, a water closet is 4 fixture-units, and a sink is 2 fixture units.

EXAMPLE

The tenant improvement (TI) of a retail space includes the removal of an existing unisex bathroom facility (including one sink, one public toilet and one floor drain), and the construction of separate men's (one urinal, two public toilets, and one floor drain) and women's (three public toilets, two sinks and one floor drain) bathroom facilities. The Sewer Connection Charge for this project is as follows.

NEW FIXTURE COMPUTATION

Fixture Type	#		FU	FU Count
Toilet(Water Closet) Private	___	X	2.5	_____
Toilet(water closet) Public	_5_	X	5	__25___
Urinal	_1_	X	4	__4____

Construction & Demolition Recycling & Waste Reduction Plan & Information

VERSION 1.0 REVISED 04/20/2016

Completed forms can be e-mailed to the Recycling Staff for approval

Check one: ☐ Demolition ☐ New Construction ☑ Alteration Addition/Remodel/Tenant Improvement)

Project Site Address: 521 E 5th Ave San Mateo	Permit #: BD 2016-258827
Project Contact: Tyrone Barber	Valuation: ~~$360,000~~ 130,000
Phone: 209 221 6623	Square Footage Altered: 3,967
E-mail: tybarberconstruction@yahoo.com	Square Footage Added:
Estimated Start Date: Jan 3 2017	

1. Briefly describe project: Remodel exterior of Building
2. What type of vehicle will be used to haul materials? (Circle all that apply) Debris box, trailer, dump truck, Pick-up truck)
3. List any deconstruction, salvage or on-site reuse of materials (i.e. – cabinets, windows, fixtures, on-site grinding):

Deposit Calculation – Select ONE Only		
Alteration, Addition or Tenant Improvement ($50,000+) (Deposit: $1,000 minimum, $10,000 maximum for residential, $30,000 maximum for commercial)	Valuation: $ ~~300,000~~ 130,000	X 3% 3,900
Demolition of Entire Building or Interior Office Space (Deposit: $1,000 minimum, $10,000 maximum for residential, $30,000 maximum for commercial)	Valuation: $	X 3%
New Construction of Entire Building (Deposit: $1,000 minimum, $10,000 maximum for residential, $30,000 maximum for commercial)	Valuation: $	X 3%

Common Materials in Additions/Remodels/Tenant Improvements

Type of Material	Quantity (Cu.Yds)	Quantity (Tons)	Debris Box or Self Haul and Recycling Facility Used
Mixed C&D		3	Green Waste Recovery
Concrete		1	Green Waste Recovery.
Dirt		N/A	
Salvage/Reuse		N/A	
Other			

- Weight tags must show Recycling from this C&D Project
- C&D = Construction & Demolition
- MSW & Refuse = Garbage

* For all projects, at least 25% of diverted material should come from waste that excludes soil, concrete, asphalt and other non-structural debris

Work Description:

T.I. "Infinity Dental Center" Convert (E) office space to (N) Dental Office. 4,152 SF.
Facade alterations, interior bearing and non-bearing walls and ceilings.
Revision 1 (Issued OTC 11/09/15): Resurface original roof, remove roof change from scope. Add (8) skylights in new openings and (2) equipment curbs.

PLEASE BE ADVISED THAT YOU ARE RESPONSIBLE FOR THE FOLLOWING:

For making all inspection request. A minimum of 24 hours advance notice is required for all inspection performed by the Building Divisior A minimum of 48 hours for all inspections performed by the Fire, Planning & Public Works Departments.
Please note this moy not guarantee you the next business day inspection. Inspections are on a first call basis and a given number of inspections are allocated for each day.

When requesting a Building Inspection through our automated system, you will be required to provide the IVR# to schedule.

The day of a scheduled inspection, you may call the Building Division after 8:30 a.m. to receive a 2 hour timeframe of the scheduled inspection.

Inspections are performed Monday thru Friday 8:30a.m. to 5p.m.

Maintain all construction documents (approved plans, permit card) in legible condition and ensure that they are at the job site for inspections.

Provide any and all equipment (ladders, lights, etc.) necessary to complete the inspection.

This permit becomes invalid if work is not commenced within 180 days after issuance, or if the work authorized on the site by such permit is suspended or abandoned for a period of 180-day after the time the work is commenced.

This permit does not include any construction within the Public Right of Way. Any construction in this area requires a separate permit from the Public Works Department.

Hours of Construction:

Monday-Friday:	7:00a.m. - 7:00p.m.
Saturday:	9:00a.m. - 5:00p.m.
Sunday	12:00p.m. - 4:00p.m.
Holiday	12:00p.m. - 4:00p.m.

#3 IDENTIFY WORKERS' COMPENSTATION COVERAGE AND LENDING AGENCY:

WARNING: FAILURE TO SECURE WORKERS' COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000), IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

WORKERS' COMPENSATION DECLARATION
I hereby affirm under penalty of perjury one of the following declarations:

( ) I have and will maintain a certificate of consent to self-insure for workers' compensation, issued by the Director of Industrial Relations as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. Policy No.: _____

( ) I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier: State Fund Policy No: 9065843 Expiration Date: 8-1-15

( ) I certify that, in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that, if I should become subject to the workers' compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

DECLARATION REGARDING CONSTRUCTION LENDING AGENCY
I hereby affirm under penalty of perjury that there is a construction lending agency for the performance of the work for which this permit is issued (Section 3097, Civil Code).

Lender's Name and Address: _____

#4 DECLARATION BY CONSTRUCTION PERMIT APPLICANT:

By my signature below, I certify to each of the following:

I am (X) a California licensed contractor or ( ) the property owner* or ( ) authorized to act on the property owner's behalf**.

I have read this construction permit application and the information I have provided is correct.
I agree to comply with all applicable city and county ordinances and state laws relating to building construction.
I authorize representatives of this city or county to enter the above-identified property for inspection purposes.
*requires separate verification form
**requires separate authorization form

CITY OF SAN MATEO

Revised 8/28/2014

Construction and Demolition (C&D) Projects - Recycling and Waste Reduction Plan

Circle one: Demolition | New Construction | Alteration (Addition/Remodel/Tenant Improvement)

Project Site Address: 521 E. 5TH. AVE.

