1.0 INTRODUCTION

West Environmental Services & Technology, Inc. (WEST) has prepared this *Phase I Environmental Site Assessment* ("*Phase I ESA*") for the Caltrain Hayward Park commuter rail station, 401 Concar Drive in San Mateo, California ("the Site;" Figure 1-1). This *Phase I ESA*, prepared for Marina Community Partners ("User"), was conducted in accordance with: 1) the United States Environmental Protection Agency's (USEPA's) Chapter 40 Code of Federal (CFR) Regulations Part 312, S*tandards and Practices for All Appropriate Inquiry: Final Rule* (40 CFR 312); and 2) ASTM *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process E 1527-13* (ASTM E 1527).

1.1 PURPOSE

The objective of performing the *Phase I ESA* was to identify recognized environmental conditions (RECs) at the Site related to the previous ownership and uses of the Site and adjoining properties and to assist User in qualifying as a 'bona fide prospective purchaser" for the purpose of liability limitations in the Comprehensive Environmental Response, Compensation and Liability Act of 1980, as amended ("CERCLA") and as a "bona fide purchaser".

As used in this Phase I ESA, the following definitions apply:

- Pursuant to Section 3.2.78 of ASTM E 1527, RECs, as applied in the scope of this work, are the presence or likely presence of any hazardous substance or petroleum products in, on or at the Site: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment;

- Pursuant to Section 3.2.18 of ASTM E 1527, a controlled REC is a REC resulting from a past release that has been addressed to the satisfaction of the applicable regulatory authority, e.g., issuance of no further action letter or equivalent, or meeting risk-based

criteria, with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls including property use restrictions, activity and use limitations or engineering controls.

- Pursuant to Section 3.2.22 of ASTM E 1527, *de minimis* conditions, i.e., conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies, are not considered RECs. Pursuant to Section 3.2.78 of ASTM E 1527, *de minimis* conditions are not RECs.

- Pursuant to Section 3.2.42 of ASTM E 1527, an historical REC is a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls, i.e., property use restrictions. Prior to concluding that a past release is an historical REC, the environmental professional must determine whether the past release is a REC at the time of the *Phase I ESA*, e.g., if there has been a change in regulatory criteria. If the past release is determined to be a REC at the time of the *Phase I ESA*, then the condition shall be deemed a REC.

In classifying findings per Section 12.5 of the ASTM Standard and reflected in the Findings column of Table 7-1 as Known RECs, Suspect RECs, Controlled RECs, Historical RECs or *De Minimis* conditions, the following principles have been applied.

i. Where there is a known or likely release of a hazardous substance or petroleum product and the volume and/or concentration associated with the release are known to be, or are assessed as likely to be, in excess of applicable regulatory standards for unrestricted use, the condition is classified as a Known REC in the Findings column, and the finding is explained in the Opinions column. In addition, a Known REC is identified as a REC in the Conclusions column.

ii. Under appropriate circumstances described above, and as explained in the Opinions column, a Known REC may be identified as a Controlled REC in the Findings and is identified as a REC in the Conclusions column. If a REC has been remediated to the satisfaction of the regulators and closed without imposition of institutional or engineering controls or express reliance on area-wide institutional or engineering controls, it is identified as a Historical REC, which is usually not considered a REC, unless the condition, in the opinion of the environmental professional, represents a current REC. In such cases, the condition is identified as a REC in the Conclusions column.

iii. Where there is a known release of a hazardous substance or petroleum product but the volume and/or concentration associated with the release are known or assessed to be below regulatory standards for unrestricted use, the condition is considered De Minimis and therefore is not identified as a REC in the Findings, Opinions and Conclusions. Where there is not a known release and there is insufficient information to determine whether a release of a hazardous substance or petroleum product is likely to have occurred, the condition is not classified as a Known REC in the Findings, but it may be considered a Suspect REC in the Findings, and a Significant Data Gap is noted. Similarly, where there is a known or likely release but there is insufficient information to determine whether or not the condition is *De Minimis*, the condition is not classified as a Known REC, but it may be considered a Suspect REC, and a Significant Data Gap is noted.

Depending on the context, the application of these principles to specific conditions and concerns may be expressed in various ways in the "Findings, Opinions, Rationale and Conclusions" columns in Table 7-1, but the principles have been applied uniformly throughout this Phase 1 ESA.

1.2 DETAILED SCOPE-OF-SERVICES

The work followed the guidelines as outlined in 40 CFR 312 and ASTM E 1527, except as otherwise noted. Specifically, WEST performed the following activities:

- WEST obtained and reviewed reasonably ascertainable background data on the characteristics and previous uses of the Site. The work included reviewing selected historical aerial photographs, topographic maps and reasonably ascertainable data on the geology and hydrogeology of the Site and vicinity;

- WEST conducted a Site reconnaissance of accessible exterior portions of the grounds and performed a drive-by reconnaissance of the surrounding neighborhood;

- WEST requested interviews with the Site owner representatives and requested information from local regulatory agency representatives regarding the previous and current uses of the Site;

- WEST searched pertinent regulatory records concerning potential releases of hazardous materials at the Site and surrounding properties that may have impacted soil and/or groundwater quality;

- The findings were evaluated to develop opinions regarding whether they represented recognized environmental conditions; and

- WEST performed a data gap analysis.

The scope of the *Phase I ESA* did not include evaluations for possible natural hazards such as naturally occurring radon gas, methane gas or the potential for earthquake or flood damage.

1.3 LIMITATIONS AND EXCEPTIONS

The observations and conclusions presented in this report are professional opinions based on the activities conducted and the information obtained during the environmental assessment described herein. Any conclusions drawn from this data rely on the integrity of the information available at the time of the investigation and a definitive determination of environmental risks cannot be made.

1.4 SPECIAL TERMS AND CONDITIONS

No special terms and conditions were indicated by the User for this *Phase I ESA*.

1.5 USER RELIANCE

The *Phase I ESA* report is for the exclusive use of the User and its designees. Use of this report by any other party shall be at such party's sole risk.

1.6 EXECUTIVE SUMMARY

The approximately 2.81-acre triangular flat-lying Site is located at 401 Concar Drive in San Mateo, California and is currently operated as the Peninsular Corridor Joint Powers Board (JPB) Hayward Park Caltrain commuter rail station (Figure 2-1). The Site is bounded by: the JPB railroad right-of way and commercial/industrial businesses to the east; residential apartments and undeveloped lands to the north; the Station Park Green multi-family residential development to the west; and Concar Drive, commercial businesses and California Highway 92 to the south. The proposed future uses of the Site are for at-grade parking and above-grade multi-family residential apartments units, landscaping and hardscapes.

1.6.1 Background

Prior to the 1900s, the Site and surrounding area were marshlands associated with the San Francisco Bay (EDR, 2020). Between at least the 1900s and 1950s, the site was filled and the former Leslie Salt Company, C.E. Whitney Chemical Company and L.C. Smith Company Asphalt Plant were historically located on and adjacent to the Site. A former rail spur was also present on the Site that was used by the former Site occupants. In the 1960s, the Site was developed as a train station. In 2018, the JPB approved development of the Hayward Park Caltrain Station into a mixed commercial-residential.

1.6.2 Previous Investigations and Remediation

Investigations have been conducted on the Site and the surrounding properties (WEST, 2020). Between 2014 and 2016, investigations and remediation were conducted at the adjacent Station Park Green development. Laboratory analysis of soil and groundwater samples collected during pre-development sampling at the Station Park Green Project border with the Site revealed total petroleum hydrocarbons (TPH), including: diesel (TPHd) up to 4,100 milligrams per kilogram (mg/kg) in soil and 120,000 micrograms per liter (µg/l) in groundwater; and TPH as gasoline (TPHg) up to 340 mg/kg in soil and 19,000 µg/l in groundwater (Versar, 2014). On January 20, 2016 SMCEH notified the JPB with a concern that contamination removed from soil at the Station Park Green Project boundary with the Site "appeared to extend or originate from the Caltrain parking lot" and that L.C. Smith operated an asphalt plant predominantly on the Site until the 1970s (SMCEH, 2016). In 2016, approximately 22,700 tons of soil containing TPH were removed from the Station Park Green property. In September 2016, the San Mateo County Environmental Health (SMCEH) closed the remedial actions at 1700 S. Delaware Street (SMCEH, 2016).

In May 2016, WEST advanced 24 borings at the Site (WEST, 2020). The sampling data from the May 2016 investigation revealed the presence of TPHd in: soil up to 14,700 mg/kg; and

groundwater up to 11,700 µg/l (W-12). The investigation also revealed: the presence of lead in soil up to 2,610 mg/kg; and pesticides and semi-volatile organic compounds in soil.

On April 18, 2018, the SMCEH opened an environmental oversight case for the Site naming JPB as a potential responsible party to the releases at 1700 S. Delaware Street and to oversee investigations and remedial actions at the Site to address the presence of diesel and motor oil. In December 2019 and January 2020, additional investigations were conducted at the Site to further characterize the presence of: TPH, VOCs and semi-volatile organic compounds (SVOCs) in soil; VOCs in soil gas; and TPH and VOCs in groundwater (ERM, 2020). Laboratory analysis of the soil samples collected between 0.5-feet and 20-feet below ground surface revealed: TPHg up to 45 mg/kg; TPHd up to 8,200 mg/kg; and TPHmo up to 11,000 mg/kg (ERM, 2020). Laboratory analysis of the groundwater samples revealed: TPHg up to 94 µg/l; TPHd up to 8,600 µg/l (SB-12); and TPHmo up to 5,300 µg/l (ERM, 2020). ERM concluded in their report that the groundwater results indicate that "the TPH from the [S]ite is not the source of TPH in groundwater detected in the Station Park Green [downgradient]." ERM further concluded that the TPH at 1700 S. Delaware Avenue "was most likely remediated" during the soil removal activities at 1700 S. Delaware Street in 2016 (ERM, 2020).

1.6.3 Off-Site and Upgradient Releases

Underground storage tank releases to groundwater have been documented at off-Site and upgradient properties located at 1740, 1741 and 1753 Leslie Street (SMCEH, 2020; EDR, 2020). The UST releases were remediated and closed by the SMCEH between 1994 and 2015. However, residual TPH and VOCs remained in soil and groundwater at these off-site properties. Groundwater samples collected from the Site in 2016 indicated that the off-site UST releases to groundwater might have migrated onto the Site.

Other historical off-Site and upgradient operations with respect to the Site included a former bulk fuel storage and machine shop (1731 Leslie Street) and household appliance warehousing and repair operation (1701 Leslie Street). However, information regarding soil and groundwater

conditions and historical releases at these off-Site properties were not reasonably ascertainable (EDR, 2020). A machine repair and sheet metal operation was located at 161-167 17th Avenue. At 161-167 17th Street, one gasoline UST was removed in 1992; however, no releases were documented from the UST. The SMCEH closed the UST at 161-167 17th Street in May 1992 (SMCEH, 2020).

1.6.4 Data Gaps

Consistent with 40 CFR 312 and ASTM E 1527, an analysis of significant data gaps of historical records was conducted. Based on the analysis, no significant data gaps were identified.

1.6.5 Conclusions

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527. Any exceptions to, or deletions from, this practice are described in Section 8 of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the Site; except for those identified in Table 7-1.

2.0 SITE DESCRIPTION

The approximately 2.81-acre Site is located at 401 Concar Drive in San Mateo, California with assessors parcel number 035200998. The Site is relatively flat at approximately 8-feet above mean sea level (MSL) with a gently slope toward San Francisco Bay to the east. The Site is currently used for the Hayward Park Caltrain station with associated parking areas. The future development is contemplated for a mixed commercial-residential property with potential subterranean parking. The Site is bounded by: the JPB railroad right-of way and commercial/industrial businesses to the east; residential apartments and undeveloped lands to the north; the Station Park Green multi-family residential development to the west; and Concar Drive, commercial businesses and California Highway 92 to the south.

2.1 GEOLOGIC AND HYDROGEOLOGIC SETTING

The Site is located in the Santa Clara Valley Groundwater Basin - San Mateo subbasin, which occupies a structural trough, sub-parallel to the northwest trending Coast Ranges, at the southwest end of San Francisco Bay. San Francisco Bay constitutes its eastern boundary. The Santa Cruz Mountains form the western margin of the San Mateo basin. The basin is composed of alluvial fan deposits formed by tributaries to San Francisco Bay, that drain the basin (DWR, 2004). Alluvium was encountered at the property immediately west if the Site to approximately 60-feet below ground surface (GeoCon, 2016).

The water bearing formations of the San Mateo subbasin are comprised of the Santa Clara Formation of Plio-Pleistocene age and the Quaternary age alluvial deposits. The Quaternary alluvium constitutes the most important water bearing formation and is composed of gravel, sand, silt and clay with various grain size distributions dependent on the depositional environment. Maximum thickness attained by the Quaternary alluvium is approximately 1,250 feet (DWR, 2004). The geology, encountered in borings advanced at the Site to approximately 15-feet below ground surface, was unconsolidated clay, silty clay, gravelly clay, silts, sandy clay/silts, clayey sand and sand.

The groundwater flow direction near the Site ranged between south to southeast with a gradient of approximately 0.02 feet per foot. Groundwater samples collected near the Site revealed total dissolved solids (TDS) up to 33,000 mg/l (Cambria, 2006). Groundwater concentrations exceeding 3,000 mg/l are not considered suitable or potentially suitable for municipal or domestic supply pursuant to the 2017 California Regional Water Quality Control Board - San Francisco Bay Region, *San Francisco Bay (Region 2) Water Quality Control Plan* (*Basin Plan).*

2.2 SURFACE WATER

A partially lined unnamed storm drain channel is located approximately 200-feet to the north of the Site and flows to the San Francisco Bay. The San Francisco Bay is located approximately 1.5-miles to the northeast of the Site.

2.3 CURRENT USES OF ADJOINING PROPERTIES

Current uses of the adjoining properties at the Site include: residential developments; railroad right-of-way; and commercial developments.

3.0 USER PROVIDED INFORMATION

WEST submitted a questionnaire to the User to assist in identifying the known recognized environmental conditions in connection with the Site. A copy of the User Questionnaire is included in Appendix A.

3.1 TITLE RECORDS

The User has not provided a preliminary title report for review at the time of this *Phase I ESA.*

3.2 ENVIRONMENTAL LIENS OR ACTIVITY AND USE LIMITATIONS

The User indicated there are no environmental liens or activity use limitations recorded against the Site. An Environmental Lien Search Report was requested from Environmental Data Resources, Inc. (EDR) of Milford, Connecticut (EDR, 2020). The Lien Search Report did not identify environmental liens or activity use limitations recorded against the Site. Copies of the User questionnaire and the EDR Lien Search Report are included in Appendix A. (Appendix A).

3.3 SPECIALIZED KNOWLEDGE

The User indicated no specialized knowledge or experience related to the Site.

3.4 VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

The User indicated that the purchase price for the Site reasonably reflects the fair market value for the Site without deduction for contamination.

3.5 COMMONLY KNOWN OR REASONABLY ASCERTAINABLE SITE INFORMATION

The User indicated no awareness of the past uses of the Site or knowledge of past and present chemicals present, chemical spills or environmental cleanups.

3.6 DEGREE OF OBVIOUSNESS

The User indicated no knowledge or experience related to the Site regarding obvious indicators that pointed to the presence or likely presence of releases at the Site.

4.0 RECORDS REVIEW

WEST conducted a records review to identify recognized environmental conditions at and near the Site. The records searched for this *Phase I ESA* consisted of standard federal and state environmental record sources as defined in ASTM E 1527. Historical records searched as part of the *Phase I ESA* included: aerial photographs; topographic maps; and city directories. Relevant historical uses associated with the Site and surrounding areas are depicted on Figure 2-1 and discussed in Table 7-1.

4.1 STANDARD ENVIRONMENTAL RECORD SOURCES

WEST commissioned an environmental database report prepared by EDR on June 16, 2020. The environmental database report consisted of a review of federal and state regulatory listings for sites within the search radii established under the ASTM E 1527 (EDR, 2020). Sites listed in the EDR environmental database report located: greater than 1,000-feet distance from the Site; at topographically lower elevations; and/or hydraulically downgradient or cross-gradient from the Site, were reviewed but not considered relevant to the identification of recognized environmental conditions. Discussions of the relevant findings from the environmental database report, e.g., sites within approximately 1,000-feet and hydraulically upgradient of the Site have been included, as appropriate, in Table 7-1. A copy of the EDR environmental database report is included in Appendix A.

