Question 7

Great job and thank you for the thoughtful care going into the landscape project! One suggestion for future projects... can we consider incorporating fruit-bearing trees into some landscaping around the city? Perhaps parks could benefit from this as a source of shade + providing food to local residents in need. Thanks again! Wonderful job, Public Works!

Question 7

I cannot believe the poor choices in plantings that are options here. You should be focusing on CA natives, and there are plenty of evergreen options that would provide the necessary habitat for wildlife, atmospheric cooling, are water wise, and air purifying. An EASTERN redbud?!? Why not use the native western variety?!? Why is there only ONE swale? Why are trees that drop debris and have potential to be diseased and ruin sidewalks even an option? Redwoods next to a sidewalk?!? Has this planner even seen a redwood? Whomever suggested invasive ivy with TOXIC fruits should be fired. Where are the native shrubs? Alternative blooming lawns? If resident taxes are paying for this, I will be VERY upset if this is where my money goes. This entire plan needs to be readdressed, please!!!

Question 7

For ECR, it would make more sense to have evergreen trees lining the street, unless you have the plan and the budget for frequently removing fallen leaves. However, the only choice of an evergreen tree in this survey is one that I think is far too brawny to line a boulevard.

Also, anything that requires even moderate watering should be out of consideration. We have a growing population and a diminishing annual water supply, and neither of those trends is likely to change.

- Fruitless Olive

Question 6

- Proposal A

Question 7

- Redwoods are not doing well here and I understand the City's Managing Arborist is no longer planting them. They should not anchor the landscaping for the City owned portion of the sound wall.
- People tend to vote for colorful flowers, but although native flowering plants look great when in bloom, they tend to look like a mess as they die back. Also, do you really want colorful beds of low growing flowers causing drivers to turn their heads to get a look and admire? Far better to use green ground covers and variously textured shrubs, and then incorporate color via flowering trees and trees with bright fall foliage that offer up their charms more at drivers' eye levels.

I would say to try to use the most effective landscaping for drought and low maintenance.

Question 4

- Coast Live Oak

Question 5

- Cercis canadensis Eastern Redbud

Question 6

- Proposal B

Question 7

Instead of using only Eastern Redbud, our native Western Redbud (*Cercis occidentalis*) should also be integrated into the design of trees in the cloverleaf plantings. Do not use Mexican Feather Grass. There are good native grasses, such as *Mulenbergia rigens* (Deer Grass) and *Calamagrostis foliosa* (i.e. Mendocino Leafy Reed grass) as accents in the larger planting area. Another beautiful drought tolerant and disease resistant tree for accent and habitat value in the clover leaf areas is Coast Silk Tassel (*Garry elliptica*).

Prioritize plantings for native pollinators, birds, reptiles. There need to be enough evergreen trees suitable for nesting sites and NO pesticide use on the plantings. Suitable mulch that is replenished each Fall will suppress weeds; leave some areas near boulders unmulched for native bee nesting.

We need native trees/ plants/ flowers to sustain our native and migratory wildlife more than ever. Thank you for your thoughtful options.

Question 7

why consider redwood trees for the Hayward wall. Redwood trees are not well suited for an urban environment within the context of climate warming. There simply is not enough moisture for them to survive in an urban environment this is especially true if planted close to a heat radiating infrastructure such as the Cal Train Tracks. Change to another deciduous tree which can better handle the extreme heat and dryness the Cal Train Tracks create.

Question 7

Personally, I'd prefer to see ALL California native plants. Start with keystone species like Valley Oak, then shrubs like Arctostaphylos, Ceanothus, Heteromeles, and do on. Nonnative plants are ecological dead ends for providing food for native insects. Also, check the list against

invasive plants. I mean, IVY? Really? We can do so much better than this. Truly a disappointing plant list.