Permit # 2504016

Project Contact: CHRIS CAMPOS

Valuation:

Phone: 925 - 822 - 5725

Square Footage Altered: 4152

E-mail: C.CAMPOS@CEDARCREEKBUILD.CO.COM

Square Footage Added: -0-

Estimated Start Date: 4/28/15

1. Briefly describe the project: REMODEL OF (E) COMMERCIAL BUILDING (INTERIOR & EXTERIOR)
2. What vehicle type will be used to haul materials? (Circle all that apply) Debris box, trailer, dump truck, pick-up truck)
3. List any ***deconstruction, salvage or on-site reuse*** of materials (i.e. - cabinets/windows/fixtures, on-site grinding):

Deposit Calculation - Select ONE Only

Alteration, Addition or Tenant Improvement ($50,000+): Valuation: $ _____ x 3% = $ 15,000

($1,000 minimum, $10,000 maximum for residential alteration, $30,000 maximum for commercial alteration/ tenant improvement)

(OR) Demolition of Entire Building or Interior Office Space: Valuation: $ _____ x 3% = $ _____

($1,000 minimum, $10,000 maximum for residential demolition, $30,000 maximum for commercial demolition)

(OR) New Construction of Entire Building: Valuation: $ _____ x 3% = $ _____

($1,000 minimum, $10,000 maximum for residential new construction, $30,000 maximum for commercial new construction)

Common Materials in Additions/Remodels/Tenant Improvements

Type of Material	Quantity (Cu. Yds)	Quantity (Tons)	Recycled (Tons)	Disposed (Tons)	Material Diversion Rate (%)	Disposal or Recycling Facility Used *(example: ABC debris box to XYZ recycling facility)*
Mixed C&D						Redwood City Tc Center
Concrete						
Dirt						
Salvage/Reuse						
Other						

Weight tags must show Recycling from this C&D Project

C&D = Construction & Demolition

MSW & Refuse = Garbage

**For all projects, at least 25% of diverted material shall come from waste that excludes soil, concrete, asphalt and other non-structural debris.*

SANITARY SEWER CONNECTION CHARGE

Commercial, Industrial, Church, and Golf Courses
(NON-RESIDENTIAL USES)

July 1,2014–June 30, 2015 FEE SCHEDULE AND WORKSHEET

The sewer connection fee is charged for construction of new buildings and the modification of existing buildings as noted below. The fee is collected prior to issuance of a building permit.

Churches and Golf Courses are charged a flat rate; other non-residential uses are charged based upon the fixture-units added by the project. A credit is allowed for each fixture-unit demolished by the project. An explanation of fixture-units and an example calculation is provided on the back of this worksheet.

Please use the chart below to calculate the connection fee for your project and bring the completed form to the building department. This fee calculation will become part of your building permit application.

			Remodel	New
Church/Golf Course	Flat rate per connection	$2,429.00	_____	_____

Remodels are not assessed a connection fee unless a new sewer connection is required. Place a check mark in the new or remodel category corresponding to the type of building permit for which you are applying.

Other Nonresidential Permits Fees are calculated as follows: (Including Hospitals; Lodges and Clubs; Rest, Residential Care and Convalescent Homes; Schools; Commercial and Industrial Permits).

Count the number of plumbing fixtures (by type) included on the project plans and enter the total of each fixture type in the space provided in the table below. Multiply the number entered for each fixture type by the fixture unit (FU) value provided to obtain a Fixture Unit Count. If the project involves demolition of previously occupied structures that included plumbing fixtures fill out the second half of the Table (credit for demolished fixtures). Subtotal the Fixture Units Counts for both new and demolished or removed fixtures. Subtract the Subtotal Credit Fixture Units from the Subtotal New Fixture Units to get the Fixture Unit Total for the project. Multiply the Fixture Unit Total by $120.00 to calculate the Sanitary Sewer Connection Charge for the project.

NEW FIXTURE COMPUTATION

Fixture Type	#		FU	FU Count
Toilet(Water Closet) Private	1	X	2.5	2.5

BJJF LLC
244 9TH STREET
San Francisco, CA 94103
4158853335

Work Description:
Modify (E) fire sprinkler system: Add 54 (N) heads and relocate 2 (E) heads.
TOTAL 3,979SF COMMERICAL T.I FOR SAFARI KID PRESCHOOL [BD2018-268851]
Revision 1: Updated calcs. ISSUED 5/23/19

PLEASE BE ADVISED THAT YOU ARE RESPONSIBLE FOR THE FOLLOWING:

For making all inspection request. A minimum of 24 hours advance notice is required for all inspection performed by the Building Division. A minimum of 48 hours for all inspections performed by the Fire, Planning & Public Works Departments.
Please note this may not guarantee you the next business day inspection. Inspections are on a first call basis and a given number of inspections are allocated for each day.

The day of a scheduled inspection, you may call the Building Division after 9:00 a.m. to receive a 2 hour timeframe of the scheduled inspection or go online to: https://www.cityofsanmateo.org/3321/Daily-Building-Inspections-Schedule

Inspections are performed Monday thru Friday 9:00a.m. to 5p.m.

Maintain all construction documents (approved plans, permit card) in legible condition and ensure that they are at the job site for inspections.

Provide any and all equipment (ladders, lights, etc.) necessary to complete the inspection.

This permit is valid for 12 months from the date of issuance. Extensions may be granted per AB2913.

This permit does not include any construction within the Public Right of Way. Any construction in this area requires a separate permit from the Public Works Department.

Hours of Construction:

Monday-Friday:	7:00a.m. - 7:00p.m.
Saturday:	9:00a.m. - 5:00p.m.
Sunday	12:00p.m. - 4:00p.m.
Holiday	12:00p.m. - 4:00p.m.

Related Actions and Sub Permits Associated to Main Permit

For Inspection Request:

Install an ADA toilet in restrooms
Install an ADA sink in restrooms
install an ADA grab-bar in restrooms
Install plumbing for all sinks and toilet fixtures
Install all plumbing trim and fixtures
Install all restroom accessories
Pour concrete on all trenches

ELECTRICAL

Install 15A-120V duplex outlets throughout
Install 20A-220V duplex
Install 120V dedicated circuit
Install 6" down light fixtures
Install 24"x 24" light fixtures
Install under cabinet light fixtures
Install exit sign lights
Install emergency lights

MECHANICAL

Install exhaust fan in restroom
Install supply and return duct in throughout the office space
Install supply and return diffuser
Balance entire system
Install digital thermostat

Initials: **Owner:** _____ **Contractor:** TB

EXTERIOR WORK

Install (5) exterior windows
Install drinking fountain in back of building
Install a 6' high playground fence
Install all metal gates with panic hardware (4)
Install new concrete patch
Install (1) new handicap parking
Install all signage
Pain all handicap stripping

PLUMBING

Saw cut and excavate for plumbing
Install drinking fountain
Install complete waste vent and cold/hot water system
Install water heater in mechanical room
Install sinks in restrooms. food prep area and all classroom
Install an ADA toilet in restrooms
Install an ADA sink in restrooms
Install an ADA grab-bar in restrooms
Install plumbing for all sinks and toilet fixtures
Install all plumbing trim and fixtures
Install all restroom accessories
Pour concrete on all trenches

ELECTRICAL

Install 15A-120V duplex outlets throughout
Install 20A-220V duplex
Install 120V dedicated circuit
Install 6" down light fixtures
Install 24"x 24" light fixtures
Install under cabinet light fixtures
Install exit sign lights
Install emergency lights