4.2 ADDITIONAL ENVIRONMENTAL RECORDS SOURCES

Additional environmental records including previous environmental reports, electronic databases, permits and correspondence were reviewed from: SMCEH; Regional Water Board and the California Department of Toxic Substances Control (DTSC. Discussions of the relevant findings from the additional environmental record sources have been included in Table 7-1. Copies of the relevant documents have been included in Appendix B.

4.3 PHYSICAL SETTING SOURCES

The 1947, 1949, 1956, 1968, 1973, 1980, 1993, 1997 and 2012 San Mateo United States Geological Service (USGS) 7.5 Minute Quadrangle topographic maps were reviewed to identify geologic, hydrogeologic, hydrologic and topographic features of the Site and surrounding area. Copies of the USGS topographic maps are included in Appendix A.

4.4 HISTORICAL USE INFORMATION ON THE SITE

The objective for reviewing historical sources regarding past uses of the Site was to develop information regarding history of previous uses of the Site and surrounding area to identify the likelihood of past uses having led to recognized environmental conditions in connection with the Site. Reasonably ascertainable historical sources including aerial photographs and city directories were reviewed. Locations of relevant historical uses of the Site are identified on Figure 2-1. Copies of the standard and other historical sources are included in Appendix C and D.

4.5 HISTORICAL USE INFORMATION ON ADJOINING PROPERTIES

The information sources used for evaluating the historical use of the Site were reviewed to identify historical uses of adjoining properties. Locations of relevant historical uses of adjoining properties are identified on Figure 2-1.

5.0 SITE RECONNAISSANCE

A Site reconnaissance was performed by Mr. Peter Morris, P.G. of WEST, on November 11, 2020. The objective of the reconnaissance was to obtain information indicating the likelihood of recognized environmental conditions in connection with the Site. The reconnaissance included a visual observation of the Site and adjoining properties. A summary of the relevant conditions observed during the Site reconnaissance is included in Table 7-1. Photographic documentation obtained during the Site reconnaissance is included in Appendix E.

5.1 METHODOLOGY AND LIMITING CONDITIONS

As part of the reconnaissance, accessible portions of the Site were observed visually. Accessible physical conditions included: pathways, access roads and walkways located on the perimeter of the Site as well. Adjoining properties were also visually observed, where possible.

5.2 GENERAL SITE SETTING

Observations were made during the Site reconnaissance to identify whether the current uses of the Site and adjoining properties are likely to involve the use, treatment, storage, disposal or generation of hazardous substances or petroleum products. A summary of the relevant findings from the Site reconnaissance is included in Table 7-1.

6.0 INTERVIEWS

The objective of the interviews was to obtain information indicating recognized environmental conditions in connection with the Site.

6.1 INTERVIEW WITH OWNER

A representative for current Site owner, Mr. Brian Fitzpatrick of JPB, was identified by the User as knowledgeable. Mr. Fitzpatrick also appeared to meet the qualifications of ASTM E-1527 for a Key Site Manager. However, at the time of this Phase I ESA, the interview questionnaire had not been completed.

6.2 INTERVIEW WITH PROPERTY MANAGER

Property Manager representatives, other than Mr. Fitzpatrick, were not identified; therefore, Property Manager representatives were not interviewed.

6.3 INTERVIEW WITH OCCUPANTS

The Site was unoccupied, thus interviews with Site occupant representatives were not conducted.

6.4 INTERVIEWS WITH LOCAL GOVERNMENT OFFICIALS

Files were reviewed from the following regulatory agencies: State Water Resources Control Board's electronic Geotracker environmental database; Department of Toxic Substances Control (DTSC) electronic Envirostor environmental database; and the SMCEH. Discussions of the relevant findings from the local government agencies have been included in Table 7-1.

6.5 INTERVIEWS WITH OTHERS

Other knowledgeable individuals regarding the Site uses and conditions were not identified; therefore, were not interviewed.

7.0 FINDINGS, OPINIONS AND CONCLUSIONS

WEST has performed a *Phase I ESA* of the Site in conformance with the scope and limitations of ASTM E 1527. Any exceptions to, or deletions from, this practice are described in Section 8.0 of this report. This assessment has revealed no evidence of RECs in connection with the Site; except for those identified in Table 7-1. A summary of the findings, opinions and conclusions is presented in Table 7-1.

7.1 FINDINGS

In accordance with Section 12.5 of ASTM E 1527, a summary of the history, relevant information obtained during the Phase I ESA, potential chemicals present, the known or suspect recognized environmental condition, as well as controlled RECs, historical recognized environmental conditions and *de minimis* conditions have been identified and provided in Table 7-1.

7.2 OPINIONS

In accordance with Section 12.6 of ASTM E 1527, the opinions including WEST's rationale for concluding that the known or suspect RECs identified in the findings section are or are not currently RECs are presented in Table 7-1.

7.3 DATA GAPS

Consistent with 40 CFR 312 Section 312.20(g) and ASTM E 1527 Section 12.7, a data gap analysis was performed. Based on the analysis, no significant data gaps were identified. Sources of information consulted in performing this evaluation are identified in Table 7-1, Section 12.0 References and documents in Appendices.

7.4 CONCLUSIONS

In accordance with Section 12.8 of ASTM E 1527, the conclusions, based on WEST's opinions and rationale regarding recognized environmental conditions, are presented in Table 7-1.

8.0 DEVIATIONS

There were no deviations from the ASTM Practice E 1527 standard while conducting this *Phase I ESA* except for the following:

- Historical aerial photographs were not reviewed in five-year increments; and
- Site tax files and lien reports were not reasonably ascertainable.

Due to other information available regarding the Site, such deviations did not affect the findings and opinions presented in this Phase I ESA.

9.0 ADDITIONAL INVESTIGATIONS

Consistent with 40 CFR 312 Section 312.31 and ASTM E 1527 Section 12.6.1, an evaluation was conducted to identify whether additional investigations are needed to obtain greater certainty with regard to Site conditions. Based on the evaluations, no additional investigations are needed to obtain greater certainty with regard to the Site conditions.

10.0 ADDITIONAL SERVICES

No additional services were contracted or performed as part of this *Phase I ESA*.

11.0 QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

This report has been prepared under the direction of Peter M. Krasnoff, P.E., a registered Civil Engineer with over 30 years of environmental assessment and evaluation experience. Mr. Krasnoff received his Master of Science from the University of California at Berkeley in Environmental Engineering and his Bachelor of Civil Engineering from the Georgia Institute of Technology. Mr. Krasnoff has extensive experience in environmental investigations and remediation and has conducted reviews of over 100 sites involving hazardous materials and waste disposal activities. Mr. Krasnoff was supported by Mr. Peter Morris, P.G., a Professional Geologist.

Mr. Morris, a Professional Geologist with over 25 years of environmental assessment and investigating experience, also prepared this *Phase I ESA*. Mr. Morris received his Bachelors of Science degree from the University of California at Davis in Geology and his Masters of Science degree in Civil and Environmental Engineering from George Washington University. Mr. Morris has conducted and supervised numerous site investigations involving the evaluation of hazardous materials and wastes with emphasis on soil and groundwater characterization and remediation.

SUMMARY OF RECOGNIZED ENVIRONMENTAL CONDITIONS
Caltrain Hayward Park Station
401 Concar Drive, San Mateo, California

Map ID (Figure 2-1)	Location		FINDINGS (ASTM 1527-13; Section 12.5)														OPINIONS (ASTM 1527-13; Section 12.6)		DATA GAPS (12.7)	CON-CLUSIONS (Sec. 12.8)
			History	Known or suspect environmental conditions	Chemicals						Reg. Closure	Known REC	Suspect REC	Controlled REC	Historical REC	*De Minimis*	Rationale	Add'l Invest. Rec. (Sec. 12.6.1) (Y/N)	Significant Data Gap	Recognized Environmental Conditions
					TPH	VOCs	SVOCs	Pesticides	Metals	PCBs										
1	Former Leslie Salt/C.E. Whitney Chemical Company, L.C. Smith Asphalt Company Operations	Site	Prior to 1900s, the Site was undeveloped marshlands adjacent to the San Francisco Bay. After 1900, the Site was filled in (EDR, 2020). Between the 1900s and the 1940s, the Leslie Salt Refining Company and the C.E. Whitney Chemical Company operated salt production facilities on the Site and evaporation ponds adjacent to the Site. The 1908 Sanborn Fire Insurance map indicated that features of the Leslie Salt Refining Company operations included: salt storage warehouse; aboveground brine storage tanks; and below ground oil storage tanks (Appendix D). The 1920 Sanborn Fire Insurance map indicated that additions to the Leslie Salt Refining Company included: boiler house;salt dissolving tanks; lime storage shed; and a tractor house. In addition, the C.E. Whitney Chemical Company operations were present on the 1920 Sanborn Fire Insurance map (EDR, 2020). Features of the C.E. Whitney Chemical Company included: boilers; and underground oil storage tanks (USTs). The C.E. Whitney Chemical Company manufactured "epsom salts, magnesium chloride and potassium chloride from sea water" in conjunction with the Leslie Salt Refining Company (C&M, 1916). The potassium and magnesium salts were obtained from the remaining liquor following evaporation. The 1943 historical aerial photograph also indicates smaller evaporation ponds near the area of the Whitney Chemical production facilities (EDR, 2020). Between the 1950s and 1960s, the L.C. Smith Asphalt Company conducting asphalt mixing operations on the adjacent property to the east and south with an asphalt plant formerly located on a portion of the Site. Features of the operations included: hot asphalt mixing plant; oil tanks; boiler house; tool and welding sheds; equipment repair facilities; storage yards; and a scale house (EDR, 2020). Chemicals potentially used, stored and disposed as part of the asphalt mixing operations could have included: fuel oils and asphaltic cement; and solvents for vehicle and equipment maintenance. Since the 1960s, the Site has been used as the Hayward Park Caltrain commuter rail station owned and operated by the Peninsular Corridor Joint Powers Board (JPB) In 2000, investigations conducted on adjacent property located at 470 Concar Drive and near the former C.E. Whitney Chemical Company operations revealed dissolved metals in groundwater including: arsenic up to 73 micrograms per liter (ug/l); barium up to 890 ug/l; cadmium up to 13 ug/l; cobalt up to 830 ug/l; molybdenum up to 25 ug/l; nickel up to 620 ug/l; selenium up to 17 ug/l; vanadium up to 13 ug/l; and zinc up to 350 ug/l (Environ, 2008). Total petroleum hydrocarbons as gasoline (TPHg), diesel (TPHd) and motor oil (TPHmo) were also detected up to 590 ug/l; 1,400 ug/l and 1,800 ug/l, respectively. The groundwater flow direction is inferred to the east toward the San Francisco Bay (Geocon, 2016). In May 2016, soil, soil gas and groundwater samples were collected in the upper 10-feet (borings W-2 to W-24) to characterize potential releases from the fill materials and historical operations by the former Leslie Salt, C.E. Whitney and L.C. Smith Asphalt Plant operations. Laboratory analysis of the soil samples revealed TPHd up to 14,700 milligrams per kilogram (mg/kg) and TPHmo up to 11,600 mg/kg, above their respective Tier 1 California Regional Water Quality Control Board (Regional Water Board) Environmental Screening Levels (ESLs) of 260 mg/kg and 1,600 mg/kg. Lead was detected in soil up to 2,640 mg/kg, above its Tier 1 Regional Water Board ESL of 32 mg/kg and its residential ESL of 80 mg/kg. Other chemicals including volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), pesticides and arsenic were not detected above laboratory-reporting limits, background concentration and/or applicable screening levels (Appendix B). Stained soil was also observed in the borings advanced in May 2016. VOCs were also detected in the soil gas samples collected in May 2016 including PCE up to 10.3 micrograms per cubic meter (ug/m3) below its Regional Water Board Tier 1 ESL of 15 ug/m3. Benzene was detected in soil gas up to 9.81 ug/m3, above its Tier 1 Regional Water Board ESL of 3.2 ug/m3.	Potential releases of hazardous substances and petroleum products to soil from historical Site operations.	X	X	X		X			X					Based on the presence of naphthalene, TPHd, TPHmo and lead in soil above applicable screening criteria, the release of hazardous substances and petroleum products in soil from historical filling and Site operations represents a recognized environmental condition (REC).	N		X
				Potential releases of hazardous substances and petroleum products to soil gas from historical filling and Site operations.		X						X					Benzene is present in soil gas above applicable screening criteria, and therefore, represents a REC. However, due to the proposed Site development grading plans and building construction features, (waterproofing barriers, ventilated garages, above-grade occupied spaces), it is unlikely that residual VOCs in soil gas will represent a vapor intrusion condition following Site development.	N		X

			History	Known or suspect environmental conditions	Chemicals						Reg. Closure	Known REC	Suspect REC	Controlled REC	Historical REC	*De Minimis*	Rationale	Add'l Invest. Rec. (Sec. 12.6.1) (Y/N)	Significant Data Gap	Recognized Environmental Conditions
					TPH	VOCs	SVOCs	Pesticides	Metals	PCBs										
1	Former Leslie Salt/C.E. Whitney Chemical Company, L.C. Smith Asphalt Company Operations	Site (cont'd)	In July 2019, a work plan was submitted to SMCDEH further characterize the extent of TPH in soil and groundwater on the Site (ERM, 2019). Between February and November 2019, the SMCDEH issued notices of violations to JPNB for not implementing ERM's 2019 work plan. Between December 2019 and January 2020, 12 borings (SB-01 to SB-12) were advanced at the Site for collection of soil and groundwater samples. Laboratory analysis of the soil samples collected between 0.5-feet and 20-feet below ground surface revealed: the presence of TPHd up to 8,300 mg/kg; TPHmo up to 11,000 mg/kg above their respective Tier 1 ESLs of 260 mg/kg and 1,600 mg/kg. Naphthalene was detected in soil up to 1,500 ug/kg, above its Tier 1 ESL of 42 ug/kg. Laboratory analysis of the groundwater samples collected by ERM revealed: TPHg up to 94 ug/l (SB-12); TPHd up to 8,600 ug/l (SB-12) above its Tier 1 ESL of 100 ug/l.; and TPHmo up to 5,300 ug/l (ERM, 2020). ERM concluded in their report that the groundwater results indicate that “the TPH from the site is not the source of TPH in groundwater detected in the Station Park Green [downgradient] boring B-12.” ERM further concluded that the TPH at 1700 S. Delaware Avenue “was most likely remediated” during the soil removal activities at 1700 S. Delaware Street in 2016 (ERM, 2020). Information regarding SMCEH approval of ERM's 2019-2020 soil and groundwater investigation findings was not reasonably ascertainable. At the neighboring site (1700 Delaware) the regulators agreed that due to high dissolved solids, the groundwater was not potable water source, but the TPHd is above applicable discharge standards should groundwater be removed during site development and/or future use.	Potential releases of VOCs, petroleum products and metals to groundwater from historical filling and Site operations.	X	X						X					The presence of VOCs, petroleum products and metals in groundwater at levels above applicable screening criteria and the naming of the Site owner as a potentially responsible party and the requirements for management of groundwater during future use of the Site represents a REC.	N		X