MECHANICAL

Install exhaust fan in restroom
Install supply and return duct in throughout the office space
Install supply and return diffuser
Balance entire system
Install digital thermostat

Initials: **Owner:** _____ **Contractor:** TB

FIRE SPRINKLER

Relocate and install new sprinkler heads

NOT INCLUDED IN BID

Power from outside
Low Voltage Wiring
Music system and communication unit
All permit fees
HVAC on roof top unit & VAV Boxes
Window Covering & film
Furniture & Cabinets
Playground equipment
Third party inspections
Fire Alarm System

INCLUDED IN BID

Architectural design, MEP engineering and Title 24
Job includes all labor and materials
Job will be performed according to plan specifications
All materials will be high quality commercial grade
Ground covering for the playground (per requirements)
Ceiling Insulation
Re-location of trash enclosure and opening of gate on the side passage (subject to city approval)
New Exit door at the back of the building

CONTRACT SUM:

We propose hereby to furnish material and labor – complete in accordance with these specifications for the sum of:

Two Hundred Ten Thousand 00/100….Dollars ($210, 000.00)

All material is guaranteed to be as specified. All work to be completed in a workmanlike manner according to standard practices. Any alteration or deviation from above specifications involving extra costs will be executed only upon written orders, and will become an extra charge over and above the estimate. All agreements contingent upon strikes, accidents or delays beyond our control. Owner to carry fire, tornado and other necessary insurance.

Initials: **Owner:** _____ **Contractor:** TB

ACCEPTANCE OF PROPOSAL:

The prices, specifications and conditions are satisfactory and are hereby accepted. You are authorized to do the work as specified. Payment will be made as outlined above. This proposal, when accepted, becomes a contract, and includes the General Terms & Conditions (attached). In addition, if this is a residential project, the Residential Contract Addendum is also incorporated and made a part of this contract.

Date: 10/4/16

Buyer's Signature

Construction & Demolition Recycling & Waste Reduction Plan & Information

REVISED 10/19/2017

Completed forms can be e-mailed to the Recycling Staff for approval

Check one: ☐ Demolition ☐ New Construction ☑ Alteration Addition/Remodel/Tenant Improvement)

Project Site Address: 521 E 5th AVE SAN MATEO	Permit #: BD 2018 - 26885
Project Contact: TYRONE BARBER	Valuation: 210,000
Phone: 209 221 6623	Square Footage Altered: 5979 sq-ft
E-mail: TYBARBERCONSTRUCTION@YAHOO.COM	Square Footage Added:
Estimated Start Date: 12/10/18	

1. Briefly describe project: TENANT IMPROVEMENT FOR PRE SCHOOL.
2. What type of vehicle will be used to haul materials? (Circle all that apply: Debris box, trailer, dump truck, Pick-up truck)
3. List any deconstruction, salvage or on-site reuse of materials (i.e. – cabinets, windows, fixtures, on-site grinding):

Deposit Calculation – Select ONE Only

Alteration, Addition or Tenant Improvement ($50,000+) (Deposit: $1,000 minimum, $10,000 maximum for residential, $30,000 maximum for commercial)	Valuation: $ 210,000	X 3% 6,300
Demolition of Entire Building or Interior Office Space (Deposit: $1,000 minimum, $10,000 maximum for residential, $30,000 maximum for commercial)	Valuation: $	X 3%
New Construction of Entire Building (Deposit: $1,000 minimum, $10,000 maximum for residential, $30,000 maximum for commercial)	Valuation: $	X 3%

Common Materials in Additions/Remodels/Tenant Improvements

Type of Material	Quantity (Cu.Yds)	Quantity (Tons)	Debris Box or Self Haul and Recycling Facility Used
Mixed C&D		1	RECOLOGY OF SAN MATEO County.
Concrete		2	
Dirt		0	
Salvage/Reuse		0	
Other		0	

- Weight tags must show Recycling from this C&D Project
- C&D = Construction & Demolition
- MSW & Refuse = Garbage

* For all projects, at least 25% of diverted material should come from waste that excludes soil, concrete, asphalt and other non-structural debris

Signature	City Approval
Signature of Applicant:	Approved By:
Print name: SHANU MATHUR	Date: 12/6/2018

REFUND REQUESTS MUST BE SUBMITTED WITHIN 60 DAYS FROM THE DATE OF THE FINAL INSPECTION OR THE DEPOSIT WILL BE FORFEITED

APPENDIX I

RESUMES OF ENVIRONMENTAL PROFESSIONALS

KIERSTEN HOEY

Senior Environmental Scientist

Kiersten Hoey is an environmental scientist with 17 years of experience in the environmental consulting industry. During this time, Ms. Hoey has served as a project manager and technical consultant for numerous site characterization investigations, remedial actions, and site assessments. Her experiences include: (1) conducting Phase I and Phase II site assessments and investigations; (2) planning, implementing, and managing sampling and analysis programs; (3) designing, evaluating, and implementing remedial alternatives; and (4) remedial action planning and reporting. Ms. Hoey has had extensive field experience with various drilling and sampling techniques, including cone penetrometer testing (CPT), hollow stem auger drilling, and direct push and HydroPunch™ drilling and sampling methods. She also has extensive field experience in well installation and development, soil excavation, and soil and groundwater sampling.

EDUCATION

B.S., Environmental Studies, The University of California at Santa Barbara, Santa Barbara, California

EXPERIENCE

2018 – Present:	PES Environmental, Inc., Novato, California
2007 – 2018:	GHD, Inc (Previously Conestoga-Rovers & Associates)
2004 – 2007:	Cambria Environmental Consultants
2002 – 2003:	Auckland Regional Council

HEALTH AND SAFETY TRAINING

Health and Safety training courses following EPA requirements
40-hour HAZWOPER training and annual 8-hour refresher courses

REPRESENTATIVE PROJECTS

Phase I Site Investigations, California – Have conducted numerous Phase I ESAs at commercial/industrial properties, retail shopping centers, office buildings, land located at the Port of Stockton, vineyards, auto-repair facilities, and manufacturing buildings; and 9,427 acres of forested land with barns, various waste and chemical storages, abandoned cars, debris, railcar bridges, and former homesteads and ranches. Tasks completed include historical property and surrounding site use research, site and offsite inspections, review of environmental reports and regulatory agency files, assessment of hazardous

materials/hazardous waste handling practices, interviews, and completing reports describing recognized environmental conditions, business environmental risks, and related potential environmental impairment issues.

UST Removal and Environmental Compliance, Berkeley, California – Project Manager for the removal of an abandoned underground storage tank (UST) and associated piping, and environmental compliance. Prepared UST Removal and Sampling Plan, coordinated with subcontractors and the City of Berkeley certified unified program agency (CUPA), managed the UST removal, excavation of contaminated soil for off-site disposal, and collection of compliance soil samples, and prepared subsequent UST Removal Report.

Environmental Compliance, Bay Area, California – Project Manager for environmental compliance soil and groundwater sampling during numerous retail service station demolitions and upgrades. Prepared Sampling Plans, collected compliance soil and groundwater samples, coordinated with subcontractors and local CUPAs, managed excavation of contaminated soil for off-site disposal, and prepared subsequent UST Removal Report

Site Investigation and Remediation, Bay Area and Sacramento, California – Project Manager for site investigations and remediation of petroleum hydrocarbon contamination at numerous existing and historical retail gasoline service stations throughout the San Francisco Bay Area and Sacramento. Managed environmental site investigations and preparation and implementation of various types of remedial approaches including separate phase hydrocarbon removal, air sparging, dual phase extraction, and soil excavation. Achieved environmental case closure for dozens of Leaking Underground Storage Tank (LUST) cases by characterizing hydrogeological site conditions, delineating the lateral and vertical extent of petroleum hydrocarbons, and remediation.

Site Investigation, Union City, California - Project manager of a chlorinated solvent site with contamination beneath a commercial laundry warehouse. Assessment activities included the collection of soil and groundwater samples to characterize hydrogeological site conditions and delineate the lateral and vertical extent of chlorinated solvents and the collection soil vapor and indoor ambient air samples to assess the potential vapor intrusion risk to the warehouse employees.

Site Investigations, Bay Area and Sacramento, California - Field scientist for site investigations of petroleum hydrocarbon contamination at numerous gasoline service stations throughout the San Francisco Bay Area and Sacramento. Project tasks included all logistical aspects of environmental assessments including field coordination, permitting, health and safety, oversight of drilling (hollow stem auger, mud rotary, direct push, cone penetration testing), well installations (conductor casing, monitoring and remediation wells, and vapor probes), soil, soil vapor, and groundwater sampling, and soil logging.

Land Management, Auckland, New Zealand – Auckland Regional Council Inspector for wastewater permits. Tasks included review of wastewater discharge permit applications and environmental impact reports, preparation of wastewater discharge permits, and compliance monitoring visits. Additional tasks included coordinating a habitat restoration program planting native trees and plants to reduce soil erosion along streams and conducting interactive educational sessions with the public to increase awareness of storm water pollution.

JULIE TURNROSS

Senior Hydrogeologist

Ms. Turnross has over 30 years of experience serving in technical and management capacities on a variety of projects in the areas of groundwater hydrogeology, environmental characterization, and soil/groundwater remediation. Her projects have included Phase I environmental site assessments, remedial investigations, feasibility studies, risk characterizations, and implementation of remedial alternatives at RCRA, CERCLA, and other facilities with soil, groundwater, surface water, and air contamination. Specialties include project strategy and scope of work development, integration of remedial strategies with property redevelopment, property transfer and redevelopment guidance, providing review services and settlement support to insurance carriers regarding environmental matters, project and multi-disciplinary team management, and EIR support.

Ms. Turnross has provided litigation support and peer review for a wide variety of cases, and has served as an expert witness. She has also worked extensively with regulatory agencies throughout California and the west coast.

EDUCATION

University of California, Berkeley: M.S., Engineering Geoscience, 1984
University of Arizona, Tucson: B.S., Geoscience, 1982

EXPERIENCE

2005 – present	PES Environmental, Inc., Novato, California
1995 – 2005	JTEC Environmental, Sebastopol, California
1991 - 1995	Treadwell & Rollo, San Francisco, California
1984 - 1991	Harding Lawson Associates, Novato, California
1982 - 1984	U.S. Geological Survey, Denver, Colorado & Berkeley, California
1983	Laurence Berkeley Laboratory, Berkeley, California
1981	ARCO Exploration Company, Lafayette, Louisiana

RECENT REPRESENTATIVE PROJECTS

Property Acquisition Study: Evaluated acquisition of property located between two Superfund sites. Activities included evaluation of adequacy of groundwater investigations in the property vicinity, Superfund remedy efficacy, potential residual contamination in soil as a result of declining water levels, and effect of land use controls on future site development.

Polychlorinated Biphenyls Source Evaluation: Evaluated known and potential historical PCB uses and tidal flow patterns to identify potential sources of PCBs in slough sediments at East Bay site. Investigations included review of historical investigations performed in the site vicinity, identification of existing and historical storm sewers and surface runoff pathways to evaluate potential stormwater runoff discharges to the slough in the vicinity of current and historical sites with PCB uses.

Naval Shipyard Proposed Redevelopment: Provided environmental, technical and regulatory consulting services to developer to support early transfer of former U.S. Navy shipyard in San Francisco being remediated under CERCLA program. Conducted technical reviews of U.S. Navy documents to evaluate remedial design selection and risk assessment, developed risk management plan strategy and remedial scope of work for early transfer process, and directed costing of remedial alternatives. Supported transfer documentation, including Finding of Suitability for Lease, Finding of Suitability to Transfer, Lease in Furtherance of Conveyance. Involved regulatory agencies included U.S. EPA, DTSC, RWQCB and Cal EPA. Acted as liaison with infrastructure development team regarding site environmental issues.

Third Party Review: On behalf of insurance company, provided review of environmental documents to evaluate performance of guaranteed fixed price remediation and verify compliance with environmental insurance policy restrictions and requirements. Remedial activities evaluated have included soil and sediment excavation, treatment, and disposal, in-situ stabilization, soil vapor extraction, enhanced bioremediation, and capping. Evaluated reasonableness and necessity of activities and costs. Sites include a former Naval Shipyard in Vallejo, California.

Brownfield Redevelopment: Provided environmental consulting services to support client's legal counsel, address special requests for information from project stakeholders, and present information at planning and technical meetings as part of ongoing redevelopment of developer-owned portion of former U.S. Navy shipyard in San Francisco. Provided review of and recommendations on environmental documents. Provided oversight for asbestos and dust monitoring activities, including negotiations with regulatory agencies and coordination with the public.

Phase I Environmental Site Assessments: Performed or managed over 500 Phase I Environmental Site Assessments using ASTM standards. Clients have included lending institutions, real estate developers, insurance companies, law firms, and property owners. Properties assessed have included manufacturing facilities, industrial sites, agricultural properties, office buildings, residential properties, and shopping centers. Specialized in properties with complex hazardous material uses and historical or current contamination issues. Provided recommendations to facilitate real estate transactions, including insurance acquisition.

Environmental Impact Report: Assisted in preparation of environmental and hazardous materials portions of Environmental Impact Report (EIR) for large commercial and residential redevelopment on CERCLA site. Because remediation was not complete at time of preparation of the EIR, demonstration of the efficacy of selected remedies was required.