2	1700 S. Delaware Street	Adjacent to Site	The adjacent property (formerly known as 1700 S. Delaware Street) to the northeast was formerly occupied by the Leslie Salt Company and L.C. Smith Asphalt Company between the 1900s and 1950s. In the 1960s, 1700 S. Delaware Street was developed as a shopping center with a Montgomery Wards Automobile Service Center, a Kmart retail store and a Shell branded gasoline service station (1790 S. Delaware Street)(EDR, 2020). Investigations conducted by Versar, Inc. in 2014 as part of the Station Park Green development detected TPHg (up to 19,000 ug/l) and TPHd (up to 120,000 ug/l) in a groundwater boring (B-12) advanced near the Site boundary (Versar, 2014). In January 2016, the San Mateo County Environmental Health (SMCEH) notified the Peninsular Corridor Joint Powers Board (JPB) that the Site appears to have contributed to the impacts observed at 1700 S. Delaware Street (SMCEH, 2016a). In May 2016, groundwater samples collected at the Site revealed TPHg and TPHd up to 181 ug/l and 11,700 ug/l, respectively, above their Regional Water Board Tier 1 ESLs of 100 ug/l and 100 ug/l. VOCs including 1,2-dichloroethane (up to 5,750 ug/l) and benzene (up to 4.62 ug/l), were detected in groundwater above their Tier 1 Regional Water Board ESLs of 0.42 ug/l and 0.5 ug/l, respectively (Appendix B). Based on the downgradient location of 1700 S. Delaware Street relative to the Site, groundwater samples were collected on-Site from borings W-21 and W-22 which were advanced in May 2016 near the Site boundary and upgradient of boring B-12 to characterize whether on-Site releases had migrated off-Site. Laboratory analysis of the groundwater samples revealed TPHg up to 256 ug/l and TPHd up to 811 ug/l, which were at lower concentrations than detected in the groundwater sample collected from boring B-12 on the 1700 S. Delaware Street property, indicating likely contributions from the operations at 1700 S. Delaware Street. In 2016, remedial actions with oversight from the the SMCEH at 1700 S. Delaware Street included removal of approximately 22,700 tons of soil. In September 2016, the SMCEH closed the remedial actions at 1700 S. Delaware Street (SMCEH, 2016). In April 2018, the SMCEH identified the JPB as a potential responsibly party to the releases at 1700 S. Delaware Street (SMCEH, 2018). In July 2018, the JPB subsequently entered into an oversight agreement with the SMCEH to “determine the extent, stability, and impact of the contamination, whether it poses a significant risk to human health and the environment; and if so, to implement actions to remediate and mitigate these risks and protect the beneficial uses of groundwater.” (SMCEH, 2018). Between December 2019 and January 2020, 12 borings (SB-01 to SB-12) were advanced at the Site for collection of soil and groundwater samples. Laboratory analysis of the groundwater samples revealed: TPHg up to 94 ug/l (SB-12); TPHd up to 8,600 ug/l (SB-12); and TPHmo up to 5,300 ug/l (ERM, 2020). ERM concluded in their report that the groundwater results indicate that “the TPH from the site is not the source of TPH in groundwater detected in the Station Park Green [downgradient] boring B-12.” ERM further concluded that the TPH at 1700 S. Delaware Avenue “was most likely remediated” during the soil removal activities at 1700 S. Delaware Street in 2016 (ERM, 2020). Information regarding SMCEH approval of ERM's 2019-2020 soil and groundwater investigation findings was not reasonably ascertainable.	Potential releases of petroleum products and related VOCs at 1700 S. Delaware Street to have migrated beneath the Site.	X	X					X					The releases of petroleum products to groundwater a 1700 S. Delaware Street that have contributed to detections on the Site represent an REC for the Site.	N		X

3	Former Rail Spur and existing Railroad Right-of-Way	Site	A rail spur was formerly located along the northeast Site boundary from at least the 1900s to the 1960s. The The rail spur was connected to the Southern Pacific Railroad (currently Union Pacific Railroad) main line located to the southwest and used by the Leslie Salt Refining Company, C.E. Whitney Chemical Company and the L.C. Smith Asphalt Company for transporting bulk materials and refined products (EDR, 2020). Hazardous substances and petroleum products may have been used for rail spur maintenance and weed control. In addition, hazardous substances and petroleum products may have been spilled or leaked during transfer of bulk materials to the industrial operations. The rail spur was removed in the 1960s for development of the Caltrain Hayward Park train depot. In May 2016, soil samples were collected from borings (W-2, W-4, W-8, W-10, W-21 and W-22) advanced near the former rail spur and borings W-23 and W-24 near the existing UPRR right-of-way. Laboratory analysis of the soil samples collected near the former rail spur revealed TPHd up to 875 mg/kg, above it Regional Water Board Tier 1 EAL of 260 mg/kg. TPHmo was detected in soil up to 487 mg/kg, below its Regional Water Board Tier 1 ESL of 1,600 mg/kg. Arsenic was detected in soil up to 5.03 mg/kg, within the background arsenic range up to 11 mg/kg for the San Francisco Bay Area. Lead was detected in soil up to 35.7 mg/kg, which is above its Regional Water Board Tier 1 ESL of 32 mg/kg. Soil samples collected near the current UPRR right-of-way contained TPHd up to 214 mg/kg, below its Tier 1 Regional Water Board ESL of 260 mg/kg. The pesticide 4,4-DDD was detected in the soil samples collected along the former rail spur alignment up to 8.18 micrograms per kilogram (ug/kg), which is below its Tier 1 Regional Water Board ESL of 2,700 ug/kg (WEST, 2020)..	Potential presence for releases of hazardous substances and petroleum products to soil from rail spur use and maintenance	X			X	X				X				Based on the presence of TPHd in soil above its applicable screening criterion, the potential releases to soil from rail spur maintenance and use represents a REC.	N		X

					TPH	VOCs	SVOCs	Pesticides	Metals	PCBs										
4	Vail Burner & Oil Company-1741 Leslie Street	Less than 1/8-mile to the east	Vail Burner & Oil company operated a bulk oil storage and distribution facility at 1741 Leslie Street, located approximately 300-feet southwest of the Site, between 1940s and 1989 (GGT, 2006b). Features at 1741 Leslie Street included: two 20,000-gallon aboveground storage tanks (ASTs) for kerosene and diesel fuel; one 10,000-gallon AST for motor oil; one 420-gallon gasoline underground storage tank (UST); and two 350-gallon heating oil USTs. In 1989, following removal of the ASTs, preliminary assessment investigations were conducted at 1741 Leslie Street. The investigations indicated releases of petroleum hydrocarbons to soil and groundwater. Between 1992 and 1998, the three USTs were removed and additional investigations conducted to delineate the extent of petroleum hydrocarbons in soil and groundwater. Six monitoring well were installed in 1998 and 1999 and sampled periodically up until 2006. Laboratory analysis of the groundwater samples collected from the monitoring wells revealed: TPHg up to 8.900 ug/l; TPHd up to 260,000 ug/l; TPHmo up to 27,000 ug/l; benzene up to 21 ug/l; MTBE up to 3 ug/l; and TBA up to 65 ug/l (GGT, 2006). In 2003, additional monitoring wells were installed upgradient and downgradient of 1741 Leslie Street. Laboratory analysis of groundwater samples collected between 2003 and 2006 of the downgradient monitoring well MW-8 and upgradient of the Site revealed: TPHg up to 50 ug/l; TPHd up to 2,100 ug/l; benzene up to 0.8 ug/l; xylenes up to 1.4 ug/l; and MTBE up to 1.1 ug/l (GGT, 2006). In October 2009, SMCEH requested submittal of the Feasibility Study/Corrective Action Plan which was due in 2006. In November 2009, approximately 212 cubic yards of soil were excavated from the area near the former ASTs between 8-feet and 14-feet below ground surface (TEC, 2013). The excavated soil was transported off-Site for disposal. Post-excavation soil samples collected from the sidewalls and base of the excavation revealed: TPHg up to 510 mg/kg; TPHd up to 18,000 mg/kg; TPHmo up to 3,240 mg/kg; and naphthalene up to 21 mg/kg, above their cleanup goals of 500 mg/kg, 500 mg/kg, 500 mg/kg and 1.2 mg/kg, respectively. Groundwater samples collected from the monitoring wells at 1741 Leslie Street in 2013 revealed: TPHg up to 53 ug/l; TPHd up to 300 ug/l; and methyl tertiary butyl ether up to 3.5 ug/l (Geotracker, 2020). Chlorinated VOCs including trichloroethene (TCE; up to 1 ug/l) and 1,1-dichloroethene (1,1-DCE) up to 53 ug/l were detected in the downgradient monitoring well MW-9 in 2013. TEC concluded that the soil and groundwater conditions at 1741 Leslie Street met the State Water Resources Control Board's Low-Threat UST Closure Policy criteria based on: 1) since the post-excavation soil results were four years old, concentrations of TPH have “likely” decreased due to natural attenuation; and 2) groundwater sampling conducted in 2013 indicated that residual TPH mass does not represent a continuing secondary source of dissolved-phase contamination (TEC, 2013). In March 2014, the SMCEH indicated that the releases at 1741 Leslie Street did not meet the LTCP criteria based on the lack of representative soil gas data and the need to further delineate the extent of naphthalene in soil. The SMCEH did concur that groundwater “no longer appears to be a significant issue” (SMCEH, 2014). Between July and August 2014, soil and soil gas samples were collected at 1741 Leslie Street. In addition, the existing groundwater monitoring wells were sampled in July 2014. Laboratory analysis of the soil samples did not reveal naphthalene above the laboratory-reporting limits. Laboratory analysis of the soil gs samples revealed benzene up to 15.1 ug/m3; ethyl benzene up to 2.45 ug/m3; naphthalene up to 6.08 ug/m3, below their respective LTCP residential criteria. Groundwater samples collected from the monitoring wells in July 2014 revealed TPHg up to 99 ug/l; TPHd up to 3,300 ug/l; and MTBE up to 3.3 ug/l. In September 2015, with concurrence from the Regional Water Board, the SMCEH close the releases at 1741 Leslie Street; however residual impacts to soil and groundwater remain (SMCEH, 2015). The Site is located hydraulically downgradient from 1741 Leslie Street. In May 2016, two groundwater samples (W-23 and W-24) collected from the upgradient site boundary and downgradient of 1741 Leslie Street contained TPHd up to 570 ug/l (WEST, 2020). VOCs were not detected in the groundwater samples collected from borings W-23 and W-24 above the laboratory-reporting limits (WEST, 2020).	Potential for releases of TPH and petroleum-related VOCs in groundwater at 1741 Leslie Street to migrate beneath the Site	X	X					X						While the releases to groundwater at 1741 Leslie Street were closed by the SMCDEH in 2015, based on the downgradient location of the Site with respect to to 1741 Leslie Street, and the on-Site detections of TPHd in groundwater along the gradient Site boundary, the potential for the releases at 7141 Leslie Street to migrate beneath the Site represents a REC to the Site.	N		X
				Potential for chlorinated VOCs detected in groundwater downgradient of 1741 Leslie Street and upgradient of the Site to migrate beneath the Site.		X							X				While the SMCDEH closed the releases at 1741 Leslie Street, the presence of CVOCs in groundwater were not addressed by SMCDEH. However, based on the lack of CVOCs detected in on-Site groundwater samples along the upgradient Site boundary, the potential for CVOCs in groundwater to migrate beneath the Site does not represent a REC to the Site.	N

			History	Known or suspect environmental conditions	Chemicals						Reg. Closure	Known REC	Suspect REC	Controlled REC	Historical REC	*De Minimis*	Rationale	Add'l Invest. Rec. (Sec. 12.6.1) (Y/N)	Significant Data Gap	Recognized Environmental Conditions
					TPH	VOCs	SVOCs	Pesticides	Metals	PCBs										
5	1753 Leslie Street	Less than 1/8-mile to the east	Between at least the 1950s, automobile repair operations have been conducted at 1753 Leslie Street (EDR, 2020). 1753 Leslie Street is located hydraulically upgradient of the Site. Hazardous materials stored and used have included but not limited to: compressed gases; motor oil; caustics; and solvents. Hazardous wastes have included spent solvents, waste antifreeze and waste oil stored in drums. In 1992, a permit was issued for removal of an approximately 550-gallon UST. The UST was present beneath a service bay and reportedly present for 25 years but was not used by the automobile repair operations (SMCEH, 2020). In January 1993, the UST was removed and soil over-excavated. Observations of the excavation indicated that the UST had leaked (SCI, 1993). Post-excavation soil samples revealed total volatile hydrocarbons up to 1,600 mg/kg that weresubsequently further over-excavated. In March 1993, one groundwater monitoring well was installed. Laboratory analysis of the a groundwater sample collected from the monitoring well revealed: TVH as gasoline at 180 ug/l; benzene at 2.1 ug/l and ethyl benzene at 3.7 ug/l. Between June 1993 and March 1994, additional groundwater samples were collected fro the monitoring well. Laboratory analysis of the groundwater sample collected in March 1994 did not reveal TVH as gasoline, benzene, toluene ethyl benzene or xylenes above the laboratory-reporting limits (SCI, 1994). The groundwater samples collected of CVOCs from the one monitoring well were not analyzed for TPHd. In December 1994, the SMCEH granted case closure for the leaking UST (SMCEH, 1994). In July 2003, as part of the investigations being conducted at 1741 Leslie Street (located adjacent to the north of 1753 Leslie Street), a monitoring well MW-9 was installed downgradient of 1753 Leslie Street and the releases at 7141 Leslie Street. Laboratory analysis for chlorinated VOCs of the groundwater samples collected from well MW-9 in 2013 and 2104 revealed: TCE up to 4.4 ug/l; 1,1-DCE up to 110 ug/l; cis-1,2-DCE up to 5.8 ug/l; 1,1,1-TCA up to 45 ug/l; and 1,1-DCA up to 7.1 ug/l (TEC, 2014). TPHd was also detected up to 1,800 ug/l. In May 2016, two groundwater samples (W-23 and W-24) were collected on the upgradient Site boundary and downgradient of 1753 Leslie Street. Laboratory analysis of the two groundwater samples revealed: TPHd up to 570 ug/l and 1,2-DCA up to 2.89 ug/l (WEST, 2020).	Potential for releases of TPH and CVOCs to groundwater at 1753 Leslie Street to migrate beneath the Site.	X	X					X						While the releases to groundwater at 1753 Leslie Street could have commingled with the known releases at 1741 Leslie Street, based on the presence of TPHd and CVOCs in on-Site groundwater downgradient of 1753 Leslie Street, the potential for releases at 1753 Leslie Street to migrate beneath the Site represents a REC to the Site.			X

			History	Known or suspect environmental conditions	Chemicals						Reg. Closure	Known REC	Suspect REC	Controlled REC	Historical REC	*De Minimis*	Rationale	Add'l Invest. Rec. (Sec. 12.6.1) (Y/N)	Significant Data Gap	Recognized Environmental Conditions
					TPH	VOCs	SVOCs	Pesticides	Metals	PCBs										
6	1740 Leslie Street	Less than 1/8-mile to the east	Between at least the 1950s and 1970s, United Parcel Service (UPS) conducted delivery truck distribution and service operations at 1740 Leslie Street (SMCEH, 1999). 1740 Leslie Street is located hydraulically upgradient of the Site. As part of the UPS operations, two gasoline USTs (2,000-gallon and 7,500-gallon) and one waste oil UST (2,000-gallon) were used for vehicle fueling and vehicle service waste storage (HA, 1997). The USTs were located on the west side of 1740 Leslie Street adjacent to Leslie Street. In November 1992, the three USTs were removed and observations during the UST removals indicated a releases associated with the 2,000-gallon waste oil UST. A water sample collected from the waste oil UST excavation contained TPHg at 54,000 ug/l, benzene at 1,700 ug/l, toluene at 3,000 ug/l, ethyl benzene at 1,800 ug/l and xylenes at 5,700 ug/l. In 1998 and 1999, groundwater samples collected near and beneath the former UST excavation contained: TPHg up to 40,000 ug/l, benzene up to 1,900 ug/l; ethyl benzene up to1,000 ug/l, MTBE up to 220 ug/l; TPH as kerosene up to 180,000 ug/l and TPH as Stoddard Solvent up to 35,000 ug/l (SMCEH, 1999). In April 1999, based on the groundwater sample collected beneath the former USTs, the UST excavation backfill was removed and further soil removed. 4,000 gallons of water were removed during the over-excavation Laboratory-analysis of the water revealed TPH and VOCs including: TPHg at 7,600 ug/l; TPHd at 32,000 ug/l; and benzene at 110 ug/l. Following over-excavation and subsequent backfilling, a groundwater sample collected near the excavation and it contained TPHd at 330 ug/l and MTBE at 12 ug/l. In July 1999, the SMCEH granted case closure of the releases at 1740 Leslie Street (SMCEH, 1999). In May 2016, two groundwater samples (W-23 and W-24) were collected on the upgradient Site boundary and downgradient of 1753 Leslie Street. Laboratory analysis of the two groundwater samples revealed: TPHd up to 570 ug/l and 1,2-DCA up to 2.89 ug/l (WEST, 2020).	Potential for releases of TPH and VOCs to groundwater at 1740 Leslie Street to migrate beneath the Site.	X	X					X						While the releases to groundwater at 1740 Leslie Street could have commingled with the known releases at 1753 and 1741 Leslie Street, based on the presence of TPHd in on-Site groundwater downgradient of 1740 Leslie Street, the potential for releases at 1740 Leslie Street to migrate beneath the Site represents a REC to the Site.	N		X

Map ID (Figure 2-1)	Location		FINDINGS (ASTM 1527-13; Section 12.5)															OPINIONS (ASTM 1527-13; Section 12.6)		DATA GAPS (12.7)	CON-CLUSIONS (Sec. 12.8)
			History	Known or suspect environmental conditions	Chemicals						Reg. Closure	Known REC	Suspect REC	Controlled REC	Historical REC	*De Minimis*	Rationale	Add'l Invest. Rec. (Sec. 12.6.1) (Y/N)	Significant Data Gap	Recognized Environmental Conditions
					TPH	VOCs	SVOCs	Pesticides	Metals	PCBs										
7	1731 Leslie Street	Less than 1/8-mile to the east	Between at least the 1950s and 1970s, bulk fuel and machine shop operations were present at 1731 Leslie Street (EDR, 2020). Historical Sanborn Fire Insurance Maps depicted two 20,000-gallon gasoline ASTs present in the 1950s (EDR, 2020). 1731 Leslie Street is located hydraulically upgradient of the Site. Information regarding groundwater conditions at 1731 Leslie Street were not reasonably ascertainable. In May 2016, one groundwater sample (W-9) was collected on the Site downgradient of 1731 Leslie Street. Laboratory analysis of the groundwater sample revealed TPHd up to 838 ug/l (WEST, 2020).	Potential for releases to groundwater at 1731 Leslie Street to migrate beneath the Site.	X	X							X				Based on the historical use and storage of petroleum products, the hydraulically upgradient location with respect to the Site and the on-Site detections of TPH, the potential for releases to groundwater at 1731 Leslie Street to migrate beneath the Site represents a REC to the Site.	N		X
8	1701 Leslie Street	Less than 1/8-mile to the east	Between at least the 1950s and 1970s, Sears Roebuck & Company conducted appliance warehousing and repair operations at 1701 Leslie Street (EDR, 2020). 1701 Leslie Street is located hydraulically upgradient of the Site. Information regarding groundwater conditions at 1701 Leslie Street were not reasonably ascertainable. In May 2016, one groundwater sample (W-6) was collected on the Site and downgradient of 1701 Leslie Street. Laboratory analysis of the groundwater sample revealed TPHd at 2,950 ug/l and chloromethane at 7.81 ug/l, chloroethane at 2.65 ug/l and bromomethane at 3.08 ug/l (WEST, 2020).	Potential for releases to groundwater at 1701 Leslie Street to migrate beneath the Site.	X	X							X				Based on the historical operations, the hydraulically upgradient location with respect to the Site and the on-Site detections of TPH and VOCs, the potential for releases to groundwater at 1701 Leslie Street to migrate beneath the Site represents a REC to the Site.	N		X
9	161-167 17th Avenue	Less than 1/8-mile to the east	Between at least the 1950s and 1960s, machine repair and sheet metal operations were present at 161-167 17th Avenue (EDR, 2020). 161-167 17th Avenue is located hydraulically upgradient of the Site. In March 1992, a formerly abandoned 750-gallon gasoline UST was removed (SMCEH, 2020). Post-removal soil sampling did not indicate that a release from the UST had occurred. In May 1992, the SMCEH granted closure of the 750-gallon gasoline UST. Information regarding groundwater conditions at 161-167 17th Avenue were not reasonably ascertainable. In May 2016, one groundwater sample (W-3) was collected on the Site and downgradient of 161-167 17th Avenue. Laboratory analysis of the groundwater sample revealed TPHd up to 325 ug/l (WEST, 2020).	Potential for releases to groundwater at 161-167 17th Avenue to migrate beneath the Site.	X	X						X		X			Based on the lack of documented releases and closure of the gasoline UST by SMCEH, the potential for releases to groundwater at 161-167 17th Avenue does not represent a REC to the Site.	N

PHASE I ENVIRONMENTAL SITE ASSESSMENT
USER RESPONSIBILITY QUESTIONNAIRE
ASTM E 1527-13

Date: 10/22/20

Name and Address of User: Ken Busch Sares Regis, 901 Mariners Island Blvd.

Suite 700, San Mateo CA 94404

Name and Address of Subject Property: 401 Concar Drive, San Mateo CA

~~User's Responsibility~~ Assessor Parcel Number(s): No APN #

The purpose of this questionnaire is to identify the possibility of recognized environmental conditions in connection with the subject property known by User of the ~~Phase I ESA.~~

Question 1: Environmental liens that are filed or recorded against the property (40 CFR 312.25).

Did a search of recorded land title records (or judicial records where appropriate) identify any environmental liens filed or recorded against the property? (Circle answer)

No

If Yes, has information been forwarded to Phase I preparer? (Circle answer)

Yes No

Question 2: Activity and use limitations that are in place on the property or that have been filed or recorded against the property (40 CFR 312.26(a)(1)(v) and (vi)).

Did a search of recorded land title records (or judicial records where appropriate) identify any AULs, such as engineering controls, land use restrictions, or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law? (Circle answer)

Yes No

If Yes, has information been forwarded to Phase I preparer? (Circle answer)

Yes No

Question 3: Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.88).

Do you have any specialized knowledge or experience related to the property or nearby properties (For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals or processes used by this type of business)? Yes No

ONLY WORK THAT COMPLETED

If Yes, has information been forwarded to Phase I preparer? Yes No

Question 4: Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29).

Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property? (Circle answer)

(Yes) No

If Yes, has information been forwarded to Phase I preparer? (Circle answer)

Yes No

Question 5: Commonly known or reasonably ascertainable information about the property (40 CFR 312.30)

Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example:

Do you know the past uses of the property?

Yes (No)

Do you know of specific chemicals that are present or once were present at the property?

ONLY FROM WEST REPORT

Yes (No)

Do you know of spills or other chemical releases that have taken place at the property?

Yes (No)

Do you know of any environmental cleanups that have taken place at the property?

Yes (No)

If answered Yes to the above questions, has information been forwarded to the Phase I preparer?

Yes (No)

Question 6: The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

Based on your knowledge and experience related to the property, are there any obvious indicators that point to the presence or likely presence of releases at the property? (Circle Answer)

Yes (No)

If Yes, has information been forwarded to the Phase I preparer?

(Yes) No

Is any of the following information available regarding the subject property(s)?
(Please check all that apply)

- [x] Site/Base Maps.
- [ ] Assessors Parcel Number(s) [APN]. N A
- [x] Environment investigation/remediation/closure documents.
- [x] Environmental permits (for example, solid waste disposal permits, hazardous waste disposal permits, wastewater permits, NPDES permits).
- [ ] Registrations for underground and aboveground storage tanks.
- [ ] Material safety data sheets.
- [ ] Community right-to-know plan.
- [ ] Safety plans; preparedness and prevention plans; spill prevention, countermeasure, and control plans; etc.
- [ ] Reports regarding hydrogeologic conditions on the property or surrounding area
- [ ] Notices or other correspondence from any government agency relating to past or current violations of environmental laws with respect to the property or relating to environmental liens encumbering the property.
- [x] Hazardous waste generator notices or reports.
- [x] Geotechnical studies.
- [x] Information regarding historical site usage, e.g., aerial photographs, infrastructure drawings, utility maps, topographic maps, operations, waste disposal practices.

Planned future development use:

☑ Residential ☐ Commercial ☐ Industrial ☐ Agricultural

Current property zoning/usage:

☑ Residential ☐ Commercial ☐ Industrial ☐ Agricultural

Has above information been forwarded to Phase I preparer? (Yes) No

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/15/2020 has revealed that there are 4 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/15/2020 has revealed that there are 6 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/27/2020 has revealed that there are 7 ENVIROSTOR sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

State and tribal leaking storage tank lists

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 75 LUST sites within approximately 0.5 miles of the target property.

CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CPS-SLIC list, as provided by EDR, has revealed that there are 12 CPS-SLIC sites within approximately 0.5 miles of the target property.

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 20 SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/15/2020 has revealed that there are 34 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

DRYCLEANERS: A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial; garment pressing and cleaners' agents; linen supply; coin-operated laundries and cleaning; drycleaning plants except rugs; carpet and upholster cleaning; industrial launderers; laundry and garment services.

A review of the DRYCLEANERS list, as provided by EDR, has revealed that there is 1 DRYCLEANERS site within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HUDSON AUTOMOTIVE INC (Continued) **S121769226**

Violation Program:	HMRRP
Violation Source:	CERS
Site ID:	37236
Site Name:	HUDSON AUTOMOTIVE INC
Violation Date:	4/17/2017
Citation:	40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Description:	Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.
Violation Notes:	Returned to compliance on 04/17/2017. The 55 gallon drum of waste antifreeze had a screw in funnel, but no lid present. The used oil tank with the crusher on top did not have the cover in place. These containers are required to be kept closed except when actively filling or draining waste to/from the container or tank. Provide a picture of the closed container and tank to Env. Health within 30 days.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Site Name: KANO AUTO SERVICE
Violation Date: 9/8/2016
Citation: HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Description: Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.
Violation Notes: Returned to compliance on 02/07/2017. Provide a copy of the HMBP emergency repsonse documentation to Env. Health within 30 days.
Violation Division: San Mateo County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Site ID: 41100
Site Name: KANO AUTO SERVICE
Violation Date: 9/8/2016
Citation: 40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Description: Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.
Violation Notes: Returned to compliance on 09/08/2016. Used oil and gasoline filters drum was closed during the inspection.
Violation Division: San Mateo County Environmental Health

KANO AUTO SERVICE (Continued) **S103894289**

Violation Program: HW
Violation Source: CERS

Site ID: 41100
Site Name: KANO AUTO SERVICE
Violation Date: 9/17/2018
Citation: 22 CCR 16 66266.81(a)(4)(B) - California Code of Regulations, Title 22, Chapter 16, Section(s) 66266.81(a)(4)(B)
Violation Description: Failure to retain for at least three years a legible copy of each manifest or bill of lading which identifies spent lead-acid storage batteries shipped to a person who stores the batteries or who uses, reuses, recycles or reclaims the batteries or their components.
Violation Notes: Returned to compliance on 10/16/2018. Facility stores waste batteries on site. Provide a copy of the pickup record to Env. Health within 30 days.
Violation Division: San Mateo County Environmental Health
Violation Program: HW
Violation Source: CERS

Site ID: 41100
Site Name: KANO AUTO SERVICE
Violation Date: 9/17/2018
Citation: 40 CFR 1 265.174 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.174
Violation Description: Failure to inspect hazardous waste storage areas at least weekly and look for leaking and deteriorating containers.
Violation Notes: Returned to compliance on 10/16/2018. The containment around the waste antifreeze drums is filled with liquid. This prevents the container from being properly inspected for leaks. Corrective Action: Have the secondary containment around the 55 gallon drums of waste antifreeze pumped out. Determine if this is hazardous waste or clean rain water for proper management. Submit evidence of completion to Env. Health within 30 day.
Violation Division: San Mateo County Environmental Health
Violation Program: HW
Violation Source: CERS

Site ID: 41100
Site Name: KANO AUTO SERVICE
Violation Date: 9/17/2018
Citation: 40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Description: Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.
Violation Notes: Returned to compliance on 10/16/2018. The waste paper oil filters drum(55 gal) is full and overflowing. Corrective Action: Provide a sufficient number of closed containers to hold these materials. Have the filters picked up by the hazardous waste hauler. Submit evidence of correction to Env. Health within 30 days.
Violation Division: San Mateo County Environmental Health
Violation Program: HW
Violation Source: CERS

KANO AUTO SERVICE (Continued) **S103894289**

Site ID:	41100
Site Name:	KANO AUTO SERVICE
Violation Date:	9/8/2016
Citation:	HSC 6.5 Multiple - California Health and Safety Code, Chapter 6.5, Section(s) Multiple
Violation Description:	Hazardous Waste Generator Program - Abandonment/Illegal Disposal/Unauthorized Treatment - General
Violation Notes:	Returned to compliance on 03/10/2017. Document identification and proper disposal of 2x55 gallon drums which contain and/or contained underbody coating. One drum appears to be full. Provide manifest and documentation of disposal to Env. Health office within 30 days. Label empty drums with the date emptied and have them picked up within one year. Options may include: - By reclaiming the containerG s scrap value onsite; - By sending the container to a person who reclaims the containerG s scrap value; - By reconditioning or remanufacturing the container onsite; or - By shipping the container to a person who reconditions or remanufactures the container. Document recycling if that option is used. Provide documentation for disposal of empty drums stored over 1 year within 30 days to Env. Health.
Violation Division:	San Mateo County Environmental Health
Violation Program:	HW

Citation:	HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description:	Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes:	OBSERVED: The 180 day accumulation time limit has been exceeded for waste antifreeze and hazardous waste oil filters (metal and paper mixed). The date for the waste antifreeze could not be located and the date for the filters was 7/3/19. REQUIRED ACTION: Have the waste antifreeze and filters picked up by your hazardous waste hauler and provide a copy (or picture) of the hazardous waste manifest to Env. Health by the comply by date. Or, if any more recent pickup records are located, send a copy or picture of those records. Note: The facility may be able to use satellite accumulation rules, going forward, however please review the rules noted on the guidance document #9 and verify the facility can be in compliance with the requirements.

application. We were able to observe records including a training log and a used oil manifest. The emergency posting was also viewed. During the shop and back yard area inspection, the 55 gallon drums and container were observed and labels reviewed. Facility has the following waste on site: - 100 gal used oil tank, 2 x 55 gallon drums used oil - 55 gal waste antifreeze poly drum (and one spare drum) - 3x55 gal new oil drums, steel - 1x55 gal steel drum of hazardous waste oil and gasoline filters. No spills were observed in the shop and it appeared to be clean and well maintained. Facility reminded to cover the storm drain or otherwise prevent spills from entering the storm drain in the back yard outdoor service area.

Mailing Name: Not reported
Mailing Address: 308 S. AKARD ST. 17TH FLOOR

Year: 2019
Gepaid: CAT080021355
TSD EPA ID: CAD982042475
CA Waste Code: 151 - Asbestos containing waste
Disposal Method: H132 - Landfill Or Surface Impoundment That Will Be Closed As Landfill(To Include On-Site Treatment And/Or Stabilization)
Tons: 0.23000

Year: 2019
Gepaid: CAT080021355
TSD EPA ID: AZR000515924
CA Waste Code: 352 - Other organic solids
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.06500

Year: 2019
Gepaid: CAT080021355
TSD EPA ID: CAT080012602
CA Waste Code: 221 - Waste oil and mixed oil
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.00000

Year: 2019
Gepaid: CAT080021355
TSD EPA ID: CAT080012602
CA Waste Code: 133 - Aqueous solution with total organic residues 10 percent or more
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.04170

Year: 2019
Gepaid: CAT080021355
TSD EPA ID: CAD008252405
CA Waste Code: 223 - Unspecified oil-containing waste
Disposal Method: H061 - Fuel Blending Prior To Energy Recovery At Another Site
Tons: 0.05000

Year: 2019
Gepaid: CAT080021355
TSD EPA ID: AZR000521146
CA Waste Code: 352 - Other organic solids
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.04750

Year: 2019
Gepaid: CAT080021355
TSD EPA ID: CAT080013352
CA Waste Code: 135 - Unspecified aqueous solution
Disposal Method: H039 - Other Recovery Of Reclamation For Reuse Including Acid Regeneration, Organics Recovery Ect
Tons: 0.11340

PACIFIC BELL TELEPHONE CO DBA AT&T CALIF (Continued) **S113179877**

Year:	2019

Site Name:	USPS - San Mateo
Violation Date:	5/17/2018
Citation:	40 CFR 1 265.201(c)(3) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.201(c)(3)
Violation Description:	Failure to inspect hazardous waste tanks at least once each operating day for the following, when present: (1) Discharge control equipment (e.g., waste feed cutoff systems, by-pass systems, and drainage systems) to ensure that it is in good working order; (2) Data gathered from monitoring equipment (e.g., pressure and temperature gauges) to ensure that the tank is being operated according to its design; (3) The level of waste in the tank.
Violation Notes:	Returned to compliance on 05/21/2018. The waste antifreeze tank is required to be inspected daily along with the used oil tank. Only the used oil tank is currently indicated on the log.