Technical Advisor: Provided technical advice, review and support for multi-aquifer perchlorate investigation and remediation in Morgan Hill. Provided oversight of onsite and offsite ion-exchange treatment systems, bottled water supply program and offsite investigations. Technical issues at the site included evaluation of potential offsite sources of contamination, background contaminant levels and effects of imported water on groundwater flow and water quality.

Dry Cleaner Investigation: Provided litigation support for a case where a private well had been contaminated with dry cleaning solvents. Identified other potential sources of contamination, including municipal utilities, and reviewed results of investigations performed at the dry cleaning facility and other nearby sites.

CARL J. MICHELSEN, P.G., C.HG.

Principal Geochemist

Mr. Michelsen has over 30 years of experience as a project manager, geochemist, environmental scientist, and geologist for a variety projects, including site cleanup, landfills, water resources and water quality projects, environmental due diligence, litigation support, mining, and dredged sediment disposal. He specializes in the management and solution of complex soil and water quality problems, soil and groundwater investigation and remediation, and chemical fate and transport evaluation. In addition, Mr. Michelsen provides expert testimony and technical support to clients and legal counsel for environmental dispute resolution.

EDUCATION

- Postgraduate studies in Environmental Science and Engineering, University of California, Los Angeles, 1986-1988
- M.S., Geology, University of California, Los Angeles, 1986
- B.S., Geology, with distinction, Stanford University, California, 1982

SAFETY TRAINING

Health and Safety training courses following EPA and OSHA requirements. Courses included training in physical, chemical, and toxicological properties of hazardous materials; hazard evaluation and control; selection and use of personal protective equipment; sampling and monitoring techniques and equipment; site entrance and decontamination procedures; and safety plan development.

EXPERIENCE

1996 - Present:	PES Environmental, Inc., Novato, California
1988 - 1996:	Harding Lawson Associates, Novato, California
1986 - 1988:	Environmental Science and Engineering Department, University of California, Los Angeles
1984 - 1986:	Earth and Space Sciences Department, University of California, Los Angeles
1982 - 1984:	U.S. Geological Survey, Igneous and Geothermal Processes Division, Menlo Park, California

Summers 1982, 1984, 1985: Noranda Exploration, Inc., Reno, Nevada & Peregrine Mining Company, Vancouver, Canada

REGISTRATION

Geologist – California 1991
Certified Hydrogeologist – California 1999

REPRESENTATIVE PROJECTS

Site Investigation/Cleanup and Soils Management

Remedial Investigations (RI), Federal Superfund Site, Hunters Point Shipyard, San Francisco, California - Was assistant project manager and lead technical manager for RI. Managed multidisciplinary team investigating complex soil and groundwater contamination. Actively participated in agency negotiations, ARAR evaluation and presentation of investigation results in Public Forums. Prepared portions of RI/FS report for transfer of clean parcel. Developed fate and transport assessment for organic and inorganic soil and groundwater contaminants including metals, PAHs, SOCs, VOCs, pesticides, and petroleum hydrocarbons. Evaluated storm drain sediment contamination and proposed remedial alternatives to limit impacts to San Francisco Bay. Managed $3.5 million site inspections of 37 sites including storm drains, sanitary sewers, steamlines, fuel lines, storage yards, transformers, and industrial buildings. Conducted steamline and storm drain video surveys and inspections. Managed laboratory programs for analysis of groundwater and soil. Monitored progress and quality of work performed by Contract Laboratory Program (CLP) laboratories. Managed QA/QC data validation and analysis team evaluating contaminant fate and transport. Developed procedures for the use of statistical/graphical population partitioning techniques in establishing background levels of metals in soils; methodology is now recommended by DTSC for use in determining background concentrations in California soils. Developed facility-wide groundwater monitoring plan. Client: PRC Environmental Management and U.S. Navy, Engineering Field Activity West

Ecological Risk Assessment, Feasibility Study, Golden Gate Bridge, San Francisco and Marin Counties, California – Soils beneath the Golden Gate Bridge are contaminated with lead due to historical sandblasting of lead-based paints. Under DTSC, National Park Service and other agency oversight, managed the evaluation of ecological risks from exposure to lead in soil, development of cleanup goals and derivation of feasible engineering alternatives for addressing the lead problem. Client: Golden Gate Bridge and Highway Transportation District

Remedial Investigation (RI), Presidio of San Francisco, San Francisco, California - Provided comprehensive technical review and written and verbal critique of the Army's investigation and interpretation of background metals conditions at contaminated sites at the Presidio. Prepared focused review of lead migration issues in landfill materials adjacent to San Francisco Bay. Client: National Park Service and U.S. Environmental Protection Agency

Remedial Investigations U.S. Army Facilities, Fort Ord, and Fort Hunter Liggett, California and Pine Grove Flat, Nevada – For Fort Ord, developed basewide quality assurance project plan, background soil investigation plan and comprehensive facility-wide quality assurance project plan for the analysis of soils, groundwater, and surface water contaminated with metals, organics, and explosives. For the Fort Hunter Liggett Landfill,

developed statistically-based groundwater and surface water monitoring program and was quality control reviewer for quarterly monitoring reports. Was quality control reviewer for Chemical Data Acquisition Plan for mine shaft site containing buried solvent drums located in Pine Grove Flat, Nevada. Client: U.S. Army

Remedial Investigation/Feasibility Study/Remedial Action Plan, Former WWII-era Shipyard and Pipe Fabrication Facility, Napa, California – Managed the investigation, engineering evaluation, and remedial action plan for 150-acre former facility slated for mixed-use re-development. Prepared Remedial Design and Implementation Plan, managed quarterly monitoring, and assisted with preparation of environmental review documents. Client: Napa Redevelopment Partners

Lead Based Paint in Soil Reporting and Sampling, The Presidio, San Francisco, California – Compiled existing data, and collected new soils data to document that no further action needed for soils at historic Presidio buildings where lead-based paints were formerly used. Client: The Presidio Trust

Lead and Petroleum Hydrocarbon Contamination in Soil at Former Shipyard/Railyard, Richmond, California - Under the DTSC's Voluntary Cleanup Program, managed the preparation and implementation of a Remedial Action Workplan for the removal and offsite disposal of RCRA hazardous lead-bearing soil from a former railyard/shipyard support area and on-site placement of California-hazardous lead-bearing soils beneath buildings and parking lots. Reviewed third-party site investigation reports and adjacent property contamination cleanup reports. Developed residential cleanup goals using DTSC's Lead Spread health-risk modeling procedures; assisted with preparation of CEQA Initial Study documentation; and managed the public participation process. Obtained site closure from DTSC with no deed restrictions for ~80 percent of the property area. Client: Catellus

RCRA Unit Closure and Groundwater Evaluation, Ordnance Facility, Hollister, California – Under DTSC oversight, managed the investigation and closure of a RCRA unit wherein shallow soils were impacted by process chemicals. Managed closure of hazardous waste units and remediation of explosives contaminated soils. Conducted an evaluation of the occurrence of perchlorate and VOCs in groundwater under the oversight of the Central Coast RWQCB. Client: TDY Industries, Inc.