Citation:	HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description:	Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal

USPS - SAN MATEO (Continued) **S121792152**

	Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes:	Returned to compliance on 05/17/2018. Waste antifreeze is routinely picked up when the tank reaches 200 gallons. However, the waste is required to be removed every 180 days. The last pickup was 4/4/18 so the facility is now in compliance and must have the waste picked up by approximately Oct. 1st or earlier.

Violation Description:	Failure to send a legible copy of each hazardous waste manifest to the Department within 30 days of each shipment of hazardous waste.
Violation Notes:	OBSERVATION: Facility managment was not aware of the requirement to mail written copies of the manifest to DTSC within 30 days (event though they have access to the RCRA info tracking system). REQUIRED ACTION: Mail copies of each manifest to DTSC. Submit evidence of completion to Env. Health within 30 days. Reference: DTSC Manifest webpage - https://dtsc.ca.gov/hazardous-waste-manifest-information/ (Manifest Submission to DTSC or U.S. EPA Generators). Under California law, generators will still be required to send the generator copy of the manifest to DTSC by mail. The only exception is when a manifest starts and finishes as an electronic manifest in the e-Manifest System. The generator shall within 30 days of each shipment of hazardous waste submit to DTSC a legible copy of each manifest used. Please send to: DTSC Generator Manifests Department of Toxic Substances Control P.O. Box 400 Sacramento, CA 95812-0400

Violations Found:	Yes
Eval Type:	Routine done by local agency
Eval Notes:	EPA ID CAL000069144 is active and most manifests were available at the time of the inspection. Manifests from the last 2 years were reviewed during the inspection (please make sure oily water 6/28/19 and absorbent 5/16/19 are in the file) . Based on calculations, facility generates between 1450-1750 lbs of hazardous waste per month. Some months, the facility generates seems to generate 2000+ pounds, mainly due to the quantity of used oil generated. If the facility exceeds 2200 lbs, additional large quantity generator requirements will become applicable. The following waste tanks and containers were observed during the inspection: (Estimated waste generated noted below) Used Oil estimated 150-250gal/month Used coolant 220 gal/year Compressor water 60 lbs/month Used oil filters (metal) 2-3 drums per year (Please provide the most recent record of pick up) Used absorbent/paper filters 150-200 lbs every 6 months (please provide the most recent record if after [Truncated]

Potential Media Affect:	Soil, Soil Vapor, Surface water
Potential Contaminants of Concern:	Gasoline
Site History:	Extracted from Brunsing Associates' July 7, 2006 Soil and Groundwater Investigation Report, San Mateo County does not take responsibility for the accuracy of the statements made or any professional interpretations made in the referenced report. According to the Dames & Moore, Inc. (DMI) "Report of Geohydrological Consultation," dated November 20, 1984, one 4,000-gallon and two 3,000-gallon gasoline USTs were installed at the site in the 1950's, and one 10,000-gallon gasoline UST was installed in the 1970's. Water was reported in the three smaller tanks, and as a result, the 4,000-gallon tank was taken out of service before 1984. A 200-gallon gasoline spill occurred in 1983 when new pumps were being installed. DM1 installed monitoring wells B-1 through B-4 in October 1984, prior to the removal of the on site USTs. After installation of well B-2, approximately 18 inches of floating product were measured in the well. In April 1985, the four gasoline tanks were emptied of their contents and tank tightness tests were performed on the USTs. Water and product levels were measured in the former gasoline tanks in February 1986, to determine whether seepage had occurred from the surrounding soil and groundwater. Two additional monitoring wells (B-5 and B-6) were also installed in 1985. Monitoring well B-7 was installed up-gradient of the USTs on February 6,1986 by DMI. Based on BAI's file review of the DM1 reports, no soil samples were collected for laboratory chemical

CITY AUTO REPAIR SHOP (Continued) **S103894113**

analysis during the drilling of wells B-1 through B-7, however soil permabilities and a sieve analyses were performed for samples from borings B-2 and B-7. In October 1984, 1.5 feet of free product was observed in well B-2, however no free product was observed in wells B-1, B-3, and B-4. In May of 1985, free product was observed in wells B-2, B-3, and B-4 at thicknesses of 0.58 feet, 0.33 feet, and 0.41 feet, respectively. In February 1986, free product was again observed in wells B-2 and B-4, according to DMI's report "Observation Well Installation, Service Station Property" dated March 5, 1986. According to DMI's "Project Report Construction Management for Remedial Action Work (Phase V)", dated March 3, 1987, all four gasoline USTs and a waste oil UST were removed from the site in April and May 1986. The gasoline UST excavation was approximately 10 feet deep. Four to five feet of pea gravel was placed in the bottom of the excavation to facilitate backfill of the excavation below the water table. Prior to backfilling with pea gravel, floating product was skimmed from the surface of the water contained in the excavation to a thickness of 0.25 inches, and a geotextile liner was placed above the gravel. Two sloped collector trenches were excavated to drain groundwater back to the UST excavation. The trenches were excavated to approximately 8 to 10 feet below ground surface (bgs), in segments to prevent caving of the sides. To prevent infiltration of the fines, a geotextile filter fabric was used to line the trenches. The trenches were partially backfilled with 5 to 6.5 feet of washed river gravel, and the filter fabric was folded over the top of the gravel. Both the UST excavation and the trenches were backfilled and compacted to the surface with native soil that had been aerated to remove petroleum hydrocarbon contamination, and compacted. DMI's as-built drawings for the excavation and trench areas (referred to herein as French drain) were included in BAI's "Site Conceptual Model" report, dated December 22, 2004. Five standpipes (SPA, SPB, SPC, SPD, and SPG) were also installed in the trenches during backfilling activities. Well B-2 was abandoned during the construction and replaced with standpipe SPC. SPF was installed with a drill rig after the excavation had been backfilled. Additionally, recovery well RW-1 (now replaced by well EW-1) was installed to a depth of 20 feet bgs with a screened interval from 2 to 15 feet bgs near the center ofthe UST excavation. A pumping test on well RW-1 was also performed at this time. Pumping rates of 30 to 100 gallons per minute were observed to draw down water levels. Approximately 500 gallons of floating product and 2,000 gallons of water were removed during the excavation and pumping test activities. In April 1989, DM1 supervised the drilling and sampling of nine borings (HP-1, HP-2, HP-3, HP-6 through HP-9, HP-IOA, and HP-1lA) to characterize the off site groundwater contamination. The results of the investigation were presented in DMI's report dated May 5, 1989. In January 1993, a groundwater remediation system designed by DM1 was constructed by BAI. The remediation system consisted of groundwater extraction from well EW-1, with treatment by activated carbon. The water was to be discharged to the drainage ditch north of the site under a National Pollutant Discharge Elimination System (NPDES) permit. The system was started in October 1993 but failed to meet the NPDES discharge requirements for organics. After replacing the activated carbon units, the system was started in January 1994. At this time, the discharge water failed the 96-hour fish bioassay (toxicity) test, and the treatment system was shut down. BAI prepared a soil and groundwater investigation workplan dated August 1, 1996, to satisfy

CITY AUTO REPAIR SHOP (Continued) **S103894113**

the requirements of the SMCHD. The site investigation was conducted on December 13, 1996, and the investigation results are presented in BAI's "Soil and Groundwater Investigation Report," dated February 10,1997. During the December 1996 investigation, three off site soil borings (OSB-1, OSB-2, and OSB-4) and one on site soil boring (OSB-3) were drilled. Groundwater samples were collected from each of the four soil borings, and soil samples were collected only from borings OSB-1, OSB-2, and OSB-3. No soil sample was collected from boring OSB-4 because the soil encountered in boring OSB-4 was saturated at approximately one-foot bgs. Petroleum hydrocarbons were observed in the soil samples collected from borings OSB-2 at 4.5 feet bgs and OSB-3 at 4.5 feet bgs, but were not observed in the soil samples collected from OSB-1 at 8 feet bgs and OSB-2 at 10.5 feet bgs. Petroleum hydrocarbons were reported in all of the grab groundwater samples. In a letter dated April 2, 1997, the SMCHD indicated that the extent of groundwater contamination needed to be further defined in the west, southwest, and east directions, and that an additional monitoring well needed to be installed in the down-gradient direction to identify the plume boundary. BAI submitted a workplan dated June 3, 1997 to satisfy a SMCHD's request. The workplan was approved in the SMCHD 's letter dated June 16, 1997. The work was conducted in November and December 1997, and presented in BAI's "Soil and Groundwater Investigation and Quarterly Groundwater Monitoring Report," dated March 20, 1998. As part of the investigation, six soil borings (OSB-5 through OSB-10) were advanced off site to define the lateral extent of contamination on adjacent properties. Furthermore, a groundwater monitoring well (MW-1) was installed in the down-gradient direction, in South Delaware Street. The purpose of well MW-1 was to define the down-gradient extent of groundwater contamination. In a SMCHD letter dated March 24, 1998, the agency requested submittal of a feasibility study (FS) to discuss remedial options and to make recommendations for site cleanup. A soil vapor extraction (SVE) pilot study was performed in April 1998, prior to the preparation of the FS. The results of the study indicated that soil vapor extraction from well RW-1 resulted in measurable vacuum levels at the majority of standpipe wells within the granular backfill but did not have a measurable effect in wells B-1, B-3, B-4, B-5, and B-6, and standpipe SPD. The pilot study also investigated the effectiveness of extraction from wells SPF and SPD. Laboratory analytical testing of the extracted vapor during extraction from well RW-1 reportedly contained 5,600 milligrams per cubic meter (mg/m3) of TPH as gasoline. BAI completed the FS dated July 1, 1998, with an addendum dated August 4, 1998. The estimated mass of contaminants remaining was approximately 1,000 pounds, with a significant portion of the contaminants being located below the water table. The FS included a domestic well survey, the results of the soil vapor extraction pilot test, and a recommendation for site cleanup using soil vapor and groundwater extraction combined with air sparging. The domestic well survey did not identify any domestic wells within a 600-foot radius, but did identify the adjacent ditch as a potential sensitive receptor. In the SMCHD letter dated July 9, 1998, the agency concurred with the recommendations and requested submittal of a remedial action plan (RAP) for this option. BAI completed the RAP, dated November 9, 1998, which included design specifications and construction details for soil vapor and groundwater extraction combined with air sparging. The RAP was approved by the SMCHD in their correspondence dated November 19,1998. The construction phases

CITY AUTO REPAIR SHOP (Continued) **S103894113**

of the RAP occurred concurrently with re-development of the site, from a service station to a car wash. In October 1999, BAI installed five dual-phase soil vapor extractiodair sparge wells (DSP-1 through DSP-5); four sparge wells (SP-1 through SP-4), and replaced extraction well RW-1 with extraction well EW-1. In 2000, the soil vapor and groundwater treatment system was installed, which included plumbing to the new extractiodsparge wells, a pneumatic pump in well EW-1, an air compressor, a regenerative blower, an air stripper, two liquid phase carbon vessels and a catalytic oxidizer. Operation of the treatment system commenced on October 22, 2000. Remediation reports have been submitted which provide the operational details of the remediation system. On September 4, 2001, monitoring well MW-2 was installed in a cross gradient direction in South Delaware Street, as proposed in the remedial action plan. Installation of well MW-2 was documented in a report dated October 12, 2001. No soil samples were collected for analytical laboratory analyses due to the proximity of boring OSB-2. In December 2002, the remedial system was shut down for performance modifications on the system. The modifications included increasing the capacity of the blower to a positive displacement blower from a regenerative blower in order to increase the vacuum supplied to the subsurface. The modification was due in part to problems associated with the highly brackish groundwater at the site. The modifications were completed and the system was restarted on September 17,2003. On February 20, 2003, BAI submitted the groundwater investigation workplan. The workplan proposed seven additional off site borings, a drainage ditch evaluation, and an updated sensitive receptor survey (SRS). The seven additional off site borings were proposed because the previous off site drilling was performed prior to the requirement to analyze samples for petroleum oxygenates and lead scavengers. The drainage ditch evaluation was proposed to determine if the adjacent drainage ditch was hydraulically connected to the site. The initial SRS was performed prior to the requirement to evaluate for conduits of water and vapor migration and surface waters, therefore the SRS was updated. Off site soil borings ASB-1 through ASB-6 were drilled on November 6,2003 and April 19,2004. the results of the investigation were reported in BAI's "Soil and Groundwater Investigation Report", dated March 29,2005. The remediation system was operational until September 21,2004 when the system was shut down while the site conceptual model for the site was prepared. During the operational period, groundwater drawdown of approximately 1 to 2 feet in the vicinity of well EW-1 was generally observed. Vapor samples fiom the remedial system extracting from wellsDSP-1 through DSP-5, and EW-1 did not show significant petroleum hydrocarbon recovery, and sparge wells were not used because of the concern for potential movement of hydrocarbon vapors in the subsurface along utility lines. In July and August 2004, BAI performed a series of minor system modifications to increase the influent vapor concentrations. These modifications included using dual-phase extraction to pull directly from wells B-3, B-4, and SPC. Extraction from wells B-3 and B-4 was relatively successful at increasing influent vapor concentrations. Only limited extraction was performed in well SPC because of high groundwater flow rates from well SPC. Analytical laboratory data from January and July 2004 data indicated that foaming and unexplainable elevated concentrations of tert-butyl alcohol (TBA) were occurring in several of the groundwater samples. As discussed in BAI's November 2, 2004 remediation report, a sample was collected fiom well SPC and the car

CITY AUTO REPAIR SHOP (Continued) **S103894113**

wash water discharge to evaluate for general minerals, and the foaming agent methyl blue active substances (MBAS) on August 12, 2004. The results indicated that MBAS was observed in both the groundwater and car wash water at the site. BAI's "Site Conceptual Model" report, dated December 22,2004, recommended several actions be performed prior to recommending any alterations to the current remediation system, including additional drilling to define the residual contamination, collection of data regarding the car wash inputs and outputs, collecting a sample of the car wash water to be analyzed for TBA and general minerals, attempt to locate monitoring well B-7, and evaluate if well B-1 extended into a deeper water bearing unit. The SMCHD approved these recommendations in their January 18, 2005 correspondence. The workplan for this additional work was dated March 22, 2005 and submitted to the SMCHD.