Remedial Action Plan Amendment, Pittsburg, California – Managed a RAP amendment proposed to remove and dispose of 60,000 cubic yards of asbestos fill materials. Client: Confidential

Corrective Action Plans for Site Redevelopment – under the oversight of the Alameda County Environmental Health Department, prepared and implemented corrective action plans for addressing volatile organic contamination in soil gas (e.g., passive vapor mitigation systems consisting of impermeable barriers and subsurface piping) at residential construction sites in Fremont, Oakland, and Livermore. Includes comprehensive indoor air, soil probe, and vent riser sampling to confirm conditions prior to occupancy

PCB Site, Redwood City – with the oversight of USEPA and the RWQCB, developed a Cap Modification Plan to incorporate redevelopment plans into modification of an existing cap over remnant PCBs in soil. Client: Confidential

Response Plan for Brownfield Redevelopment, Oakland, California – Under the oversight of DTSC, developed and implemented a Response Plan remedy for cleanup of a former auto dealership within the context of a redevelopment project. Client: Confidential

Remedial Investigation and Quarterly Groundwater Monitoring, Former Pulp Mill, Antioch, California – Managed the investigation of soil/groundwater contamination from former pulping operations and conducted quarterly groundwater monitoring. Obtained DTSC approval of monitored natural attenuation remedy for groundwater arsenic plume resulting from historical release of pulping chemicals. Client: Forestar Real Estate Group

Former Solvent Recycling Facility, Emeryville, California – Managed investigation of subsurface conditions and developed a RCRA Corrective Action Plan for a former solvent recycling site. Client: Confidential

TCE Contamination, Cupertino, California – Prepared and implemented plan for excavating TCE-contaminated soil and installation of passive venting system beneath existing building. Obtained RWQCB closure. Client: Mission West Properties

Former County Corporation Yard, Leaking Underground Storage Tank, Santa Rosa, California - Prepared an environmental site assessment to document and evaluate historical and surrounding site uses to establish the ownership and use of concrete underground storage tanks containing heavy petroleum product. Conducted geophysical investigations to locate buried tanks and site investigations to document soil and groundwater conditions. Removed a 32,000-gallon concrete tank containing heavy product and associated contaminated soil. Obtained site closure from the RWQCB. Assisted the property owner of obtaining reimbursement from the UST Cleanup Fund. Client: Sonoma County and a confidential property owner

Remedial Investigation/Feasibility Study/Remedial Action Plan, Huntington Park, California – Managed the compilation, evaluation and presentation of a 14-year long RI and interim remedial action program conducted by prior consultants at a former industrial site. Managed preparation of a RI/FS documenting VOC and hexavalent chromium contamination

(including post-remediation risk assessment) and Remedial Action Plan under the oversight of DTSC. Client: Sargent Industries

Perchlorate and VOC Contamination, B.F. Goodrich Superfund Site, Rialto, California – Under RWQCB oversight, managed investigation of soil contamination at fireworks distributorship facility. Provided assistance to legal team defending client from multiple lawsuits. Client: APE West

Phthalate and Metals Contamination, Los Gatos, California – At a former medical glove manufacturing facility, conducted remediation of soils contaminated with phthalate and metals prior to residential and commercial redevelopment. Obtained No Further Action letter from RWQCB. Client: Sobrato Development

Regional Plume Evaluation and Soil Gas Investigation/RCRA Closure, Redlands, California – Using available records and documents, compared the relative contribution of two facilities to the creation of an extensive (over 14 miles long) TCE and perchlorate plume in groundwater. Analysis showed how opposing facility's operations and disposal practices were responsible for creation of regional plume and that client's contribution was de minimis. Conducted soil gas investigation and risk assessment evaluation for client's site; showed that threats from low-level VOCs in soils were negligible to on-site workers and groundwater would not be impacted based on VLEACH modeling. Prepared Corrective Measures Study and assisted with public participation process in support of RCRA closure. Obtained DTSC approval of Corrective Measure. Client: Confidential

Remediation of Solvent Contaminated Soil, San Diego and San Gabriel Valley Superfund Sites located in El Monte and Pomona, California – At three industrial sites in southern California managed the operation of soil vapor extraction systems (SVE) to remediate solvent contaminated soils. At the San Diego site, cleanup was accomplished to the satisfaction of the DTSC in ~14 months; prepared Corrective Measures Completion Report for closure under RCRA. At the El Monte site, the facility is located within a regional plume whose investigation and cleanup is managed jointly by the RWQCB and the U.S. EPA. Managed quarterly groundwater monitoring program and installation and operation of an SVE system designed to cleanup the shallow soil. Assisted with preparation of CEQA Initial Study documentation. Provided technical arguments against EPA's methodology and allocation of responsibility for groundwater contamination. At the Pomona site, prepared a Remedial Action Plan under the oversight of the RWQCB, installed and operated an SVE system to successfully remediate soils. Client: TDY Industries, Inc.

Natural gas pipeline system, Sacramento and San Joaquin Valleys, California - Using a limited number of available site characterization reports, knowledge of current regulatory climate, and experience with petroleum hydrocarbon sites, developed generic site characterization and cleanup scenarios and estimated costs for over 60 gas condensate

processing facilities that have not been characterized or remediated. Client: Pacific Gas and Electric

Former pesticide mixing site and UST site closure, San Rafael, California - Served as project manager for obtaining final closure of a decades-old former DDT storage and mixing facility adjacent to San Rafael Creek. Evaluated the effectiveness of soil remediation in reducing DDT and petroleum hydrocarbon contamination in groundwater. Led efforts to obtain final site closure and coordinate remediation with adjacent contaminated sites. Client: Marin/Sonoma Mosquito and Vector Control District

Dredging Projects

Shoreline Sediments Impacted by Manufactured Gas Plant Wastes, San Francisco Bay Area, California – Provided technical assistance related to evaluation of planned dredged sediments contaminated with PAHs sourced from a nearby onshore former Manufactured Gas Plant. Client: Confidential

Proposed dredged sediment disposal at a former landfill, Galbraith Landfill/Golf Course, San Leandro, California - At a former landfill (now used as a golf course), evaluated the potential for leaching of metals and organic compounds from dredged sediments and the prospects for water quality impacts to surface water and groundwater. Using an existing monitoring well network, defined baseline conditions prior to the placement of dredged spoils including the occurrence of contamination from upgradient locations. Presented recommendations to reduce the threat of water quality impacts by sequencing the dredging and disposal operations to cover and cap the first dredged and most contaminated sediments with cleaner dredged sediment. Client: Port of Oakland

Design of dewatering facility and monitoring plan for proposed upland dredge sediment disposal at Skaggs Island, Sonoma County, California - Was lead technical manager for upland dredge sediment disposal project. Developed monitoring plan for surface, groundwater, and biological monitoring. Managed field and laboratory programs for sampling and chemical and physical analysis of dredged sediments and surface waters. Client: U.S. Navy, c/o Santina & Thompson, Inc.

Water quality impact evaluation for the disposal of dredged sediments, Sacramento/San Joaquin Delta, California - Conducted geochemical evaluation of potential impacts to surface and groundwater quality following upland disposal of dredged harbor sediments contaminated with heavy metals (cadmium, copper, zinc) and polynuclear aromatic hydrocarbons. Developed monitoring plan for surface water, groundwater, and biological and soils monitoring for upland disposal sites. Evaluated proposed Waste Discharge Requirements (WDRs) for upland disposal sites in terms of monitoring cost and attainability of effluent standards. Assessed the geochemical sediment quality of dredge sediments and evaluated the suitability of upland and aquatic disposal options in EIR/EIS. Managed field and laboratory

programs including sampling of surface water, groundwater, soils, and dredge sediments for wide variety of contaminants. Client: Port of Oakland, Port Planning Division

Landfill Sites

Landfill, Novato, California - Developed statistically based groundwater and surface water monitoring program following California Article 5 regulations. Evaluated regulatory and geochemical suitability of contaminated dredge sediment disposal for daily cover, levee reinforcement, and liner uses at a Class III landfill located adjacent to the Petaluma River. Conducted hydrogeological SWAT investigation evaluating leachate generation and potential migration at landfill. Investigation included collection and analysis of groundwater chemistry data to identify types, sources, and degree of mixing of leachate and groundwater. Client: Redwood Landfill

Landfill, City of Alameda, California - Prepared report describing results of groundwater monitoring mandated by Waste Discharge Requirements for closed landfill. Client: City of Alameda

Hydrogeologic Investigation of RCRA landfill facility, Martinez, California - Was technical manager for large hydrogeologic site characterization of a RCRA waste disposal facility. Managed field and laboratory programs for groundwater sampling. Evaluated geologic and chemical data for determining the sources and transport of fluids within a heterogeneous aquifer system. Client: Confidential

Oily soil repository, Richmond, California - Developed groundwater protection standards and statistical evaluation methods for groundwater monitoring program at oily soil repositories to comply with RWQCB Waste Discharge Requirements and Article 5. Developed statistical approach for evaluation of low-level detection of organic compounds in background and downgradient monitoring system, including intra-well statistical comparisons.
Client: Confidential

Environmental Due Diligence

Managed environmental due diligence Phase I and/or Phase II activities for over 50 sites including:

- San Mateo, Belmont and San Carlos, Novato Brownfields sites to be redeveloped for residential or office construction.
- Proposed Charter School sites in Richmond, Pittsburg, and Antioch.
- Hospital Complex, San Francisco, California
- Former 100+ year-old Ink Manufacturing facility, Berkeley, California.
- Silica sand quarry, Amador County. Evaluated potential environmental issues.

- 7-site portfolio of former naval base, industrial sites and open space sites located in California slated for redevelopment.
- 3-sites in Los Angeles, California slated for multi-residential redevelopment, including evaluation of potential methane intrusion issues.
- Former agricultural lands slated for residential development, San Jose, California
- 4,000+ acres of agricultural lands and 12-mile long railroad spur for proposed new city, El Rancho San Benito, California.
- 90-year old former explosives manufacturing plant located in Hercules, California. Conducted extensive regulatory agency file review and evaluation of historical information.
- Former Navy Engineering Field Activity West facility in San Bruno, California. Evaluated potential soil and groundwater contamination from former vehicle maintenance fueling operations and organochlorine pesticide applications. Under the oversight of DTSC, implemented successful removal of organochlorine and lead contaminated soils prior to site redevelopment.
- 44-acre 50 year old, former defense contractor manufacturing plant located in San Diego, California contaminated with VOCs, hexavalent chromium and PCBs. Conducted extensive agency file review, site inspection, and provided recommendations for reducing the potential for human health impacts following building demolition and reuse.
- Evaluated the potential for soil and groundwater contamination at a former chemical formulation and mixing plant located in Sunnyvale, California. Provided consultation to developer interested in redeveloping the site with an office park. Developed sampling plan to evaluate uninvestigated sewer lines and chemical mixing building footprint.
- In support of a property transaction, prepared likely and worst case estimates of the possible costs involved to further investigate and remediate a wood treatment facility located in Eugene, Oregon that contaminated groundwater with pentachlorophenol.
- 1930s era 65-acre apartment complex located in Los Angeles, California. Sampled soils for the presence of lead paint and pesticides and evaluated the significance of lead-paint and chlorinated pesticide contamination in soil. Derived soil cleanup goals using DTSC's Lead Spread Risk Assessment modeling procedures.
- In support of property transfers, prepared Phase I/II Environmental Site Assessments (ESA) of high-tech business parks located Mountain View, San Jose and Santa Clara, California within an area of complex regional groundwater contamination. Evaluated possible on-site sources of contamination and impacts of chlorinated solvent plumes on the subject property. Obtained RWQCB no further action letters.
- Managed preparation of Phase I/II ESA's of former cannery, shipyard prefabrication, and trucking company operations at two brownfields sites in Richmond, California surrounded by numerous industrial sites. Evaluated on-site soil and groundwater contamination and impacts from adjacent properties.
- Phase I/II ESAs for numerous shopping center real estate transactions. Evaluated impacts to soil/groundwater from on-site dry cleaners and possible impacts from offsite

petroleum hydrocarbon releases. Provided opinion in support of addressing environmental aspects of the business transactions including environmental indemnity agreements, environmental insurance, and cost recovery or future needed asbestos abatement. Obtained no further action letters from RWQCB and San Diego County Environmental Health Department.

- In support of a proposed sale of four manufacturing facilities in California and Colorado, prepared Phase I ESAs. Evaluated the potential for on and offsite releases of hazardous constituents to have affected the subject properties. Managed asbestos surveys and sampling.
- Conducted soil gas, soil pesticide residue, and groundwater surveys at former agricultural lands in Union City and San Jose, California adjacent to lands proposed for commercial re-development. Included in the studies was an evaluation of risk to worker populations from exposure to identified soil pesticide residues during and after construction.
- Evaluated the presence of pesticide residues at a former agricultural land located in Santa Rosa, California slated for school development. Evaluated pesticide, lead, PCBs and arsenic soil residues at three existing schools in Millbrae, California. Under the oversight of DTSC, prepared a Preliminary Endangerment Assessment and/or Removal Action Plans following AB387/SB162 requirements.

Litigation, EIR Review and other Dispute Cases

Omega Chemical Superfund Site, Santa Fe Springs, California – provided litigation support for VOC and hexavalent chromium site in Santa Fe Springs.