Click Here:

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Local Case Number:	110121
Potential Media Affect:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	Gasoline
Site History:	Extracted from TEC Accutite's April 10, 2009 Additional Site Assessment Work Plan, San Mateo County does not take responsibility for the accuracy of the statements made or any professional interpretations made in the referenced report. The subject site is currently operating as a service station. The on-site building includes an office and an automotive repair facility. On-site fueling facilities consist of two dispenser islands and one 20,000-gallon, three-compartment underground storage tank (UST) containing unleaded regular gasoline, unleaded premium gasoline, and diesel. The San Mateo County Assessor s Parcel Number for the site is 035-213-050. The surrounding land use is both commercial and residential. Site elevation is approximately 15 feet above mean sea level (ft msl). A drainage canal located approximately 1,000 feet northeast of the site flows east towards the nearest surface water of Seal Slough, located approximately one mile east of the site. San Mateo Creek is located approximately 1 mile north of the site, and the San Francisco Bay is located approximately 1.5 miles east of the site. The property located southeast of the site (directly across 17th Street, identified as 1705 Palm Avenue APNs 123-660-010 through 123-660-190) was recently re-developed as a multi-unit residential housing complex with a sub-grade parking structure below the housing units. The concrete-slab floor of the subgrade parking structure is approximately 10 feet below surface grade (ft bsg). A file review for the 1705 Palm Avenue property did not indicate that provisions for de-watering were needed or constructed at the sub-grade parking structure. On August 4, 1998, TEC Accutite removed five USTs from the subject site. After the UST removal, soil staining and petroleum hydrocarbon odor were noticed in the excavation pit. Significant concentrations of petroleum hydrocarbons were detected in soil and groundwater samples collected from the excavation pit. A synopsis of site assessment activities related to the former USTs is provided below: August 1998 Five USTs removed; petroleum hydrocarbons detected in soil and groundwater confirmation samples. August 1998 Soil over-excavation; petroleum hydrocarbons detected in soil and groundwater confirmation samples. August 1999 Five soil borings advanced (B-1 through B-5); petroleum hydrocarbons detected in soil and grab groundwater samples. February 2000 Ten soil borings advanced (B-6 through B-15); petroleum hydrocarbons were detected in soil and grab groundwater samples. October 2000 Four groundwater monitoring wells installed onsite and offsite (MW-1 through MW-4); petroleum hydrocarbons detected in soil and groundwater. September 2002 Three monitoring wells installed onsite (MW-5 through MW-7); petroleum hydrocarbons detected in soil and groundwater; evidence indicates groundwater beneath the site is confined below 20 feet below surface grade (ft bsg). February 2003 Site Conceptual Model (SCM) developed. May 2003 Door to door well survey, underground utility survey and

BOB REED'S SERVICE STATIO (Continued) **S102270472**

sensitive receptor survey; soil vapor investigation conducted. July August 2003 Down-gradient irrigation well identified and sampled; no detectable concentrations of petroleum hydrocarbons reported by laboratory. September 2003 Groundwater monitoring wells MW-1 through MW-3 destroyed to eliminate possible vertical conduit between shallow water-bearing zone and deeper waterbearing zone; four off-site groundwater monitoring wells installed (MW-8 through MW-11); petroleum hydrocarbons detected in groundwater. October 2004 Five cone penetration test (CPT) borings installed (CPT-1 through CPT-5); Evidence indicates two water-bearing zones exist beneath the site: one approximately 20 to 30 ft bsg and another at approximately 42 - 45 ft bsg. March 2005 Off-site wells MW-8 through MW-10 destroyed at request of property owner to facilitate re-development. September 2005 SCM updated. February 2006 Soil vapor samples were collected; an incomplete human health exposure pathway for remaining contamination was identified. November 2007 Soil vapor confirmation sampling conducted; results consistent with previous investigations although presence of leak indicator and elevated atmospheric gases indicates a sampling system leakage may have occurred during sampling. The monitoring well network at the subject site consists of 5 groundwater monitoring wells (MW-4 through MW-7 and MW-11). Monitoring wells MW-5 and MW-7 were not routinely sampled, but were used for recording depth to groundwater measurements. Groundwater monitoring wells MW-5, MW-6 and MW-7 are located on-site; wells MW-4 and MW-11 are located in 17th Street, southeast and east, respectively, of the site. The groundwater monitoring well network has not been sampled since July 2007. Remaining data gaps in the current site conceptual model include: the stability of the off-site dissolved phase fuel oxygenate plume beneath the recently constructed residences southeast of the site and the extent of COCs in soil vapor on- and off-site.

Violation Description:	Failure to keep water out of the secondary containment of UST systems installed on or after July 1, 2003 and before July 1, 2004, or on or after July 1, 2004.
Violation Notes:	Returned to compliance on 11/08/2016. The premium sump was filled with a couple of inches of water in the low point. This is likely due to recent rains. Continue to maintain sump cover seals to avoid the collection of rain water. Additionally, see the other note regarding the proper placement of the sensor to assure that leaks are detected and corrected in a timely manner. This sump was cleaned out during the

Citation: HSC 6.7 Multiple - California Health and Safety Code, Chapter 6.7, Section(s) Multiple
Violation Description: UST Program -General - Must include violation description, proper statute and regulation citation in the "comment" section.
Violation Notes: Returned to compliance on 11/16/2017. The facility is required to notify San Mateo County Env. Heatlh prior to a cold-start. This was discussed during the previous inspection. The records show a cold-start occured on Dec. 15, 2016 for a payment system upgrade. This was one month following the monitoring cert. and no further concerns regarding the alarms are indicated at this time.

Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-21-2018
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: DARYL.LEE@BP.COM Next Monitoring Cert is due in June 2019. Overfill

ARCO 04495 (Continued) **S121790253**

Prevention is required to be tested at the next inspection. Ensure overfill system is set at proper intervals and improve communication with fuel delivery drivers to minimize the number of High Product Alarms. Facility had 3 overfill alarms (90% or 8,41 gallons) on all three tanks last month on 3 tanks. High Product alarms (95% or 9,015 gallons) was noted in March, April and June. Max Product (9,490 gallons) was only noted during the last monitoring cert.

Potential Media Affect:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	Gasoline
Site History:	Extracted from ERI's July 22, 2005 Work Plan for Supplemental Site Assessment of Shallow Soil, San Mateo County does not take responsibility for the accuracy of the statements made or any professional interpretations made in the referenced report. The site is located on the southeast corner of South Delaware Street and Concar Drive in San Mateo, California, as shown on the Site Vicinity Map. The locations of the former underground storage tanks (USTs), former dispenser islands, groundwater monitoring wells, soil boring locations, and other select site features are shown on the Generalized Site Plan. Properties in the vicinity of the site are occupied by residential and commercial developments, including a Shell service station located on the northwest corner of South Delaware Street and Concar Drive. Currently there are five groundwater monitoring wells (MW2, MW3A, MW4, MW5A, and MW7), six piezometers (PZI through PZ6), and one groundwater extraction well (EWI) at the subject site. One groundwater monitoring well (MW6) is located in the sidewalk adjacent to South Delaware Street, west of the subject site. The piezometers and extraction well are completed in a groundwater extraction trench. Gasoline delivery lines were removed and replaced in 1982 as a result of a failed pressure test. In July 1986, a hydrocarbon sheen was observed on the groundwater surface in a trench (approximately 1 foot below grade) during

EXXON 7-4135 (FORMER) (Continued) **S103894102**

modification of the gasoline delivery line and pump island. Water collected from the pump island trench contained dissolved-gasoline hydrocarbons. In November 1991, two oil-water separators in station building garage bays were removed by IT Corporation. Soil samples were collected at each location and a groundwater sample was collected at one of the locations. In February and March 1998, ERI observed removal of three gasoline USTs, one used oil UST, five hoists, product lines, and dispensers. No holes or cracks were observed in the tanks except for one crack near the fill port of the used oil UST. Over-excavation was conducted around the used oil UST, along product lines, and near dispenser islands. Soil samples A through U were collected from sidewalls of the excavated areas. Well MW1 was installed prior to HLA's first documented sampling event in May 1989. In December 1989, HLA installed monitoring wells MW2, MW3, and MW4 at the site. In October 1990, HLA advanced borings B1 through B6, installed groundwater monitoring wells MW5 through MW7, and conducted a slug test to estimate the transmissivity and hydraulic conductivity of the aquifer at the site. HLA estimated a hydraulic conductivity ranging from 0.21 to 1.28 feet per day and the groundwater velocity from 0.05 to 0.07 feet per day. In August 1991, HLA destroyed groundwater monitoring wells MW3 and MW5 to facilitate soil excavation and interceptor trench installation. During September and October 1991, HLA installed piezometers PZ1 through PZ6 and extraction well EW1 during construction of the groundwater interceptor trench. During repaving of the site, four of the piezometers and groundwater monitoring well MW2 were paved over with asphalt. In January 1992, HLA uncovered well MW2 and found the interior of the casing to be filled with soil. In May 1992, HLA cleared soil from the casing and reported a sheen on the groundwater. In February 1992, HLA advanced soil borings B1 through B7 at the site. Two of the borings were converted to wells MW3A and MW5A. In July 1997, ERI advanced soil borings SB? through SB3 using a hand auger. Well MW1 was destroyed by ERI during UST removal activities. In November 2002, ERI advanced soil borings SB4, and SB8 through SB12. Soil and water samples were collected. In January 2003, ERI advanced soil borings SB5a, SBSb, SB6, SB7, and SB13. In September 2004, ERI advanced soil borings SBIOA, SB11 A, SB12A, and SBONV at the subject site. Also in September 2004, ERI conducted a subsurface utility survey and advanced soil borings SL1 through SL8 into subsurface utility line backfill materials in Concar Drive and South Delaware Street. HLA bailed free product from wells MWI, MW2, and MW3 on a monthly basis from December 1989 through November 1993. In August 1991, HLA observed excavation of approximately 1,300 cubic yards of soil from the northwest quarter of the site and backfilled the excavation with Class Ill aggregate. Soil samples 1 through 13 were collected from the sidewalls of the excavation. During September and October 1991, HLA installed the groundwater interceptor trench. Soil samples 14 through 17 were collected during trench installation. During installation, HLA discovered oil and grease in the vicinity of the used oil UST. In September 1991, the interceptor trench contained approximately 15,000 gallons of water. HLA supervised dewatering and collected samples from the piezometers. In September 1993, RESNA conducted a combined pumping and recovery test using well EW1 as the pumping well. RESNA determined the transmissivities of the native sediments (Bay Mud) are very low to moderate (5x10-~f2 1min) and concluded that, "it does not appear that pumping from EW1 can gain hydraulic control of wells toward the distal end of the interceptor

EXXON 7-4135 (FORMER) (Continued) **S103894102**

trench. ERI operated the groundwater extraction system continuously from August 24, 1994, through March 18, 1998. Quarterly groundwater monitoring and sampling was initiated at the site in May 1989. ERI began quarterly monitoring and sampling in 1994. Semi-annual monitoring and sampling (first and third quarters) was initiated in 2003. ERI conducted an underground utility survey in 2003 by obtaining storm drain, sanitary sewer, water, and gas line maps showing their approximate locations in Concar Drive and South Delaware Street. ERI conducted a groundwater receptor survey in 2003. No water wells were identified within 750 feet of site. Receptor survey questionnaires were mailed to residents within the search radius and followed up with a door-to-door survey of non-respondents and a visual reconnaissance of the area for wells, basements, and surface water bodies on February 13, 2003. ERI also conducted a land use survey during the field reconnaissance in February 2003. In April 2004 and March 2005, ERI conducted sensitive receptor survey (SRS) updates including file reviews and field visits. ERI contacted the Sacramento District office of the California Department of Water Resources (DWR) and requested information regarding water wells within a 2,000-foot radius of the site from the well driller's report archive. ERI also contacted the GPP and the City of San Bruno Public Works and Engineering Department (the City) and requested information regarding water wells in the survey radius. ERI contacted the City and other local utility agencies and obtained subsurface utility maps of Concar Drive and South Delaware Street adjacent to the subject site. On April 29, 2004, and March 11, 2005, ERl's representative visited the site and conducted a reconnaissance of the area within a 2,000-foot radius of the site for evidence of private and municipal water wells and buildings with basements; mapped the locations of surface water bodies, schools and daycare centers, hospitals, subways, and tunnels within the survey radius; photographed the site, utility vaults, storm drains, surface water bodies, and potential receptors; and mapped the locations of on-site utility vaults and storm drains. The location of one inactive irrigation water well, identified in the DWR search, was confirmed on East 19th Avenue, approximately 985 feet southwest of the subject site. One surface water body, an unnamed drainage ditch, was identified approximately 1,310 feet northwest of the subject site.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Violation Date: 1/3/2019
Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1,- 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October- 1,- 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes: Returned to compliance on 09/18/2019. Waiting on overfill prevention

Violations:

Site ID:	19870
Site Name:	CITY OF SAN MATEO MUNICIPAL SERVICES CTR
Violation Date:	1/3/2019
Citation:	23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description:	Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1,- 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October- 1,- 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30

CITY OF SAN MATEO MUNICIPAL SERVICES CTR (Continued) **S121751419**

days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Violation Notes: Returned to compliance on 09/18/2019. Waiting on overfill prevention testing

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERS HAZ WASTE:
Name: ROSS DRESS FOR LESS #0123
Address: 640 CONCAR DR
City,State,Zip: SAN MATEO, CA 94402
Site ID: 149041
CERS ID: 10505983
CERS Description: Hazardous Waste Generator

Violations:
Site ID: 149041
Site Name: Ross Dress For Less #0123
Violation Date: 12/8/2016
Citation: 22 CCR 12 66262.23(a)(4) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.23(a)(4)
Violation Description: Failure to send a legible copy of each hazardous waste manifest to the Department within 30 days of each shipment of hazardous waste.
Violation Notes: Returned to compliance on 01/05/2017. Facility manager did not know if copies had been sent to DTSC. This is the generator's responsibility. Please provide a written response describing the procedures for sending a copy of the manifest to DTSC within 30 days. Send this to Env. Health within 30 days.
Violation Division: San Mateo County Environmental Health
Violation Program: HW
Violation Source: CERS

Site ID: 149041
Site Name: Ross Dress For Less #0123
Violation Date: 12/12/2018
Citation: 40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Description: Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.
Violation Notes: Returned to compliance on 01/09/2019. Containers of hazardous waste have materials stacked on them and are very full. Not all of the containers were properly closed. Address this area and provide a picture showing that all containers are properly closed. Submit that to Env. Health within 30 days.
Violation Division: San Mateo County Environmental Health
Violation Program: HW
Violation Source: CERS

ROSS DRESS FOR LESS #0123 (Continued) **S118937677**

Site ID:	149041
Site Name:	Ross Dress For Less #0123
Violation Date:	12/12/2018
Citation:	40 CFR 1 262.34(d)(5)(iii) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 262.34(d)(5)(iii)
Violation Description:	Failure to ensure that all employees are thoroughly familiar with proper waste handling and emergency procedures, relevant to their responsibilities during normal facility operations and emergencies.
Violation Notes:	Returned to compliance on 01/08/2019. Body products were found in the hazardous waste acid container. Re-train employees on proper segregation and verify the hazardous waste has been put into the proper container. Recommend posting some additional training materials to ensure staff is aware of proper segregation practices. Submit evidence of documented re-training on hazardous waste, segregation, and universal waste with all applicable staff. General staff should have some general awareness training to prevent improper disposal.
Violation Division:	San Mateo County Environmental Health
Violation Program:	HW
Violation Source:	CERS

Site ID:	149041
Site Name:	Ross Dress For Less #0123
Violation Date:	12/12/2018
Citation:	22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description:	Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
Violation Notes:	Returned to compliance on 01/24/2019. The final copies of the manifests listed below are missing from the binder on site. 001530719PSC 001498549PSC Submit a copy to Env. Health and keep a copy on site. Submit correction within 30 days. Note: Manifest 9/11/17 is not posted in HWTS 001645454PSC.

Eval Source:	CERS
Eval General Type:	Other/Unknown
Eval Date:	03-11-2020
Violations Found:	No
Eval Type:	Other, not routine, done by local agency
Eval Notes:	Accepted with minor comments: A. Fed hazard categories updated. Please update the used oil federal hazard category. Used oil is not flammable. Typical categories for used oil are: 1. Skin Corrosion or Irritation, 2. Serious eye damage or eye irritation, 3. Respiratory or Skin Sensitization. B. Used oil is listed as stored in a plastic drum. This was previously observed to be in a steel drum. Waste antifreeze was also stored in a plastic drum, so please add that to the container types when on the next submission. C. Update the map to include the location of used oil filters at the front of the shop.