South El Monte Operable Unit Superfund Site – Provided expert opinion regarding sources and timing of VOC contamination at a Site and surrounding properties in support of mediated disputes of current and former operators. Provided expert opinion regarding the appropriateness of EPA's methodology for assigning cost recovery shares.

Oil Field Brine Groundwater Contamination Case, Belridge, Kern County, California – Provided litigation support for evaluating claims that groundwater quality was damaged by decades-long practice of disposing of oil-field brine wastes in unlined surface impoundments.

Surface Drinking Water Contamination Case, Redding, California – In support of legal claims against utility and forest product companies, conducted an evaluation of historical petroleum hydrocarbon data, tested surface waters for atrazine residues and provided expert opinions regarding contamination of ranch water supply.

Stormwater Runoff Contamination Case, Concord, California – Tested surface water runoff for metals and hydrocarbon contamination and provided expert opinions regarding contamination of residential lands by stormwater runoff.

Massachusetts Hill Mine, Grass Valley, California – Provided litigation support pertaining to surface water discharge from mine tunnels.

Harvard Gold Mine Groundwater Contamination Case, Jamestown, California – Provided litigation support for evaluating RWQCB claims that underground historic gold mining operations had caused arsenic and dissolved solids contamination of groundwater and surface water.

Proposed Gun Club, Brentwood California – Provided technical comments on EIR prepared for proposed gun club. Evaluated potential for soil, surface water and groundwater contamination by lead and other contaminants.

Evaluation of Technical Merits of Environmental Insurance Claim, Springfield, Oregon – For counsel representing insurance company in a dispute with claimant, analyzed the appropriateness of past site investigation and remediation work completed at a truck repair facility contaminated with VOCs and petroleum hydrocarbons. Reviewed environmental reports and invoices to determine if costs incurred (and claimed against environmental insurance policy) were reasonable.

Monitored Natural Attenuation, Carson, California – At the site of a former oil refinery (redeveloped as a shopping center), evaluated hydrogeologic, geochemical and remediation data to assess if monitoring and natural attenuation proposal by opposing party could replace active remediation by soil vapor extraction.

Lead Contamination at Gun Club, Cotati, California - For attorney representing property owner in dispute over property damage due to 40-year use of lead shot and bullets, reviewed third-party technical reports and provided opinions regarding adequacy of site investigation results.

Former Pesticide Mixing/Storage Site, San Rafael, California - In support of clients' claims against multiple insurance companies, provided technical support and expert opinion in mediation of dispute over policy coverage for past, current, and future investigation and cleanup costs. Developed multiple scenarios of the scale, time, and cost of soil, sediment, and groundwater cleanup depending on regulatory involvement, human health, and ecological risk and future land use.

Underground storage tank site, Concord, California - For a potentially responsible party (PRP), provided expert opinion in a dispute over ownership of soil and groundwater contamination. Evaluated geochemical "fingerprint" of source area petroleum hydrocarbons and presented arguments in support of client's position.

Chemical Manufacturing Site, Richmond, California - In support of a legal claim against a non-responsive PRP, conducted an onsite records review (under subpoena) documenting the storage, use, and disposal of solvents at a suspected source area. Reviewed invoices, product formulations, waste manifests, and permits for evidence of solvent usage at the site.

Underground storage tank site, San Jose, California - For attorney representing insurance companies in dispute with property owner over policy coverage, reviewed technical reports and provided opinion regarding sources, timing, and extent of soil and groundwater petroleum hydrocarbon contamination. Discriminated sources of petroleum hydrocarbons using geochemical "fingerprinting" techniques.

Other Projects

Arsenic in Groundwater Supply Wells and Water Supply Assessment, Sebastopol, California – Evaluated hydrogeological and geochemical constraints on the occurrence and mobility of arsenic in drinking water supply wells. Defined depth-discrete arsenic and flow rate conditions and designed revised well pump settings to avoid high arsenic zones and avoid expensive treatment. Prepared preliminary estimates for installation of arsenic treatment systems to meet the MCL. Prepared AB610 Water Supply Assessment for proposed development area. Client: City of Sebastopol

Groundwater Monitoring and Mitigation Program, San Jose, California - Managed the preparation of a plan to monitor and manage the potential impacts to groundwater quality from the application of recycled water on golf courses, public parks, and business parks. Concerns about the use of salt- and nitrate-rich treated wastewater for irrigation and possible leaching led regulators to require extensive groundwater monitoring to protect drinking water aquifers. Evaluated site-specific hydrogeology to establish the potential for recycled water use to lead to groundwater water-quality problems. Prepared statistically-based sampling and analysis programs. Developed feasible mitigation alternatives to limit groundwater impacts. Client: South Bay Water Recycling Project, San Jose

Drinking Water Supply Evaluation, Graton and Santa Rosa, California – Prepared engineering evaluation of water supply systems with elevated concentrations of iron and manganese or lead, above the MCL. Evaluated the characteristics of the water supply system, determined the necessary system improvements and costs and assisted with acquisition of State Office of Public School Construction critical hardship funding. Provided construction oversight of iron and manganese or lead removal systems. Client: Oak Grove Union School District

Investigation of arsenic in drinking water, rural elementary school, Santa Rosa, California - In response to the sudden occurrence of elevated levels of arsenic (above the MCL) in a drinking water well, evaluated geologic and geochemical data (pH, iron chemistry, and redox conditions) and developed a conceptual model for the arsenic occurrence. Evaluated six alternatives (e.g., water treatment, blending, and utility hook-up) for complying with the MCL. Designed and sited new well that has provided adequate supply at an arsenic concentration below the MCL. Prepared study of school district's compliance with the Safe Drinking Water Act requirements for testing and record keeping and provided training to District staff. Client: Piner-Olivet Union School District

Research and Prior Geologic Consulting Experience

UCLA Research Project, Rocky Mountain Arsenal Superfund Site, Denver, Colorado - Investigated the spatial variability of chlorinated organic solvent sorption. Was responsible for the design and implementation of field and laboratory experimental programs. Managed laboratory research team.

Environmental science and engineering program, University of California, Los Angeles, California - Served as a member of a research team investigating the transport properties of non-conventional (non-regulated) pollutants. Performed and interpreted laboratory experiments determining sorption characteristics of para-chlorobenzene sulfonic acid.

Earth and space sciences instruction, University of California, Los Angeles, California - Taught laboratory courses in oceanography, metamorphic petrology, and mineralogy. Conducted research in the fields of metamorphic petrology, ore deposits, and mineralogy.

USGS Research project, Crater Lake, Oregon - Assisted in research investigating the geological and geochemical evolution of Crater Lake.

Triumph Mine, Triumph, Idaho - Conducted a detailed site characterization of the geology of a lead/zinc/silver mine.

Gold mine reconnaissance, northeastern Nevada - Performed geochemical and geologic reconnaissance to locate potential new gold mines and prospects.