Eval General Type: Compliance Evaluation Inspection
Eval Date: 04-16-2019
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Prelimary monitoring Cert Inspection. Cert occurred during Annual CUPA meeting, so Inspector only was not able to complete the inspection at this time. The inspector will finish paperwork inspection on May 23rd during scheduled SB989 Inspection. Afforda/test completeted testing all sensors. All 7 sensors and 4 stand alone UDC sensors. No problems noted with sensor. The overspill bucket on waste oil was full of oil. Contractor left oil in bucket

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

MOBIL 10-FLN / BP #11196 (Continued) **S116282743**

Site History: Extracted from Delta's April 30, 2010 Site Conceptual Model, San Mateo County takes no responsibility for the accuracy of the information presented or the professional interpretations made. An interim permit for storage of hazardous materials in USTs was issued to Mobil Oil Corporation in September 1985. BP reportedly purchased the facility from Mobil Oil Corporation in 1989. The former USTs at the site included one 280-gallon waste oil UST, one 4,000-gallon gasoline UST, and two 6,000-gallon gasoline USTs. The site was transferred to Tosco Marketing Company (Tosco, currently ConocoPhillips) in 1994. The current property owner is TJ Culligan Family Partners, L.P., c/o Tosco Corporation, L.C., 3700 S. El Camino Real, San Mateo, California 94403. A former 550-gallon diesel fuel UST was previously located behind (south) of the site building. The UST was removed in 1986 along with the other USTs which were replaced at the same locations. The diesel tank was not replaced. The application for UST removal in 1986 indicated that the existing USTs were installed in 1956. The station was renovated in June and July 1991. A former dispenser pump island previously located in the western portion of the site was removed during site renovation. Kaprealian Engineering, Inc. (KEI) on May 8, 1986, observed the removal of four USTs; two 6,000-gallon gasoline tanks, one 4,000-gallon gasoline tank, and one 280-gallon used oil tank. One of the 6,000-gallon regular fuel tanks was reported to have been ruptured at one end. Four side-wall excavation soil samples were collected and analyzed. The highest TPH-G concentration was in the soil sample taken from the northeast wall of the excavation (1,900 parts per million ppm). Two groundwater samples were taken from the excavation and composited in the laboratory. The groundwater samples contained total petroleum hydrocarbons concentrations at 9,900 parts per billion (ppb) and benzene of 130 ppb. KEI on October 27, 1986 observed the removal of one UST, a 4,000-gallon diesel fuel tank located in the southern portion of the site behind the station building. Visual inspection of the tank indicated no evidence of excessive corrosion or leaks. Two soil samples were collected from the soil removed from the excavation. No analytes were detected in either samples. On November 14, 1986, three groundwater monitoring wells (MW-1 through MW-3) were installed in order to define the extent of petroleum hydrocarbons detected during the UST removals. The 2-inch wells were placed adjacent to the fuel USTs. Well MW-1 was constructed with a screen interval of 7 to 35 feet below ground surface (bgs) and wells MW-2 and MW-3 were constructed with a screen interval of 7 to 25 feet bgs. Soils encountered during drilling varied from sandy to silty clay (Unified Soil Classification Symbol CL) from 3 to 25 feet bgs overlying native organic rich clay (CH) to the total depth explored of 35 feet bgs. Groundwater was first encountered in the borings at depths of 8.5 to 9.5 feet bgs. A second saturated zone was encountered at 13 feet and 25.5 feet bgs. Total petroleum hydrocarbons (TPH) were detected in a soil sample from the site boring for well MW-1 at 150 ppm. No soil sample was collected from the boring for the well MW-2. TPH was not detected in the soil sample from the boring for well MW-3. Groundwater samples collected from the monitoring wells were found to not contain any petroleum hydrocarbons above the laboratory reporting limit (LRL). On August 27 and 28, 1990, three additional wells (MW-4 through MW-6) were installed onsite. The wells were placed in the east and southeastern portion of the property in what was thought to be the downgradient groundwater flow direction. Wells MW-4, MW-5, and MW-6 were

MOBIL 10-FLN / BP #11196 (Continued) **S116282743**

constructed with a screen interval of 4 to 19 feet bgs. Soils encountered during the investigation varied from a fill material consisting of sand and gravel ranging in depth from 4 to 6 feet bgs overlying clay (CL) ranging in depth from 5 to 18 feet bgs overlying a clayey sand (SC) and sandy clay (CL) ranging in depth from 18 to 20.5 feet bgs. In MW-4, the clayey sand (SC), sandy clay (CL) were underlain by a clay (CL). The total depth explored during this investigation was 20.5 feet bgs. Groundwater was first encountered in the borings at depths ranging from 7 to 8 feet bgs. On September 6, 1990, groundwater samples were collected from all six groundwater monitoring wells (MW-1 through MW-6). The samples were analyzed for total petroleum hydrocarbons as gasoline (TPH-G), total petroleum hydrocarbons as diesel (TPH-D), total oil and grease (TOG), benzene, toluene, ethylbenzene, and xylenes (BTEX), halogenated volatile organic compounds (HVOCs), and total lead. Petroleum hydrocarbons were concentrated in well MW-6 located immediately east of the fuel USTs. TPH-G were detected at 4,800 ppb and TPH-D at 7,500 ppb. The HVOC 1,2-dichloroethane (1,2-DCA) was detected in samples from wells MW-3, MW-4, and MW-5 at concentrations up to 3.5 ppb. TOG was detected in samples from wells MW-1, MW-5, and MW-6 concentrations at up to 14,000 ppb (MW-5). MW-5 is located near the used oil tank in the southern portion of the site. On August 6 and 13, 1991, four monitoring wells (MW-7 through MW-10) were installed around the perimeter of the site. Wells MW-7 through MW-9 were constructed of 4-inch diameter PVC with a screen interval of 4 to 15 feet bgs and well MW-10 was constructed of 2-inch diameter PVC with a screen interval of 3.5 to 16.5 feet bgs. Soils encountered varied from a fill material ranging in depth from 1 to 3 feet bgs underlain by clay (CL) and clayey sand (SC) to the total depth explored of 16.5 feet bgs. Groundwater was first encountered in the borings at depth of approximately 6 feet bgs. On March 24, 2000, two monitoring wells (MW-11 and MW-12) were installed. Well MW-11 was located in what was thought to be downgradient of source areas in the northwest corner of the site and well MW-12 off-site to the north across 19th Avenue. Well MW-11 was constructed with a screen interval of 4 to 19 feet bgs and well MW-12 was constructed with a screen interval of 5 to 20 feet bgs. Soils encountered included silt (ML), clayey silt (ML), sandy silt (ML), silty sand (SM), gravelly sand (SW), and sandy gravel (GW) to a total explored depth of 21.5 feet bgs. Groundwater was first encountered in the borings at depths ranging from 14 to 19.5 feet bgs. Constituents analyzed from soil and water samples collected during the installation of MW-12 showed concentrations below the LRL. On March 14, 1991, HETI conducted a pumping test utilizing the four-inch diameter monitoring well MW-4 located adjacent to the fuel USTs. Well MW-4 is 19 feet deep and screened from 4 to 19 feet bgs. The screened interval is opposite primarily clay with an approximately 4-foot layer of clayey sand. Well MW-4 was selected as the pumping well because it was located in the general center of the dissolved hydrocarbon plume. The pump test duration was approximately eight hours. The well was pumped at a flow rate of 2.9 gallons per minute (gpm). This pumping rate was inconsistent with soil types opposite the well screen (clay and sandy clay) that should have been less than 1 gpm. Drawdown was detected in well well MW-2 (0.23 feet) located approximately 40 feet northeast of the pumping well. Drawdown was not detected in well MW-5 located approximately 50 feet southwest of the pumping well. The hydraulic conductivity value was calculated to range from 49 to 566 gallons per day per foot squared (gpd/ft2)

MOBIL 10-FLN / BP #11196 (Continued) **S116282743**

depending on the analytical method used to evaluate the data. These values convert to 2.81 x 10-3 to 2.67 x 10-2 centimeters per second. These values are typical for clean sand which is inconsistent with the boring log data. The cone of depression was estimated at approximately 90 feet along its long axis. On April 17 and 23, 1991 KEI collected soil samples from product line trenches excavated during routine dispenser modifications; samples P1 through P9, SW1P, SW2P, SW-1 and SW-2. A total of thirteen soil and one groundwater samples were collected. The highest concentrations in soil of petroleum hydrocarbons were reported in a sample from the southern sidewall of the dispenser excavation area (SW2, TPH-G at 4,200 ppm). The highest TPH-G concentration was reported in sample trench sample P4 at 1,800 ppm. The area of sample P4 was over-excavated to a depth of 6 feet where groundwater was encountered. The groundwater sample (W1) contained a concentration of 5,200 ppb TPHG. Site borings (THP-1 through THP-4) were advanced in 1994 as part of a baseline assessment report. Borings were labeled HP-1 through HP-4 on boring logs and figures. Borings were drilled in the northern portion of the site to total depth of approximately 10 feet below ground surface (bgs) in order to explore the upper fine-grained deposits. HP-3 and HP-4 were advanced to 16 and 15 feet bgs, respectively, in order to collect groundwater samples in the lower coarse grained deposits. Soils encountered during this investigation varied from fill materials to depths ranging from 2.5 to 6 feet bgs overlying clayey sand (SC) and sandy clay (CL) ranging in depth from 6.5 to 7.5 feet bgs overlying clay (CL) to the total depth explored of 10 feet bgs. Groundwater was encountered in each boring and a grab water sampled collected from the uncased borehole. TPH-G was detected in boring TPH-1 at a concentration of 6,500 ppb, THP-2 at 110,00 ppb and 85,000 ppb in THP-3. THP-2 and THP-3 were located north of the dispenser islands. The magnitude of these reported grab concentrations is questioned based on historic data. On November 1995, Alisto Engineering Group (Alisto) hand augured borings B-1 through B-3, B-4A, B-4B, B-5A, and B-5B. Borings were completed to depths ranging from 1.5 feet to 5.5 feet bgs in order to collect samples from the near surface fill and clay deposits. Soil types encountered consisted of imported fill (gravel) over native gray silty clay. TPH-G was detected in the 4.5 to 5-foot samples of borings B-2 and B-3 at a concentration of 1,500 milligrams per kilogram (mg/kg). In October 2007, ATC Associates, Inc. (ATC) performed a baseline assessment of the property at the time of a possible real estate transfer. The data reported was not requested or required by a regulatory agency. ATC collected post-purge groundwater samples from MW-1 through MW-9 to generate a baseline assessment of property conditions. Maximum concentrations of TPH-G (130 micrograms per Liter [g/L]) and methyl tertiary-butyl ether (MTBE) (14 g/L) were reported in the samples collected from MW-4 and MW-1, respectively. The maximum concentration of TPH-D (4,000 g/L) was reported in the sample collected from MW-8. Groundwater monitoring has been performed since August 1986 (wells MW-1 through MW-3). Wells MW-1 is screened from 7 feet to 35 feet bgs and MW-2 and MW-3 are screened from 7 feet to 25 feet bgs, MW-4 through MW-6 and MW-11 are screened from 4 feet to 19 feet bgs, MW-7 through MW-9 are screened from 4 feet to 15 feet bgs, MW-10 is screened from 3.5 feet to 16 feet bgs, MW-12 and MW-16 are screened from 5 feet to 20 feet bgs, MW-13 is screened from 9 feet to 19 feet bgs, MW-14 is screened from 6 feet to 20 feet bgs, and MW-15 is screened from 9.5 feet to 19.5 feet bgs. Depth to groundwater in

MOBIL 10-FLN / BP #11196 (Continued) **S116282743**

wells has typically been less than 6 feet below top of casing.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
STATE MASTER
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Site Name:	Safeway 0970
Violation Date:	2/12/2019
Citation:	40 CFR 1 265.174 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.174
Violation Description:	Failure to inspect hazardous waste storage areas at least weekly and look for leaking and deteriorating containers.
Violation Notes:	Returned to compliance on 03/08/2019. Employees reportedly have not completed their log recently. Submit evidence of completion or a procedure now in place to Env. Health within 30 days.
Violation Division:	San Mateo County Environmental Health
Violation Program:	HW
Violation Source:	CERS
Site ID:	63938
Site Name:	Safeway 0970
Violation Date:	2/12/2019
Citation:	40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Description:	Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or

SAFEWAY 0970 (Continued) **S121789570**

	stored in a manner which may rupture the container or cause it to leak.
Violation Notes:	Returned to compliance on 03/08/2019. 4 of the hazardous waste bins observed during the inspection were left open and/or possibly overfilled. These included Corrosive base, toxics, oxidizers, and one unlabeled container. Properly contain waste by having a sufficient number of containers and keeping them closed. Submit evidence of correction to Env. Health within 30 days.
Violation Division:	San Mateo County Environmental Health
Violation Program:	HW
Violation Source:	CERS
Site ID:	63938
Site Name:	Safeway 0970
Violation Date:	1/30/2017
Citation:	40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Description:	Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.
Violation Notes:	Returned to compliance on 02/21/2017. Several containers were completely or partially open and one of aerosols was overfilled. Properly close these containers so that no materials can escape in the event of a tip over.
Violation Division:	San Mateo County Environmental Health
Violation Program:	HW
Violation Source:	CERS
Site ID:	63938
Site Name:	Safeway 0970
Violation Date:	1/30/2017
Citation:	40 CFR 1 265.31 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.31
Violation Description:	Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.
Violation Notes:	Returned to compliance on 02/21/2017. Hazardous waste containers do not appear to be safely stacked for in the event of seismic activity. Provide adequate stacking for proper access to containers and to prevent them from falling over. Store any used fluorescent lamps (like one observed stored next to hazardous waste containers) in a box or container which will prevent it from breaking.
Violation Division:	San Mateo County Environmental Health
Violation Program:	HW
Violation Source:	CERS
Site ID:	63938
Site Name:	Safeway 0970
Violation Date:	2/12/2019
Citation:	40 CFR 1 262.34(d)(5)(ii) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 262.34(d)(5)(ii)
Violation Description:	Failure to post the following information next to the telephone: (A)

SAFEWAY 0970 (Continued) **S121789570**

	The name and telephone number of the emergency coordinator; (B) Location of fire extinguishers and spill control material, and, if present, fire alarm; and (C) The telephone number of the fire department, unless the facility has a direct alarm.
Violation Notes:	Returned to compliance on 03/08/2019. The emergency coordinators phone numbers and location of emergency equipment could not be located in a posting area during the inspection. Complete the posting and provide evidence of correction to Env. Health within 30 days.

Violation Date:	1/30/2017
Citation:	22 CCR 12 66262.23(a)(4) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.23(a)(4)
Violation Description:	Failure to send a legible copy of each hazardous waste manifest to the Department within 30 days of each shipment of hazardous waste.
Violation Notes:	Returned to compliance on 02/21/2017. Facility managers were not clear on who sends a copy of the manifest to the state. Provide an explanation of the procedure that this facility uses to Env. Health within 30 days.

Site ID:	63938
Site Name:	Safeway 0970
Violation Date:	2/12/2019
Citation:	22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description:	Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes:	Returned to compliance on 03/08/2019. Pharmacy: Label for waste medicine updated with physical state and specific contents during the inspection. Each container of corrosive base, toxics, oxidizer, and flammable aerosols was missing the elements of hazardous waste labeling including the name and address of the store, the contents or list of materials contained, physical state, and accumulation start date. Two of the boxes (one with Tide detergent) had no labeling at all. At least one container of detergent was stored outside of a labeled container. One container labeled as flammable aerosols had a container of Woolite Darks (SDS said non-flammable) as well as Lysol. Review all products stored in the hazardous waste container to determine if they are compatible. Then, update all labels. Ensure all products are properly contained, segregated, and labeled with the required labeling elements. Submit evidence of correction to Env. Health within 30 days.

File Location:	All Files are on GeoTracker or in the Local Agency Database
Local Case Number:	110180
Potential Media Affect:	Under Investigation
Potential Contaminants of Concern:	Tetrachloroethylene (PCE), Gasoline
Site History:	The information below is from the 2/6/15 report prepared by Responsible Party's consultant. The San Mateo County Local Oversight Agency makes no representation as to the accuracy of the information. According to a September 2, 1992 file review and work plan submitted by RESNA Industries, Inc., Richfield operated a service station from pre-1940 to 1956 at the property located in the southwest corner of the current parking lot. ARC records indicate the former Richfield service station was operated from 1935 to 1955. In a November 20, 2013 letter, GPP notified ARC that a leaking underground fuel tank case (LUFTcase #110180) has been opened under San Mateo County s Local Oversight Program (LOP) for the site located at 1643 South El Camino in San Mateo, California (Attachment A). Case #110180 was opened based on information obtained during investigation of a nearby 76 Service Station 3294 located at 1626 South El Camino Real. As part of the investigation of 76 Service Station 3294, Applied GeoSystems (AGS) installed offsite well MW-13 at 1643 South El Camino in March and April 1991 (Figure 2). Results from groundwater monitoring and sampling and soil boring grab groundwater samples identified elevated concentrations of gasoline and/or tetrachloroethylene (PCE) in the vicinity of the former Richfield service station property. Based on the assessment results and a historical property review, GPP named ARC as the Primary Responsible Party in accordance with Sections 25297.1 and 25297.15 of the California Health and Safety Code, and directed submittal of a work plan to assess the extent of impact of gasoline and PCE contamination in soil and groundwater beneath the site. In accordance with the GPP November 20, 2013 letter, Stantec submitted a Workplan for Site Assessment dated April 21, 2014.

Site History:	Extracted from CRA's NOVEMBER 19, 2009 CLOSURE REPORT, San Mateo

ART GORDON'S CHEVRON #7863 (Continued) **S103443217**

County does not take responsibility for the accuracy of the statements made or any professional interpretations made in the referenced report. The site is located at the southeast corner of El Camino Real and 20th Avenue in San Mateo, California (Figure 1). The site is currently operating as a Quick Stop Oil Change Service Station. The former Chevron Service Station facilities included a station building, three underground fuel storage tanks (USTs), two dispenser islands, two hydraulic hoists, and a used-oil UST. 1983 UST Removal: In 1983, steel fuel underground storage tanks (USTs) west of the station building were removed. New USTs were installed within the southern portion of the site. December 1992 Investigation: In December 1992, RESNA advanced borings B-1 through B-6 (Figure 2), to evaluate for petroleum hydrocarbons in soil and groundwater in the vicinity of the former and existing USTs. Total petroleum hydrocarbons as gasoline (TPHg) was detected in borings B-2, B-3, and B-4 and the highest concentrations was 150 milligrams per kilogram (mg/kg) in boring B-3 at 11.5 feet below grade (fbg). No benzene was detected in soil. The highest petroleum hydrocarbon concentrations detected in groundwater were 31,000 micrograms per liter (gg/L) TPHg and 2,000 g/L benzene in boring B-4. 1993-1994 UST Removal and Over-Excavation: In November 1993, Golden West Builders demolished the site, including the station building, and removed four USTs (three 10,000-gallon fuel USTs and a 1,000-gallon used-oil UST), fuel product lines, dispenser islands, and two hydraulic hoists. Between November 1993 and May 1994, approximately 2,100 cubic yards of soil were excavated from the site, of which approximately 1,500 cubic yards of soil were transported to a disposal facility. Groundwater was observed at approximately 10.5 fbg during the UST removal activities. Approximately 5,000 gallons of groundwater were pumped from an excavation made in the area of the former used-oil tank, and the water was transported to an appropriate disposal facility. The highest remaining petroleum hydrocarbon concentrations in soil are 3,300 mg/kg TPHg in side wall sample WX-19 and 6 mg/kg benzene in sidewall sample WX-21. The highest concentrations of TPHg and benzene in groundwater were detected in B-4 near the former used oil tank at concentrations of 31,000 gg/L and 2,000 gg/L. July 1995 Investigation: In July 1995, Touchstone drilled borings MW-1, MW-2, MW-3, and B-4 and installed monitoring wells in borings MW-1 through MW-3. Only low concentrations of petroleum hydrocarbons were detected in boring MW-3. 1999-Present Sump Remediation History: In 1999, the City of San Mateo Department of Public Works (CSMDPW) requested that petroleum hydrocarbon-bearing groundwater being discharged from the sump located at 20 East 20th Avenue under CSMDPW Wastewater Discharge Permit #OSB-S be treated prior to discharge. On July 21, 1999, Cambria Environmental Technology, Inc. (Cambria) installed a groundwater treatment system (GWTS). On September 24, 1999, Cambria removed the GWTS after receiving approval from CSMDPW, since concentrations detected in the sump were below discharge concentration limits. Currently, CRA collects required data and submits quarterly compliance sampling reports to the CSMDPW for permit compliance. September 2004 Investigation: On September 23, 2004, Cambria advanced soil borings SB-1 through SB-4, along the eastern property line (Figure 2). Petroleum hydrocarbons were detected in soil from borings SB-1 and SB-3. The highest concentration of TPHg in soil was 370 mg/kg from boring SB-1 at 9 fbg. No benzene was detected in soil. Complete results of this investigation are described in Cambrias March 4, 2005 Subsurface

Investigation Report. 2004 Elevator Construction Dewatering and Soil Disposal: On October 8, 2004, Cambria was notified that hydrocarbon impacted groundwaterwas encountered during elevator-shaft construction activities at 20 East 20th Avenue. Cambrias Soil and Ground Water Management Plan, dated October 9, 2004, was prepared to outline a dewatering protocol and groundwater discharge requirements during the elevator shaft construction. Cambria installed a temporary carbon treatment system at the site to allow treatment of water from the shaft so that the construction activities could continue. Based on totalizer readings, approximately 12,834 gallons of groundwater were pumped from the basement sump between September 2 and December 28, 2004. During each site visit by Cambria personnel, the flow totalizer was cleaned and inspected to verify that it was operating properly. According to Mr. Kurt Soto of Romic Environmental, dewatering operations for the elevator shaft were terminated on January 25, 2005. During the construction of the elevator shaft, 8 cubic yards of soil were excavated and transported for proper disposal at a Chevron-approved facility. No petroleum hydrocarbons were detected in the soil composite sample used to profile the excavated soil for disposal.

Case Type:	Cleanup Program Site
Case Worker:	DGM
Local Agency:	SAN MATEO COUNTY LOP
RB Case Number:	Not reported
File Location:	All Files are on GeoTracker or in the Local Agency Database
Potential Media Affected:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	Tetrachloroethylene (PCE), Trichloroethylene (TCE)
Site History:	November 2002 IVI Environmental Incorporated (IVI) supervised the drilling of Borings SB-1 through SB-4 (later renamed B-1 through B-5) as part of a Phase II investigation. Maximum concentrations of 0.171 mg/kg PCE, 0.0793 mg/kg cis-1,2-Dichloroethene (DCE) and 0.0052 mg/kg Trichloroethene (TCE) were reported in limited soil samples. Additional information is in the report dated 11/21/2002. December 2002 IVI supervised the installation of Monitoring Wells MW-1 through MW-3. Details are in the report dated 3/28/2003. February and March 2003 IVI supervised the drilling of Borings B-5 through B-15, the installation of MW-4 through MW-6 and the collection of groundwater samples from the monitoring wells. PCE concentrations up to 5.429 mg/kg and 3.085 mg/kg were reported in shallow soil near the dry cleaning machine (B-8 at 2 fbg) and soil in the vicinity of the water table (B-5 at 12 fbg). PCE concentrations up to 71.8 ug/l were reported in the monitoring wells; however, the wells were screened below the water table, significantly so for MW-1 through MW-3. Details are in the report dated 3/28/2003. April 2003 IVI supervised the drilling of Borings SV-B3, SV-B5, SV-B7 and SV-B8 for the collection of subsurface soil vapor samples between 1 and 6 fbg. The concentration of PCE in all 5 vapor samples was between 8.6 and 500 ug/l (8,600 and 500,000 ug/m3) and significant vinyl chloride was reported in the vapor sample collected from SV-B3. Additional information is in the report dated 4/18/2003. January 2004 Premier Environmental Services Incorporated supervised the installation of soil vapor extraction wells SVE-16 through SVE-19 and the installation of an SVE system. The SVE system was started on February 14, 2004, and was designed to operate 6 hours/day. Details are in the report dated 9/27/2004. August 2006 Monitoring Well MW-2 was destroyed by pressure grouting. June 2009 Camp Dresser and McKee Incorporated (CDM) supervised the drilling of Borings CDM-SB-1 through SCM-SB-6 for the collection of soil and grab groundwater samples. Trace concentrations of chlorinated solvents were reported in the soil and groundwater samples (most of the grab groundwater samples were collected significantly below the water table). A groundwater sample was also collected from MW-1. Additional information is in the report dated 7/31/2009. March 2010 CDM supervised the destruction of MW-1 and MW-4 via drill-out and the destruction of MW-5 and MW-6 via pressure grouting. April 2010 CDM supervised the collection of sub-slab vapor samples SSG-1 through SSG-10. Details are in the report dated 6/11/2010. October 2010 the SVE system was shut down on 10/28/2010. August 2011 CDM supervised the drilling of membrane interface probe Borings MIP-1 through MIP-7 with cone penetrometer testing (CPT) also performed at MIP-5 through MIP-7. Additional information is in the site investigation and conceptual site model report dated 1/16/2012. December 2012 CDM supervised the drilling of Boring CDM-SB-14 to assess deep soil and groundwater behind the dry cleaner. Details are in the report dated 3/8/2013. December 2015 RRM collected a grab groundwater sample from MW-3 using a passive diffusion bag sampler, installed sub-slab vapor sampling probes RRM-SG-1 through RRM-SG-4 and collected sub-slab

BOREL SQUARE CLEANERS (Continued) **S106966990**

vapor samples. Additional information is in the report 2/24/2016.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Eval Notes: HMBP Last submitted in April 2019. Next submittal is due in April 2020 tkelly@jwmcclenahanco.com The facility currently uses all the chemicals on the inventory sheet, however the storage amounts have been less lately. Tom Kelly stated that he will leave the quantities the same for now incase they store more in the future. I stated that if levels of some of the gases are decreased, the could drop out of the Business Plan Program

Completed Info:

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Voluntary Cleanup Consultation
Completed Date:	08/19/1998
Comments:	DTSC provided review and comment on the lead cleanup levels developed by the City of San Mateo for this redevelopment project. Lead originated from house paint on the houses which we scheduled to be demolished. A cleanup level of 400 parts per million average and 840 ppm maximum for lead was set. DTSC only provided consultatives services on the project.

APN:	NONE SPECIFIED
Past Use:	RESIDENTIAL AREA
Potential COC:	30013
Confirmed COC:	NONE SPECIFIED
Potential Description:	SOIL
Alias Name:	110033615014
Alias Type:	EPA (FRS #)
Alias Name:	201128
Alias Type:	Project Code (Site Code)
Alias Name:	41880001
Alias Type:	Envirostor ID Number

Completed Info:

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Voluntary Cleanup Consultation
Completed Date:	08/19/1998
Comments:	DTSC provided review and comment on the lead cleanup levels developed by the City of San Mateo for this redevelopment project. Lead originated from house paint on the houses which we scheduled to be demolished. A cleanup level of 400 parts per million average and 840 ppm maximum for lead was set. DTSC only provided consultatives services on the project.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	*Voluntary Cleanup Agreement Completion
Completed Date:	04/19/1999
Comments:	Not reported

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Standard Voluntary Agreement
Completed Date:	06/22/1998
Comments:	SIGNED VOLUNTARY CLEANUP AGREEMENT TO PROVIDE CONSULTATION ON PROPOSED LEAD CLEANUP LEVELS FOR RESIDENTIAL USE SCENARIO.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 07/29/2020

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

Data Release Frequency: Varies

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 05/12/2020
Date Data Arrived at EDR: 05/12/2020
Date Made Active in Reports: 07/27/2020

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

UTM Y (Meters):	4156323.0
Elevation:	9 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5640626 SAN MATEO, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

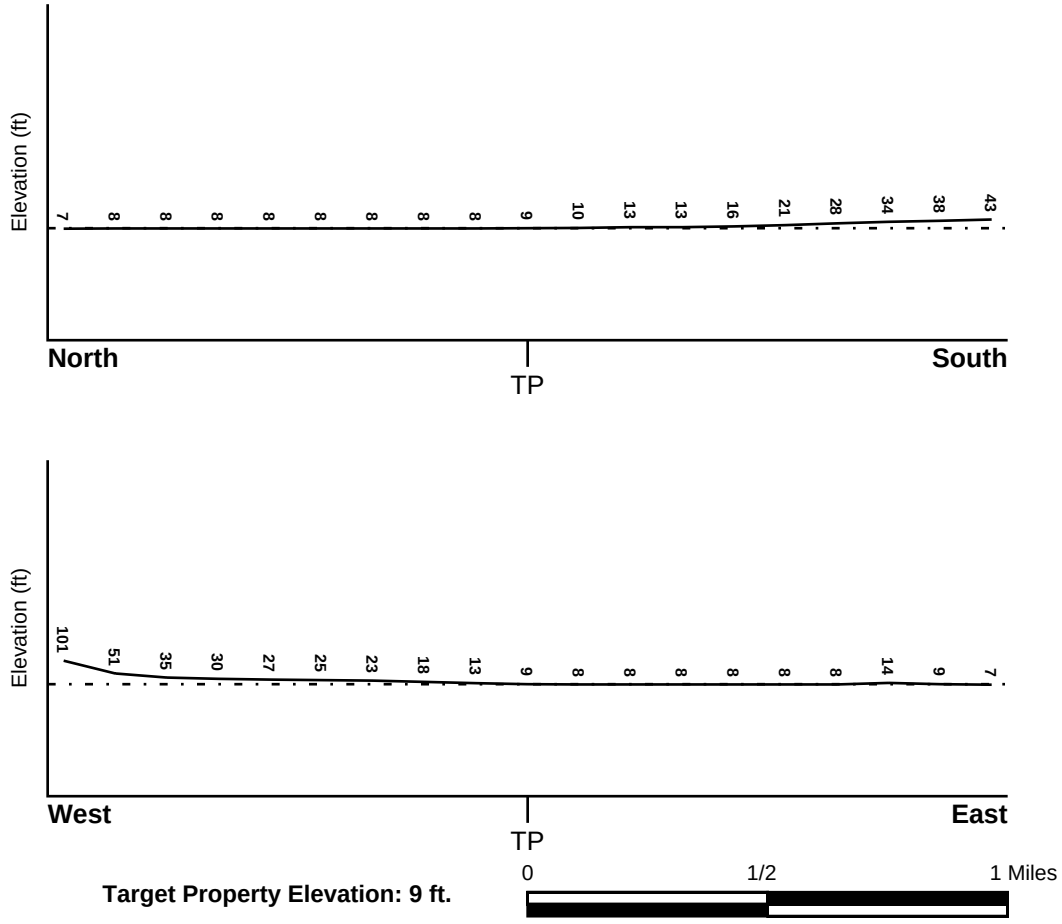
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ENE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06081C0166F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06081C0154F	FEMA FIRM Flood data

06081C0162F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
SAN MATEO	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches		Not reported	Not reported	Max: 0.01 Min: 0	Max: Min:

Soil Map ID: 2

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches		Not reported	Not reported	Max: 0.01 Min: 0	Max: Min:

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

ASTM and EPA Requirements

ASTM E 1527-13 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquires (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

EDR® Environmental Data Resources Inc

BUILDFAX® PROPERTY HISTORY

EXECUTIVE SUMMARY: SEARCH DOCUMENTATION

A search of building department records was conducted by Environmental Data Resources, Inc (EDR) on behalf of WEST on Oct 21, 2020.

TARGET PROPERTY

Concar Drive and S. Delaware Street
San Mateo, CA 94402

SEARCH METHODS

EDR searches available lists for both the Target Property and Surrounding Properties.

RESEARCH SUMMARY

Building permits identified: **YES**

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

ADJOINING PROPERTY DETAIL

The following Adjoining Property addresses were researched for this report. Detailed findings are provided for each address.

CELESTE DR

1750 CELESTE DR

Date:	**6/27/2002**
Permit Type:	
Description:	**SWEEP GRAVEL;OVERLAY 1 COATING W/ PLYURETHANE FOAM & ELASTO-M ATIC TO SFD(3 SQ.)**
Permit Description:	
Work Class:	Repair
Proposed Use:	Single Family Dwelling
Permit Number:	210141
Status:	Issued
Valuation:	$660.00
Contractor Company:	
Contractor Name:	

CONCAR DR

470 CONCAR DR

Date:	**3/3/2017**
Permit Type:	**FS**
Description:	**INTERIOR TENANT IMPROVEMENT OF WARM SHELL SPACE. CONSTRUCTION TO INCLUDE (N) PARTITIONS, FINISHES, LIGHTING, AND EQUIPMENT IN KITCHEN, SERVERY AREA, AND CAFE DINING TOTAL AREA OF WORK: 11,123 SF. FS- Install Fire Sprinkler System (65 heads)- ISSD OTC 3/3/2017**
Permit Description:	**FIRE SPRINKLER**
Work Class:	New, Non Residential
Proposed Use:	Fire Sprinkler
Permit Number:	FS-2017-261630
Status:	Expired
Valuation:	$18,805.00
Contractor Company:	
Contractor Name:	DPR CONSTRUCTION
